Original Report Date: December 21, 2015
Report Revision #: N/A
Revision Date: N/A
Total # of Pages: 274

THIS DOCUMENT MEETS DoD QSM 4.2 STANDARDS

The results relate to only the samples associated with the referenced SDG and the submitted data has been produced in accordance with laboratory procedures. The Laboratory's Technical Lab Director, Mr. Rick Davis, is responsible for the final data produced and reported. His signature is listed at the end of the Case Narrative within the Analytical Data Package. If applicable to this report package, details on report revisions and the information on subcontracted analysis are listed in the package Case Narrative. This report shall not be reproduced, except in full, without the written approval of Empirical Laboratories, LLC.

L-A-B Accredited - Certificate Number L2226 - Testing

Sample Delivery Group Case Narrative

Receipt Information:
The samples were received within the preservation guidelines for the associated methods. The information associated with sample receipt and the Sample Delivery Group (SDG) are included within section 4 of this package, which also provides information on the link between the client sample ID listed on the COC and laboratory's assigned unique sample ID or WorkOrder #. The sample is tracked through the laboratory for all analysis via the assigned WorkOrder #.

All samples that were received were analyzed and none of the samples were placed on hold without analyses. There were no subcontracted analyses for this SDG.

Changes to the Revision:
This is an original submittal of the final report package.

Analytical Information:
All samples were prepped (where applicable) and analyzed within the standard allowed holding times, unless noted within the exceptions listed below. The laboratory analyzed all samples within the program and method guidelines. Sample preparation and dilution information is provided within the final results report and at the beginning of each form set. The following information is provided specific to individual methods:

SW6850:
Note – Samples 1511269-01 (and matrix spikes) (5x) and -08 (10x) were analyzed at the dilutions indicated due to split peaks caused by sample matrix and samples 1511269-07 (50x), -20 (500x), -21 (5x), -22 (1000x), -23 (500x), and -24 (2000x) were analyzed at the dilutions indicated due to high concentrations of target analytes. Samples 1511269-06, -09, -10, -11, -12, -13, -14, -15, -16, -17, and -18 are qualified with a C10 to indicate that the sample was analyzed at the dilutions indicated due to the conductivity of the samples.

The following matrix spikes exceeded criteria:
5L01021-MS1/MSD1 (1511269-01) with a positive bias and exceeded relative percent difference criteria for Perchlorate; note – the associated batch spike is within criteria

The following internal standards exceeded criteria:
Perchlorate-d8 in 5L01021-BLK1; note – with a bias of 14% calculated (164% area with an upper limit of 150%), the Perchlorate concentration would still be below the LOD

No additional anomalies or deviations are noted and the proper data qualifiers have been applied.

Data Qualifiers:

As applicable and where required, the following general qualifiers are associated with the sample results. Additional qualifiers will be specified within the reporting sections of the data package or within the body of the Case Narrative.

Analytical Report Terms and Qualifiers

DL: The detection limit (DL) is defined as the minimum concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero. The DL is supported by the method detection limit (MDL) which is determined from analysis of a sample containing the analyte in a given matrix.

LOD: The Limit of Detection is an estimate of the minimum amount of a substance that an analytical process can reliably detect. An LOD is analyte- and matrix-specific and may be laboratory-dependent. This definition is further clarified in the DoD QSM 4.2 revisions as the smallest amount or concentration of a substance that must be present in a sample in order to be detected at a high level of confidence (99%). At the LOD, the false negative rate (Type II error) is 1%.

LOQ: The Limit of Quantitation is the minimum level, concentration, or quantity of a target variable (e.g., target analyte) that can be reported with a specified degree of confidence. This term is further clarified within the DoD QSM 4.2 as the lowest concentration that produces a quantitative result within specified limits of precision and bias.

*****: Exceeding quality control criteria are associated with the reported result.

B: The presence of a "B" to the right of an analytical value indicates that this compound was also detected in the method blank and the data should be interpreted with caution. One should consider the possibility that the correct sample result might be less than the reported result and, perhaps, zero.

D: When a sample (or sample extract) is rerun diluted because one of the compound concentrations exceeded the highest concentration range for the standard curve, all of the values obtained in the dilution run will be flagged with a "D".

E: The concentration for any compound found which exceeds the highest concentration level on the standard curve for that compound will be flagged with an "E". Usually the sample will be rerun at a dilution to quantitate the flagged compound. For Metals, the qualifier indicates that the serial dilution was outside of the control limits and the compound should be considered estimated due to the presence of interference.

H1: The result was analyzed outside of the EPA recommended holding time.

H2: The result was extracted outside of the EPA recommended holding time.

H3: The sample for this analyte was received outside of the EPA recommended holding time.

J: The presence of a "J" to the right of an analytical result indicates that the reported result is estimated. The mass spectral data pass the identification criteria showing that the compound is present, but the calculated result is less than the LOQ. One should feel confident that the result is greater than zero and less than the LOQ.

M: Indicates that the sample matrix interfered with the quantitation of the analyte. In dual column analysis the result is reported from the column with the lower concentration. In inorganics, it indicates that the parameters DL/LOD/LOQ have been raised.

N: The MS/MSD accuracy and/or precision are outside criteria. The predigested spike recovery is not within control limits for the associated parameter.

P: The associated numerical value is an estimated quantity. There is greater than a 40% difference between the two GC columns for the detected concentrations. The higher of the two values is reported unless matrix interference is obvious or for HPLC analysis where the primary column is reported.

Q: The relative percent difference (RPD) and/or percent recovery exceeded limits in the associated Blank Spike and/or Blank Spike Duplicate.

S: The associated internal standard exceeded criteria.

U: The presence of a "U" indicates that the analyte was analyzed for but was not detected or the concentration of the analyte quantitated below the DL.

X: The parameter shows a potential positive bias on a reported concentration due to an ICV or CCV exceeding the upper control limit on the high side.

Y: The parameter shows a potential negative bias on a reported concentration due to an ICV or CCV exceeding the lower control limit on the low side.

Z: The parameter shows lack of confirmation/detection, which may be due to a negative bias in the ICV or CCV which exceeds the lower control limit.

Chromatographic Flags for Manual Integration:

The following letters are used to denote manual integrations on the laboratory's raw data in association with chromatographic integrations:

A: The peak was manually integrated as it was not integrated in the original chromatogram.

B: The peak was manually integrated due to resolution or coelution issues in the original chromatogram.

C: The peak was manually integrated to correct the baseline from the original chromatogram.

D: The peak was manually integrated to identify the correct peak as the wrong peak was identified in the original chromatogram.

E: The peak was manually integrated to include the entire peak as the original chromatogram only integrated part of the peak.

LIMS Definitions / Naming Conventions:

The following are general naming conventions that are used throughout the laboratory; however, on a method by method basis, there are additional QAQC items that are named in a consistent format.

BLK: LIMS assigns a unique identifier to the Method Blank by naming it as the letters BLK

appended to the Batch ID. A Method Blank is an analyte-free matrix to which all reagents are added in the same volumes or proportions as used in sample processing. The Method Blank is used to assess for possible contamination during preparation and/or analysis steps. Method Blanks within a Batch or Analytical sequence will be appended with a numerical value beginning with 1 that will increase incrementally.

BS: LIMS assigns a unique identifier to the Blank Spike by naming it as the letters BS appended to the Batch ID. The Blank Spike or Lab Control Sample is a controlled analyte-free matrix, which is spiked with known and verified concentrations of target analytes. Spiking concentrations can be referenced in the method SOP. The BS is used to evaluate the viability of analytes taken through the entire prep (when applicable) and analytical process. Blank Spikes within a Batch or Analytical sequence will be appended with a numerical value beginning with 1 that will increase incrementally. A duplicate Blank Spike will be designated as a BSD.

MS: The LIMS assigns each Client sample with a unique identifier. The Matrix Spike is designated with a MS at the end of the sample's unique identifier. The Matrix Spike sample is used to assess the effect of the sample matrix on the precision and accuracy of the results generated using the selected method. A duplicate Matrix Spike will be designated as a MSD.

IDs: The LIMS assigns each Client sample with a unique identifier. The letter "RE" may potentially be appended to the end of the LIMS Sample ID. And "**RE"** implies that the sample was either re-prepped, re-analyzed straight, or re-analyzed at a dilution. Subsequent re-analysis for the sample will be appended with a numerical value beginning with 1 that will increase incrementally. Eg: RE1, RE2, RE3, etc.

Statement of Data Authenticity:

I certify that, based upon my inquiry of those individuals immediately responsible for obtaining the information and to the best of my knowledge, the data package is in compliance with the terms and conditions of the contract, both technically and for completeness, with the exception of the conditions detailed in this Case Narrative, as verified by my signature below. During absences, the Data Quality Manager, Technical Directors or Project Managers are authorized to sign this Statement of Data Authenticity.

Mr. Rick D. Davis
Laboratory Technical Director / VP Operations

COOLER RECEIPT FORM

Cooler Received/Opened On: 11/25/15 @ 0845 Work order# 1511269

1. Tracking # 4496 (last 4 digits, FedEx)

   Courier: FedEx

2. Temperature of rep. sample or temp blank when opened: 0.4 °C + correction factor(+0.4) = 0.8 °C
3. If Item #2 temperature is 0°C or less, was the representative sample or temp blank frozen? YES NO ..NA
4. Were custody seals on outside of cooler? YES..NO...NA

   If yes, how many and where: 1 on front
5. Were the seals intact, signed, and dated correctly? YES...NO...NA
6. Were custody papers inside cooler? YES...NO...NA

   I certify that I opened the cooler and answered questions 1-6 (initial/date) JTG 11/25/15
7. Were custody seals on containers: YES NO and Intact YES...NO...NA

   Were these signed and dated correctly? YES...NO...NA
8. Packing material used? Bubble wrap Plastic bag Peanuts Vermiculite Foam Insert Paper Other None
9. Cooling process: Ice Ice-pack Ice (direct contact) Dry ice Other None
10. Did all containers arrive in good condition (unbroken)? YES..NO...NA
11. Were all container labels complete (#, date, signed, pres., etc)? YES...NO...NA
12. Did all container labels and tags agree with custody papers? YES..NO...NA
13. a. Were VOA vials received? YES..NO..NA

    b. Was there observable headspace present in any VOA vial (>5mm-6mm)? YES...NO...NA
14. Was there a Trip Blank in this cooler (custody seals present/intact)? YES...NO...NA...Comments_____
    If multiple coolers, sequence #_____

    I certify that I unloaded the cooler and answered questions 7-14 (initial/date) TH 11/25/15
15. a. On pres'd bottles, did pH test strips suggest preservation reached the correct pH level? YES...NO...NA TH 11/25/15

    b. Did the bottle labels indicate that the correct preservatives were used? YES...NO...NA
16. Was residual chlorine present? YES...NO...NA

    I certify that I checked for chlorine and pH as per SOP and answered questions 15-16 (initial/date) TH 11/25/15
17. Were custody papers properly filled out (ink, signed, etc)? YES...NO...NA
18. Did you sign the custody papers in the appropriate place? YES...NO...NA
19. Were correct containers used for the analysis requested? YES...NO...NA If not, PM notified? YES...NO...NA
20. Was sufficient amount of sample sent in each container? YES...NO...NA If not, PM notified? YES...NO...NA
21. Were there Non-Conformance issues at login? YES...NO...NCR#_____

I certify that I entered this project into LIMS and answered questions 17-21 (initial/date) TH 11/25/15

I certify that I attached a label with the unique LIMS number to each container (initial/date) TH 11/25/15

I certify that I notified the laboratory of any short holding time or RUSH parameters (initial/date) TH 11/25/15

III. EMPIRICAL LABORATORIES, LLC
DATA ENTRY VERIFICATION FORM – PROJECT MANAGEMENT

Workorder#: 1511269

	Verification Item	Yes	No	NA
1.	**Cooler Receipt Form Issues reviewed and communicated to client**			X
2.	**Element/ Project Screen/items verified to match the COC/CRF:**			
a.	**Client/Project**	X		
b.	Comments requiring laboratory reminder?			X
c.	Client and/or Project Memo requiring laboratory reminder?			X
3.	**Receipt Screen items verified to match the COC/CRF:**			
a.	Received Date/Received By	X		
b.	Workorder Due Date	X		
c.	Package Due Date	X		
d.	TAT	X		
e.	SDG Identifier Populated	X		
4.	**Sample Information verified against COC for each sample:**			
a.	Name	X		
b.	QC Source	X		
c.	Matrix	X		
d.	Sample Type	X		
e.	Sampled Date/Time (Correct Time Zone)	X		
f.	Work Analyses/Versions	X		
g.	Sample Issues included in comments			X
h.	Unpreserved VOA holding time set to 7 days			X
5.	**Containers consistent with tests requested**	X		
6.	**Field data entered and matching COC, if applicable**			X
	I certify that I have performed a second check of the LIMS information against the COC to confirm accuracy (initial/date):	SMG 11/25/2015

SW6850

Laboratory:	Empirical Laboratories, LLC	SDG:	1511269	
Client:	Microbac Laboratories, Inc.-Ohio Valley Division	Project:	Perchlorate	
Calibration:	5317001	Instrument:	LCMS1	
Matrix:	Water	Calibration Dates:	11/11/15 16:29	11/11/15 18:34

Compound	Mean RF	RF RSD	Mean RT	RT RSD	Linear r	Quad COD	LIMIT	Q
Perchlorate	1.178358	4.217321	8.902375	0.124603			20	
Perchlorate (101)	0.3838118	3.56316	8.918625	0.1359902			20	

Per current DoD QSM requirements, effective 03/17/2014, Empirical has updated the linear calibration coefficient requirements to reflect a limit of 0.990 for "r2" rather than the previously reported limit of 0.995 for "r". The change in assessment criteria is consistent with regulatory requirements.

50WW04	Upper Shallow	UG/SG	Dry	Dry	Dry	**Remove from Contaminant Monitoring** – Replaced by 50WW21	VOCs, P
50WW05	Upper Shallow	CP	< 0.20	329	Yes	No Change	VOCs, P
50WW06	Lower Shallow	DGP	1,510	36.1	Yes	CONTINUE MNA monitoring – as well with low perc/low VOC, some DPs, E end of plume	VOCs, P, MNA
50WW07	Upper Shallow	SG	< 0.20	< 0.50	No	**STOP CONTAMINANT MONITORING** - 50WW 24 retained as ND well delineating plume in this direction.	VOCs, P
50WW08	Upper Shallow	UGP	56.3	685	Yes	CONTINUE MNA monitoring – as well with moderate concentrations of both perc and TCE (247), some DPs present, W end of plume	VOCs, P, MNA
50WW09	Lower Shallow	UGP	0.593	19.8	Yes	No Change	VOCs, P
50WW10	Intermediate	UGP	< 0.20	< 0.50	No	INTERMEDIATE ZONE WELL - NO CHANGES	VOCs, P
50WW11	Upper Shallow	CP	22,300	3,550	Yes	CONTINUE MNA monitoring – Most highly impacted well overall. High perc, high VOCs, central plume location	VOCs, P, MNA
50WW12	Upper Shallow	CP	14,300	< 0.50	No	CONTINUE MNA monitoring - as well with high perc/no VOCs, within DG portion of plume	VOCs, P, MNA
50WW13	Upper Shallow	CP	11,700	9,150	Yes	CONTINUE MNA – already monitoring nearby well 50WW 11 with similar TCE, but much higher Perc; watch this well for differences from 50WW 11 that has high levels of both TCE and Perc	VOCs, P, MNA
50WW14	Lower Shallow	CP	5.37	26.7	Yes	CONTINUE MNA – as a lower shallow analog to upper shallow 50WW 06 with mixed contaminants.	VOCs, P, MNA
50WW15	Upper Shallow	SGP	< 0.20	35.4	Yes	No Change	VOCs, P
50WW16	Upper Shallow	DGP	< 0.20	1.05	No	BEGIN MNA - as a well with low TCE/no perchlorate	VOCs, P
50WW17	Shallow	DG	< 0.20	< 0.50	No	No Change	VOCs, P
50WW18	Upper Shallow	DG	< 0.20	< 0.50	No	**STOP MNA Monitoring** – Clean location, Very far down-gradient	VOCs, P, MNA
50WW19	Shallow	DG	< 0.20	< 0.50	No	**STOP CONTAMINANT MONITORING** – clean location, very far down-gradient; 50WW 18 is retained in this area due to position more directly DG of plume.	VOCs, P

Appendix E: Proposed Changes to MNA Groundwater Monitoring Program – LHAAP-50

Well ID	Groundwater Zone	LOC	P Conc* (μg/L)	TCE Conc* (μg/L)	DP	Recommendation for 2nd MNA Monitoring Event	Initial Monitoring Parameters
50WW20	Shallow	SG	< 0.20	< 0.50	No	**STOP CONTAMINANT MONITORING** - 50WW 21 and 50WW 23 are retained as ND wells delineating plume in this direction.	VOCs, P
50WW21	Upper Shallow	SG	0.779	< 0.50	No	No Change	VOCs, P
50WW22	Upper Shallow	UG	1.06	0.339 J	No	CONTINUE MNA – as an upgradient, "unimpacted" reference well	VOCs, P, MNA
50WW23	Upper Shallow	SG	< 0.20	< 0.50	No	CONTINUE MNA – as unimpacted sidegradient well, Outside plume to SE	VOCs, P, MNA
50WW24	Upper Shallow	SG	< 0.20	< 0.50	No	**STOP MNA Monitoring** - Outside plume to SE, 50WW 23 retained in this area	VOCs, P, MNA
50WW25	Lower Shallow	SG	17.8**	< 0.50	No	**STOP MNA Monitoring** - Location is outside plume to NW, substitute with 50WW 16 (low TCE/no perchlorate)	VOCs, P, MNA
50WW26	Lower Shallow	SG	< 0.20	< 0.50	No	**STOP CONTAMINANT MONITORING** - 50WW 21 is retained as the ND well delineating plume in this direction.	VOCs, P
50WW27	Lower Shallow	SGP	< 0.20	< 0.50	Yes	No Change	VOCs, P
50WW28	Upper Shallow	SG	2.01 J	< 0.50	No	**STOP CONTAMINANT MONITORING** Results consistently below detection or MCL	VOCs, P
47WW38	Upper Shallow	SG	860	< 0.50	No	**STOP CONTAMINANT MONITORING** - Does not provide delineation of LHAAP- 50 plumes.	VOCs, P
LHSMW54^	Upper Shallow	DG/SG	< 0.20	112	Yes	**STOP CONTAMINANT MONITORING** - Does not provide delineation of LHAAP- 50 plumes.	VOCs, P

DP - TCE biodegradation daughter products
J - estimated concentration
LOC - location of well relative to source/plume (UG-upgradient, DG-downgradient, SG-sidegradient, CP indicates wells at center of the plume, P indicates the well is within the plume)
MNA - Monitored Natural Attenuation parameters
ND - not detected
P - Perchlorate
VOC - volatile organic compounds
* As of November 2014 sampling event in micrograms per liter (μg/L)
** Perchlorate in 50WW25 is related to a different source from site 47.
^ Samples Collected February 2015, May 2015 and November 2015.

APPENDIX F: Surface Water Sample Collection Forms

Table J1 - LHAAP-50 Rainfall Duration Prior to Sampling GPW-1/GPW-1A

Precipitation Rate (in/hr)	Dry Ground Waiting Time[1] (min)	Wet Ground Waiting Time[2] (min)
0.25	72.0	48.0
0.5	36.0	24.0
0.75	24.0	16.0
1	18.0	12.0
1.2	15.0	10.0
1.5	12.0	8.0
1.7	10.6	7.1
2	9.0	6.0
2.5	7.2	4.8
3	6.0	4.0
4	4.5	3.0
6	3.0	2.0
8	2.3	1.5

[1]Utilize when ground surface is dry to the touch; **not** wetted by prior rainfall.

[2]Utilize when ground surface is wet to the touch; wetted by prior rainfall.

[1,2]Waiting Time begins when precipitation begins falling at designated rate.

Table J2 - LHAAP-50 Runoff Curves

	AMCII	AMCIII
CN	71	85.2
S	4.08	1.74 in
I_a	0.20	0.09 in

Expected Rainfall (in)	Runoff with Previously Dry Soil (in)	Runoff with Previously Wet Soil (in)
0.1	0.0000	0.0001
0.2	0.0000	0.0069
0.3	0.0022	0.0233
0.4	0.0090	0.0478
0.5	0.0200	0.0794
0.6	0.0350	0.1170
0.7	0.0537	0.1600
0.8	0.0758	0.2076
0.9	0.1013	0.2593
1	0.1298	0.3146
1.1	0.1611	0.3732
1.2	0.1952	0.4347
1.3	0.2318	0.4988
1.4	0.2708	0.5653
1.5	0.3121	0.6339
1.6	0.3555	0.7044
1.7	0.4009	0.7767
1.8	0.4483	0.8506
1.9	0.4975	0.9260
2	0.5484	1.0027

Assumes Soil Type C and ungrazed Bahia Grass pasture

Dry Soil Runoff (in) = (Expected Rainfall (in) - AMCII I_a) ^2 / Expected Rainfall (in) - AMCII I_a + AMCII S

Wet Soil Runoff (in) = (Expected Rainfall (in) - AMCIII I_a)^2 / Expected Rainfall (in) - AMCIII I_a + AMCIII S

AMCII I_a - initial abstraction (amount of soil moisture prior to rainfall event); antecedant moisture condition - average soil moisture

AMCII S - potential maximum soil moisture (retention before runoff begins); antecedent moisture condition - average soil moisture

AMCIII I_a - initial abstraction (amount of soil moisture prior to rainfall event); antecedent moisture condition- moist soil

AMCIII S - potential maximum soil moisture (retention before runoff begins); antecedent moisture condition - moist soil

CN - Natural Resources Conservation Service Runoff Curve Number

AMC - Antecedent Moisture Condition

Subject: **Final Minutes, Monthly Managers' Meeting, Longhorn Army Ammunition Plant (LHAAP)**

Location of Meeting: **Teleconference – 888-369-1427, Passcode 4887611**
Date of Meeting: **November 17, 2016 – 10:00 AM**

Attendees:

Army BRAC:	Rose Zeiler (RMZ)
AEC:	Nick Smith (NS)
EPA:	Rich Mayer (RM), Kent Becher (KB) (USGS Liaison)
TCEQ:	April Palmie (AP)
AECOM:	Debra Richmann (DR), Elspeth Sharp (ES), JoLynn Snow (JS), Scott Beesinger (Aerotek subcontractor to AECOM)
USFWS:	Paul Bruckwicki (PB)

Welcome **RMZ**

Action Items
AECOM

- Distribute a replacement page for the Final LHAAP-47 PSI Work Plan that documents the protocol for determining if and after how much elapsed time a monitoring well boring may be considered a dry hole and can be abandoned. **In Progress** - The criteria were agreed to by the Army, EPA, and TCEQ; RMZ will provide the language for AECOM to use in the replacement page.
- Make arrangements for removal and disposal of a roll-off box containing IDW at LHAAP-67. **In Progress.**
- Determine if ponded water west of LHAAP-18/24 and north of LHAAP-17 is from runoff of irrigation water from LHAAP-18/24. **Complete -** RM confirmed the location of the ponding is immediately north of LHAAP-17. DR, RM RMZ, PB, and SB discussed photos provided as attachments to the agenda. SB indicated that this area is regularly ponded and has been since he started working at the LHAAP GWTP in 1997, so predates injection and irrigation of treated wastewater. RMZ said that based on historical reports, elevated perchlorate levels also predate injection and irrigation activities and prompted installation of the FBR at the GWTP. AP asked if the vegetation in the area is consistent with regular ponding, because from the photos, it doesn't look like typical marsh vegetation. RMZ said she couldn't speak to that, however she indicated that data exist for sediment samples collected along the drainages around Site LHAAP-17. RMZ also suggested that EPA/TCEQ can follow up with SB if they would like more information.

Army

- Army to discuss what to do with the existing temporary piezometer at LHAAP-47, located near monitoring well 47WW25. **To Be Discussed at December MMM**.
- RMZ to provide language concerning the criteria for determining if a boring intended for monitoring well installation should or should not be completed as a well. This language will be provided to AECOM to incorporate as a replacement page for the LHAAP-47 PSI Work Plan.

EPA

- KB and RM to further discuss the EPA comment on the LHAAP-29 RI Addendum concerning the unknown transport mechanism by which MC from the source area (soak out area near monitoring well 29WW16) migrated to the present location of DNAPL. The intent was to revise the comment to propose specific language to be included in the RI Addendum to close out the issue. **In Progress -** RM said they had a call with Army after the last MMM to discuss. RM voiced EPA's concern that there is some unknown source to the west of the DNAPL plume where there is more sand, less clay to impede path to the intermediate zone. RMZ will draft text to be included as a replacement page in the LHAAP-29 RI Addendum.
- RM to verify if RA-O sites are to be included in the schedule being prepared by the Army. **Complete –** RM spoke to his manager and confirmed the RA-O sites should be included in the schedule.

TCEQ

- No outstanding action items.

AEC

- No outstanding action items.

USFWS

- AW had requested a resource management plan for LHAAP (INRMP) to provide as GFI with the RFP for the follow-on PBR. PB was not aware of one. KB, RMZ said they have the EA, which would include a Finding of No Significant Impact (FONSI). **Complete.**

Defense Environmental Restoration Program (DERP) PBR Update AECOM

DR asked everyone to refer to the Document and Issue Tracker dated 11/17/16, which was distributed with the agenda. It includes currently projected dates for submittal of remaining project milestone deliverables to EPA and TCEQ.

- Item 1 (GWTP Quarterly Report) – Responses to regulatory agency comments on the Q4 2015 report were incorporated into the Q1 2016 GWTP report, which was submitted to EPA and TCEQ on 11/7/16.

- Item 2 (Revised Updated LHAAP-18/24 PSI Addendum) – Comments on the Draft Supplemental to the Updated PSI Addendum were received from TCEQ comments on 10/17/16 and from EPA on 11/3/16. AP mentioned schedule concerns about providing the final document as an appendix to the Final Revised FS, and suggested it might be better provided as a stand-alone document. RMZ said it would make sense, but AP then pointed out the FS already has all the Appendix B references that would need to be changed. RMZ indicated she would discuss both options with AW and decide. RM indicated EPA has no preference.

- Item 2-1 (LHAAP-18/24 Data Gap Sampling) - Complete.

- Item 2-2 (Previous Regulatory Comments on LHAAP-18/24 FS) – The RTCs are complete. However, they were not included in the draft revised FS submitted to EPA and TCEQ (they were provided as separate files). It was agreed the draft would not be revised and re-sent

now, but for the final revised FS, the RTCs will be included in the electronic and paper copies immediately after the cover page.

- Item 2-3 (LHAAP-18/24 Revised FS) – Received TCEQ comments on draft final revised FS on 11/16/16. RMZ, AP, RM and DR discussed TCEQ comments 2, 7 and 9. For comments 2 and 7, all agreed that monitoring wells MW-20 and 18CPTMW22R are both screened in a small perched unit above the potentiometric surface of the Shallow Zone and groundwater elevations in these wells will not be used when Figure 1-6 is revised. The text will also be revised accordingly. RMZ discussed historical perchlorate data and indicated perchlorate contamination in the Shallow Zone was present long before irrigation at the site commenced. For comment 9, RMZ said that the Army intends to maintain the cap on the UEP until conditions change and its protectiveness is in question. For instance, if the treatment system failed or if the groundwater level were to rise such that the waste under the cap was in the saturated zone, the soil removal option would be re-evaluated as a contingency option. AP, RM, and RMZ agreed the response to comment 9 would be re-worded to address soil removal as a contingency remedy, rather than being "deferred".

- Item 3-1 (LHAAP-37 RACR) – The Final RACR will be entered into the AR. RM said the Certificate of Completion letter is being held until the groundwater returns to its pre-test condition.

- Items 4 (LHAAP-46 RACR), 5 (LHAAP-50 RACR), 6 (LHAAP-58 RACR) - Complete.

- Item 7 (LHAAP-67 RACR) –The RACR became final on 8/20/16 and all that's left is for it to be entered into the AR.

- Item 8 (LHAAP-12 2015 Annual Report) – The Final LHAAP-12 2012 and 2015 Annual Reports will be entered into the AR with the Q3 2016 update.

- Item 8-1 (LHAAP-12 2016 RA-O Report) – Validated data package will be submitted to TCEQ and EPA.

- Item 9 (LHAAP-46 Yr. 2 RA-O Report) – Complete.

- Item 10-1 (LHAAP-67 Yr. 1 RA-O Report) – DR said the report is planned for submittal to EPA and TCEQ the week of 11/21/2016.

- Item 10-2 (LHAAP-67 Yr. 2 RA-O Report) – Same as Item 10-1.

- Item 11-1 (LHAAP-50 Yr. 1 RA-O) – DR said the electronic files for the Draft Final Year 1 report had just been submitted to TCEQ and EPA in the morning (11/17/16).

- Item 11-2 (LHAAP-50 Yr. 2 RA-O) – DR said the electronic files for the Draft Final Year 2 report would be submitted to EPA and TCEQ later in the day (11/17/16).

- Item 12-1 (LHAAP-58 RA-O) – Complete.

- Item 12-2 (LHAAP-58 Contingency Remedial Action Work Plan) – The Final LHAAP-58 Contingency RAWP will be entered into the AR with the Q3 2016 AR update. The implementation of the contingency plan remedy is being deferred to the next PBR contract.

- Item 13 (MMM) – DR said the Draft October 2016 MMM minutes were submitted to EPA and TCEQ on 11/7/16. One minor comment was received from TCEQ on 11/16/16. KB said he would review the minutes on behalf of EPA since RM participated by phone and was not to hear much of the discussion. The next MMM meeting will be held at 10:00 CST on Thursday 12/15/16 by teleconference.

- Item 14-1 (LHAAP-29 RI Addendum) – Complete.

- Item 14-2 (LHAAP-29 FS Addendum) – DR said work has continued on the FS Addendum and the expected date for submittal of the Draft FS Addendum to the regulators is still TBD.

- Item 15-1 (LHAAP-47 PSI Work Plan) – After AECOM receives and incorporates the replacement page with criteria for determining when a boring will be completed as a monitoring well or abandoned, based on the amount of water in the boring, the Final PSI Work Plan will be entered the Q3 2016 AR Update.

- Item 15-2 (LHAAP-16 RD) – The Draft RD was submitted to EPA and TCEQ on 10/12/2016. Comments were received from EPA on 11/15/16 and from TCEQ on 11/16/16. RTCs are due to EPA and TCEQ by 12/16/16.

- Item 15-2a (LHAAP-16 RD Post ROD Requirements) – The Army will provide the draft initial notice of contamination and LUCs to TCEQ and EPA for review prior to issuing the notice to Federal/State/Local entities and owner/occupants no later than 12/12/16.

- Items 15-3 (LHAAP-17 RD) – The Army is deferring this item to the next PBR contract.

- Item 15-3a (LHAAP-17 PDI WP) – The Draft Final PDI Work Plan is being revised to respond to EPA and TCEQ comments and will be submitted for the agency records later in the month.

- Item 15-3b (LHAAP-17 Post-ROD Requirements) – Similar to LHAAP-16, the Army will be providing the initial notice of contamination and LUCs to Federal/State/Local officials and owner/occupants by 12/12/16.

- Item 15-4 (LHAAP-001-R-01 RD/RDWP) – The LUC RD is being deferred to the follow-on PBR contract.

- Item 15-4a (LHAAP-001-R-01 Limited LTM) – The first of three rounds of annual groundwater samples were collected 9/29/2016. Data will be validated prior to 12/1/2016.

- Item 15-4b (LHAAP-001-R-01 Post-ROD Requirements) – Similar to LHAAP-16, the Army will be providing the initial notice of contamination and LUCs to Federal/State/Local officials and owner/occupants by 12/12/16.

- Item 15-5 (LHAAP-003-R-01 RD/RDWP) – The LUC RD is being deferred to the follow-on PBR contract.

- Item 15-5a (LHAAP-003-R-01 Limited LTM) – DR stated that only one round of groundwater samples is required by the ROD and they were collected 9/29/2016. All wells except 18WW16, which gets sampled during LHAAP-18/24 monitoring events, were redeveloped prior to sampling. Data will be validated prior to 12/1/2016.

- Item 15-5b (LHAAP-003-R-01 Post-ROD Requirements) – Similarly to LHAAP-16, the Army will be providing the initial notice of contamination and LUCs to Federal/State/Local officials and owner/occupants by 12/12/16.

- Item 15-6 (LHAAP-04 ROD) – The Army submitted the Draft Final ROD to EPA and TCEQ on 10/7/2016. Army submitted RTCs for EPA comments on the Draft Final ROD on 11/4/16.

- Item 15-7 (Site-wide LUC Management Plan) – The Army submitted the FY2016 Revision Log to EPA and TCEQ for electronic signature on 10/17/2016. Three copies were provided to KB so that EPA can sign and return copies to Army and to TCEQ. The signatures were all in place by 10/25/16.

- Item 16 (RAB/Website) – Held last quarterly RAB meeting on October 20th from 6:00-7:30 pm at the Karnack Community Center. Updated website with date/time of next RAB meeting (1/19/17) and approved July 2016 RAB meeting minutes on 10/31/16. The next RAB meeting will be at the Karnack Community Center on 1/19/17 beginning at 6:00 pm.

- Item 17-1 (GWTP O&M – GWTP Sampling and Optimization Memo) and Item 17-2 (GWTP Sampling and Analysis Plan) – AECOM submitted responses to comments on the Optimization Memo and the revised SAP to EPA and TCEQ on 11/10/16. The GWTP Sampling and Analysis Plan is scheduled to be finalized prior to 12/1/2016.

- Item 17-3 (GWTP Continuing O&M) – GWTP O&M continues.

- Item 18 (Admin. Record Update) – The Q2 2016 AR update was uploaded to the LHAAP website on 10/13/2016, and CDs were provided the week of 10/17/2016. The 2016 AR Q3 update currently in preparation.

- Item 19 (LHAAP-02) – The third round of semi-annual sampling was performed the week of 10/3/16. The Army directed AECOM to prepare a Tech Memo covering the first year (two rounds) of semi-annual sampling (10/15/15 and 4/29/16), which was provided to TCEQ and EPA on 10/27/16. RMZ said there is a figure showing the site and sampling locations as requested by TCEQ in the ROD. The results from the third round of sampling will be provided in a validated data package only (no annual tech memo/report). RMZ said the Army is not requesting EPA and TCEQ to review these data at this time.

- Item 20 (LHAAP-37 Geochemical Rebound) – Results for the first round of sampling were provided groundwater sampling results in the September 2016 validated data package distributed at the October 2016 MMM. Additional quarterly sampling is suspended because

the site groundwater has not adequately rebounded; future sampling will be conducted under the follow-on PBR contract.

- Item 21 (Smart Map) – AECOM continues to develop the Smart Map.

MMRP Update **Army**

- No update.

Other Environmental Restoration **Army**

- Quarterly Reporting and Requirements
  - GWTP Evaluation
  - Surface Water/Perimeter Well Quarterly Update
  - Administrative Record Update
  - Website Update
- Annual Reporting
  - LUC Management Plan Update (due September 2016)
  - CRP/CIP Revision (Biennial) – NS commented that revision of the plan will be funded under the new AEC contract.

USFWS Update **RMZ/PB**

- No update.

Schedule Next Managers' Meeting

- The December 2016 MMM will be held by teleconference at 10:00 CST on 12/15/16.

Adjourn

Attachments:

- **October 2016 Validated LHAAP Data:**
  - GWTP Effluent: Weekly, Bi-weekly, and Monthly Sampling (September/October 2016)
  - GWTP Influent: Monthly (September 2016)
  - LHAAP-001-R Groundwater Sampling (September 2016)
  - LHAAP-003-R Groundwater Sampling (September 2016)
- Photos of ponded water west of LHAAP-18/24 and north of LHAAP-17

Photo # 7 - Ditch line exiting LHAAP-18/24 on the southwest side, which is dry.

Subject: **Final Minutes, Monthly Managers' Meeting, Longhorn Army Ammunition Plant (LHAAP)**

Location of Meeting: **Teleconference – 888-369-1427, Passcode 4887611**
Date of Meeting: **December 15, 2016 – 10:00 AM**

Attendees:

Army BRAC: Rose Zeiler (RMZ)
EPA: Rich Mayer (RM), Barry Forsythe (BF)
TCEQ: April Palmie (AP)
USACE: Aaron Williams (AW)
AECOM: Elspeth Sharp (ES), Debra Richmann (DR), JoLynn Snow (JS)

Welcome **RMZ**

Action Items
AECOM

- Replacement page for the Final LHAAP-47 PSI Work Plan. **Complete –** The replacement page was distributed on 12/14/16. RMZ went over the procedure that will be observed going forward to ensure a DPT boring intended for groundwater grab sampling is not abandoned prematurely due to smearing of clay during DPT advancement that retards groundwater flow into the borehole. AP and RM confirmed that the procedure is as they had agreed to and accepted the replacement page.
- Make arrangements for removal and disposal of a roll-off box containing IDW at LHAAP-67. **In Progress –** DR said AECOM submitted waste profiles for the roll-offs containing IDW at LHAAP-67, as well as at LHAAP-18/24 and LHAAP-37, using the same template that the landfill accepted in March, but this time the landfill rejected the profiles. AECOM was told the landfill needs more information on the processes generating the waste. The project geologist, Glenn Hilton (GH), will continue to work with the landfill to develop waste profiles that are acceptable to the facility.
- Determine if ponded water west of LHAAP-18/24 and north of LHAAP-17 is from runoff of irrigation water from LHAAP-18/24. **Complete –** RM confirmed that the ponding north of LHAAP-17 discussed during the November MMM is the area he observed and was interested in with respect to the source of the ponded water. There was some further discussion of the type of vegetation in the general area not looking like typical marsh or wetland vegetation. However, the group agreed that historical evidence demonstrates that ponding occurred in this area well before irrigation and past injection of treated groundwater first occurred at LHAAP-18/24, so natural sources of the water must be involved. The group agreed that this item is resolved.

Army

- RMZ discussed what to do with temporary piezometer at LHAAP-47 (near 47WW25). RMZ asked the group if they are ok with it remaining in place until the PSI is implemented under the next PBR contract. The group agreed, however, AECOM was given the action item to have Scott Beesinger (SB) visually confirm the piezometer is capped.

EPA

- Replacement page for the LHAAP-29 RI Addendum. **Complete** - Specific language was developed by the Army, and EPA and TCEQ concurrence was received on 12/7/16. Electronic copies of the replacement page were submitted to EPA and TCEQ on 12/14/16.
- RM verified RA-O sites are to be included in the schedule prepared by the Army. **Complete** – RMZ said that the Army will provide their schedule to EPA sometime after Christmas.

TCEQ

- No outstanding action items.

AEC

- No outstanding action items.

USFWS

- No outstanding action items.

Schedule Review **RMZ**

- Restoration – RMZ indicated a draft schedule will be provided after the first of the year (2017). AP and RM said that the last day they would be in their offices before the holidays is 12/22.
- Contract – AW said the RFP for the next PBR will be released after the holidays and that pending documents need to be finalized before release. AW, RM, AP and DR agreed that review and approval of the LHAAP-18/24 Revised FS is the top priority. AM said that EPA has only one outstanding issue concerning groundwater mounding at the site. DR indicated that the LHAAP Annual GWTP Evaluation Report for 2004 was emailed to RM and AP on 12/14/16; the document contains monthly groundwater surface potentiometric surface maps for 2004 that document the presence of mounding throughout that year. AW also sent copies of correspondence between the Army, TCEQ, and EPA to RM and AP concerning discharge of treated groundwater by irrigation, including a letter from TCEQ concurring with the recommendations for discharge presented in a memo from GWTP operator. Next priority is the LHAAP-16 RD. RMZ said the Army and AECOM are working to resolve some inconsistencies in the draft RD, and AW added that they will be having a call to discuss the LHAAP-16 RD with AECOM later today (12/15/16). AP said that for the remaining pending documents, TCEQ and EPA request they receive the RTCs and revised redline documents together, to make them easier to review. For the Draft Final LHAAP-18/24 Revised FS, the RTCs were sent separately, and the revised redline document has not been submitted yet.

Programmatic Issues **RMZ/RM/AP**

Defense Environmental Restoration Program (DERP) PBR Update **AECOM**

DR asked everyone to refer to the Document and Issue Tracker dated 12/15/16, which was distributed with the agenda. It includes currently projected dates for submittal of remaining project milestone deliverables to EPA and TCEQ.

- Item 1 (GWTP Quarterly Report) – Responses to agency comments on the Q4 2015 report were incorporated into the Q1 2016 GWTP report, which was submitted to EPA and TCEQ on 11/7/16.

- Item 2 (Revised Updated LHAAP-18/24 PSI Addendum) – JS indicated that the Draft Final Revised Updated LHAAP-18/24 PSI Addendum redline and RTCs are planned for submittal to EPA and TCEQ later today (12/15/16) or tomorrow.

- Item 2-1 (LHAAP-18/24 Data Gap Sampling) - Complete.

- Item 2-2 (Previous Regulatory Comments on LHAAP-18/24 FS) –During a conference call on 12/14/16 with EPA and TCEQ, EPA accepted all responses to their previous comments on the old FS except comment 21. RM said he would review the groundwater surface maps in the 2004 annual GWTP evaluation report provided by the Army and would provide EPA's final response by 12/16/16.

- Item 2-3 (LHAAP-18/24 Revised FS) – During the conference call on 12/14/16 to review RTCs for EPA's previous comments on the old FS, RTCs for TCEQ and EPA comments on the Draft Revised FS were also discussed. EPA and TCEQ accepted all responses except EPA comment 21. RM said he provide EPA's final response by 12/16/16.

- Item 3-1 (LHAAP-37 RACR) – The Final RACR has been entered into the AR. RM said the Certificate of Completion letter is being held until the groundwater returns to its pre-test condition.

- Items 4 (LHAAP-46 RACR), 5 (LHAAP-50 RACR), 6 (LHAAP-58 RACR), 7 (LHAAP-67 RACR), 8 (LHAAP-12 2015 Annual Report) - Complete. Items 7 and 8 were entered into the Administrative Record.

- Item 8-1 (LHAAP-12 2016 RA-O Report) – Annual groundwater samples for 2016 are collected in December. Only a validated data package will be submitted to TCEQ and EPA for December 2016 sampling event; no evaluation report will be provided.

- Item 9 (LHAAP-46 Yr. 2 RA-O Report) – Complete.

- Item 9-1 (LHAAP-46 Yr. 3 RA-O Report) – Submittal of the Draft Yr. 3 RA-O report to EPA and TCEQ is pending a decision from the Army.

- Item 10-1 (LHAAP-67 Yr. 1 RA-O Report) and Item 10-2 (LHAAP-67 Yr. 2. RA-O Report) – Comments on the Year 1 and Year 2 draft reports were received from EPA on 12/1/16 and from TCEQ on 12/6/16. RTCs are in preparation.

- Item 10-3 (LHAAP-67 Yr. 3 RA-O Report) - Submittal of the Draft Yr. 3 RA-O report to EPA and TCEQ is pending a decision from the Army.

- Item 11-1 (LHAAP-50 Yr. 1 RA-O) – DR said the Draft Final Yr. 1 report and RTCs received EPA approval without further comments on 12/12/16 and TCEQ approval was received that morning (12/15/16). This item is complete except for entering the Draft Final report and concurrence emails into the next AR update.

- Item 11-2 (LHAAP-50 Yr. 2 RA-O) – DR said the Draft Final Yr. 2 report and RTCs received EPA approval without further comments on 12/13/16 and TCEQ submitted one additional comment on 12/15/16. AP said the comment was to revise one figure using a

more current set of data. She suggested the comment could be addressed with a replacement page.

- Item 12-1 (LHAAP-58 RA-O) – Complete.

- Item 12-2 (LHAAP-58 Contingency Remedial Action Work Plan) – This item is complete except for entering the Final LHAAP-58 Contingency RAWP into the next AR update.

- Item 13 (MMM) – Draft October 2016 MMM minutes were finalized and will be entered into the next Admin Record update. Draft minutes from the November 2016 MMM to be submitted to TCEQ and EPA for review the week of 12/12/16. The next MMM meeting will be held at 10:00 CST on Thursday 1/19/17 at the LHAAP Army trailer.

- Item 14-1 (LHAAP-29 RI Addendum) – Complete.

- Item 14-2 (LHAAP-29 FS Addendum) – DR said a date for submittal of the Draft FS Addendum to the regulators is still TBD. Submittal of the Draft FS Addendum to EPA and TCEQ is pending a decision from the Army. AP and RM agreed it would be good to get this reviewed and approved by the agencies under the current contract, if possible.

- Item 15-1 (LHAAP-47 PSI Work Plan) – Submitted Draft Final to EPA and TCEQ on 12/14/16. The submittal included the agreed to replacement language concerning criteria for determining when/if a DPT boring intended for grab groundwater sampling can be abandoned due to inadequate volume of groundwater.

- Item 15-2 (LHAAP-16 RD) – The Draft RD was submitted to EPA and TCEQ on 10/12/2016. Comments were received from EPA on 11/15/16 and from TCEQ on 11/16/16. RTCs are due to EPA and TCEQ by 12/16/16.

- Item 15-2a (LHAAP-16 RD Post ROD Requirements) – DR said the initial LUC notice was sent to Federal/State/Local entities and owner/occupants on 12/8/16. Complete.

- Items 15-3 (LHAAP-17 RD) – The Army is deferring the RD to the next PBR contract.

- Item 15-3a (LHAAP-17 PDI WP) – Draft Final PDI Work Plan was submitted to EPA and TCEQ for their records on 11/29/16. Received email from RM confirming EPA approval as final on 12/14/16 and TCEQ acceptance on 12/15/16.

- Item 15-3b (LHAAP-17 Post-ROD Requirements) – DR said the initial LUC notice was sent to Federal/State/Local entities and owner/occupants on 12/8/16. Complete.

- Item 15-4 (LHAAP-001-R-01 RD/RDWP) – The Army is deferring the LUC RD to the follow-on PBR contract.

- Item 15-4a (LHAAP-001-R-01 Limited LTM) – The first of three rounds of annual groundwater samples was collected on 9/29/2016. Validated results were distributed in the Validated Data Package for the November 2016 MMM. Complete.

- Item 15-4b (LHAAP-001-R-01 Post-ROD Requirements) – DR said the initial LUC notice was sent to Federal/State/Local entities and owner/occupants on 12/8/16. Complete.

- Item 15-5 (LHAAP-003-R-01 RD/RDWP) – The Army is deferring the LUC RD to the follow-on PBR contract.

- Item 15-5a (LHAAP-003-R-01 Limited LTM) – DR stated that only one round of groundwater samples is required by the ROD and it was collected on 9/29/2016. All wells except 18WW16, which gets sampled during LHAAP-18/24 monitoring events, were redeveloped prior to sampling. Validated results were distributed in the Validated Data Package for the November 2016 MMM.

- Item 15-5b (LHAAP-003-R-01 Post-ROD Requirements) – DR said the initial LUC notice was sent to Federal/State/Local entities and owner/occupants on 12/8/16. Complete.

- Item 15-6 (LHAAP-04 ROD) – The Army submitted the Draft Final ROD to EPA and TCEQ on 10/7/2016. Army submitted RTCs for EPA comments on the Draft Final ROD on 11/4/16. The ROD and RTCs have been approved and the Army is just waiting for final signatures.

- Item 15-7 (Site-wide LUC Management Plan) – The FY2016 Revision Log and signed transmittal letters will be entered into the next Admin Record update.

- Item 16 (RAB/Website) –DR said the LHAAP website was updated with the date/time of next RAB meeting (1/19/17 from 6:00 – 7:30 pm) and approved July 2016 RAB meeting minutes on 10/31/16. The next RAB meeting will be at the Karnack Community Center. Draft minutes from the October RAB meeting will be submitted to the RAB members for review prior to the December meeting.

- Item 17-1 (GWTP O&M – GWTP Sampling and Optimization Memo) and Item 17-2 (GWTP Sampling and Analysis Plan) – AECOM submitted responses to comments on the Optimization Memo and the revised SAP to EPA and TCEQ on 11/10/16. Received TCEQ comments and marked up Table 2-1 on 12/12/16; held a conference call in the afternoon to review them together. During the MMM, AP indicated that for effluent sampling, a bi-weekly frequency would miss some of the excursions. She recommended that in the revised Table 2-1 for the updated SAP, weekly sampling, as is currently performed, should be retained. She also said that a specific statement should be included for perchlorate, because the FBR performance has been variable. She acknowledged that this would be conditional language, because new discharge limits will be established, and may be higher than current limits, thus alleviating some of the problems with perchlorate in the effluent. RTCs will be submitted in January 2017.

- Item 17-3 (GWTP Continuing O&M) – GWTP O&M is ongoing and will continue under the current PBR for the entire contract POP (through 9/30/17).

- Item 18 (Admin. Record Update) – The Q3 2016 AR update was uploaded to the LHAAP website on 12/14/16, and CDs will be provided later in the week. The 2016 AR Q4 update currently in preparation.

- Item 19 (LHAAP-02) – The third round of semi-annual sampling was performed the week of 10/3/16. The Army directed AECOM to prepare a Tech Memo covering the first year (two rounds) of semi-annual sampling (10/15/15 and 4/29/16), which was provided to TCEQ and EPA on 10/27/16. On 11/17/16, AP requested a figure showing the site and sampling locations. The requested figure was provided to AP and RM on 12/13/16. Received TCEQ approval on 12/15/16.

- Item 20 (LHAAP-37 Geochemical Rebound) – Results for the first round of sampling were provided groundwater sampling results in the September 2016 validated data package distributed at the October 2016 MMM. Additional quarterly sampling is suspended because the site groundwater has not adequately rebounded; future sampling will be conducted under the follow-on PBR contract. AECOM is currently preparing a tech memo to document the results of the September 2016 and previous sampling for MNA parameters. DR indicated the draft should be completed and submitted for Army review shortly after the holidays.

- Item 21 (Smart Map) – AECOM continues to develop the Smart Map. JS said that discussions with the Smart Map developers concerning how to transfer the site to the follow-on PBR contractor are ongoing. She also indicated a teleconference with the Army should be scheduled to discuss the details for the transfer.

November 2016 Validated LHAAP Data Package
DR and JS discussed a possibly mislabeled GWTP sample in November Validated Data Package. The sample for metals in what is currently identified as an influent sample is believed to be mislabeled and should probably be identified as an effluent sample. JS is consulting with the metals lab manager and will send a revised data package if the suspected error is confirmed.

MMRP Update **Army**

- Groundwater Tech Memo for LHAAP-003-R
    - DR discussed the perchlorate results, indicating that perchlorate was non-detect in two of the three wells samples, and was well below the TRRP Tier 1 Groundwater Residential PCL in the third well.
- Groundwater results for two sites
    - DR said that no perchlorate was detected in any of the six wells sampled at LHAAP-001-R in November 2016.

Other Environmental Restoration **Army**

- Quarterly Reporting and Requirements
    - GWTP Evaluation
    - Surface Water/Perimeter Well Quarterly Update
    - Administrative Record Update
    - Website Update
- Annual Reporting
    - LUC Management Plan Update - Signed Revision Log and transmittal letters will be entered into the 2016 Q4 AR update.
    - CRP/CIP Revision (Biennial) – A question was asked about the indicated biennial frequency of the CRP/CIP revision. RMZ indicated it should be revised next year and AW said it will be included in the next PBR PWS.

USFWS Update **RMZ/PB**

Schedule Next Managers' Meeting

- The January 2017 MMM will be held at the Army trailer at LHAAP on 1/19/17, at 10:00AM CST.

Adjourn

Attachments:

- **November 2016 Validated LHAAP Data:**
  - GWTP Effluent: Weekly and Bi-weekly Sampling (October 2016)
  - GWTP Influent: Monthly (October 2016)
  - LHAAP-02: Semi-annual Sampling (October 2016)
  - LHAAP-58: Semi-annual MNA Sampling (October 2016)

Blue Highlighting Indicates concentrations above the MCL/PCL

Some samples may have been diluted due to the concentration(s) of one or more analytes exceeding the upper limit of the calibration curve.

Metals results for "FF" samples are dissolved.

J - Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.

MCL - Maximum Contaminant Limit

mg/L - milligrams per liter

NA - not analyzed

PCL – Texas Risk Reduction Program (TRRP) Tier 1 Groundwater Residential Protective Concentration Level

U - Undetected: The analyte was analyzed for, but not detected.

UJ - The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

ug/L - micrograms per liter

Blue Highlighting Indicates concentrations above the MCL/PCL

Some samples may have been diluted due to the concentration(s) of one or more analytes exceeding the upper limit of the calibration curve.

Metals results for "FF" samples are dissolved.

J - Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.

MCL - Maximum Contaminant Limit

mg/L - milligrams per liter

NA - not analyzed

PCL – Texas Risk Reduction Program (TRRP) Tier 1 Groundwater Residential Protective Concentration Level

U - Undetected: The analyte was analyzed for, but not detected.

UJ - The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

ug/L - micrograms per liter

Blue Highlighting Indicates concentrations above the MCL/PCL

Some samples may have been diluted due to the concentration(s) of one or more analytes exceeding the upper limit of the calibration curve.

Metals results for "FF" samples are dissolved.

J - Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.

MCL - Maximum Contaminant Limit

mg/L - milligrams per liter

NA - not analyzed

PCL – Texas Risk Reduction Program (TRRP) Tier 1 Groundwater Residential Protective Concentration Level

U - Undetected: The analyte was analyzed for, but not detected.

UJ - The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

ug/L - micrograms per liter

LHAAP-58 Semi-Annual MNA Sampling - October 2016

Blue Highlighting Indicates concentrations above the MCL/PCL

Some samples may have been diluted due to the concentration(s) of one or more analytes exceeding the upper limit of the calibration curve.

Metals results for "FF" samples are dissolved.

J - Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.

MCL - Maximum Contaminant Limit

mg/L - milligrams per liter

NA - not analyzed

PCL – Texas Risk Reduction Program (TRRP) Tier 1 Groundwater Residential Protective Concentration Level

U - Undetected: The analyte was analyzed for, but not detected.

UJ - The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

ug/L - micrograms per liter

Re: Draft Final Supplemental to the Updated Post-Screening Investigation Report for LHAAP-18/24, Burning Ground No. 3 and Unlined Evaporation Pond
Longhorn Army Ammunition Plant, Karnack, Texas

Dear Mr. Mayer,

The above-referenced document is being transmitted to you for your records and includes revisions based upon your comments on the Draft. In accordance with the FFA, the Draft Final will be considered Final after 30 days without further comment.

The document was prepared by AECOM on behalf of the Army as part of AECOMôs Performance Based Remediation contract for the facility. I ask that Debra Richmann, AECOMôs Project Manager, be copied on any communications related to the project.

The point of contact for this action is the undersigned. I may be contacted at 479-635-0110, or by email at rose.m.zeiler.civ@mail.mil.

Sincerely,

Rose M. Zeiler, Ph.D.
Longhorn AAP Site Manager

Respondent: Marwan Salameh and Debra Richmann, AECOM

1. Respondent Concurs (C), Does Not Concur (D), Takes Exception (E), or Delete (X).
2. Commentor Agrees (A) with response, or Does not Agree (D) with response.

Comment #	Page	Section/ Paragraph	Comment	C, D, E or X[1]	Response	A or D[2]
1	viii	Third Paragraph	The text states ñThe elevated concentrations of perchlorate may represent perchlorate migrating via groundwater to this location prior to installation of the groundwater extraction system.ò EPA recommends adding that injection and irrigation has affected the groundwater flow paths on the site and there is potential for migration of the perchlorate around and below the ICT system.	E	Elevated levels of perchlorate in groundwater were present before irrigation and/or injection occurred. For example, perchlorate concentrations in nearby wells MW-7 and MW-8 were 105,000 Õg/L and 27,500 Õg/L, respectively, in May 2005; 89,400 Õg/L and 47,500 Õg/L in 2006; 37,500 Õg/L and 72,000 Õg/L in May 2013; and 22,000 Õg/L and 8,290 Õg/L in June 2016. The data demonstrate that perchlorate contamination was present before installation of the extraction system and there has been a decrease in perchlorate concentrations as a result of the operation of the groundwater extraction system. The text on page viii has been modified to incorporate these examples.	
2	vii	Delineation of Contaminated Soil	EPA recommends a statement in the paragraph that the MSC standard was used for the vadose zone soil. There were a couple of concentrations that exceeded the 7,200 mg/kg MSC, but appear to be in a saturated zone.	C	Text was added to page viii to specify vadose zone and saturated zone perchlorate concentrations were compared to the GWP-Ind MSC of 7,200 Õg/kg.	
3		Figure 1-4	Is the southwest corner known to be LHAAP-39? If not, please remove label from figures.	C	The LHAAP-39 label was removed from figures throughout the report.	
4	3-1	Section 3.1.1, 1st Paragraph	Text indicates VOCs concentrations were mostly nondetects. Please note when EPA observed sampling of cores the sampling team often left cores out in the sun for long periods of time before collecting VOC samples from the core. During one observation, the VOC sample was not collected until almost a half hour after core extraction. EPA recommends that for further sampling the VOCs need to be collected as soon as possible and to use an EnCore sampling method to prevent loss of VOCs in soils during sampling.	C/E	Agree, the samples observed by EPA were not collected in accordance with the SOP Subsurface Soil Sampling by Split Spoon and Continuous Split Barrel Samplers from the IWWP (AECOM, 2014). This SOP states in Section 5.3.5 that to limit the possible loss of volatiles, the soil sample should be obtained as quickly as possible from the sampler. This is the protocol that is normally followed and future samples will be collected in accordance with this SOP.

1. Respondent Concurs (C), Does Not Concur (D), Takes Exception (E), or Delete (X).
2. Commentor Agrees (A) with response, or Does not Agree (D) with response.

Comment #	Page	Section/ Paragraph	Comment	C, D, E or X[1]	Response	A or D[2]
5	3-4	Section 3.2	EPA recommends adding an explanation on why well 18WW25 was not sampled.	E	Well 18WW25 was sampled and the results are presented in the report. The text was corrected to remove the incorrect statements that 18WW25 was not sampled in Section 3.2 and on page ix.	
6	3-4	Section 3.2.1, First Paragraph	Well MW-20 is known to be in a perched zone. The new well 18CPTMW22R appears to also be completed in that small perched zone. EPA recommends not using these wells for groundwater level contouring.	C	Section 3.2.1 text and Figure 3-1 were revised to indicate groundwater at wells MW-20 and 18CPTMW22R is perched.	
7	3-4	Section 3.2.1	How were elevations determined at the new wells since earlier in the text it is mentioned that the wells have not been surveyed?	E	The wells were surveyed. The text of Section 2.3 has been updated to include the surveying results.	
8	3-6	Top of Page	EPA agrees that the lateral extend of the perchlorate in the upper Wilcox is delineated. However vertical extend of perchlorate is not known in the northwest (1 location) and northeast corners (1 location) of the site. EPA assumes additional wells will be drilled in the future to determine vertical extend in these areas.	C	Text was added at the top of page 3-6 (Section 3.2.2.1) that provides information about the lack of vertical delineation at MW-14 and 18CPTMW08DW.	
9	3-6	Section 3.2.2.2, First Paragraph	EPA agrees for the most part that the TCE in the shallow zone is delineated; however, MW-18 to the west had a detection of 14.1 which is still above the MCL. EPA recommends mentioning this detection in text. Newly planned activities at LHAAP-17 may help delineate the plume (just a little further to the west). One note, figure 2-2 in the LHAAP-17 report shows a 2009 sample collected at MW-18 and it was a nondetect. The recent result may indicate that the TCE plume is expanding.	C/D	Text was added to Section 3.2.2.2, Section 4.1, and page X discussing detection of TCE in MW-18. TCE has been detected historically in MW-18 above the MCL/PCL. Examples include 100 µg/L in May 2000 and 17 µg/L in December 1996. Therefore, we do not believe the TCE plume is necessarily expanding in this area.

2. Commentor Agrees (A) with response, or Does not Agree (D) with response.

Comment #	Page	Section/ Paragraph	Comment	C, D, E or X[1]	Response	A or D[2]
10	3-7	First Paragraph	Please define PCL in text and add to acronym list.	C/D	Added definition of PCL in the text in Section 3.2.2.4. PCL and TRRP are included and defined in the acronym list.	
11		Table 3-4	Please update table 3-3 with new well elevations, since it appears this table contains the data needed.	C	Table 3-3 was updated with surveying data.	
12	4-2	Number 13	Please see comment 9 above.	C	Please see response to comment 9.	
13	4-3	Second Bullet	This sentence seems awkward. One can say that these areas do not appear to be a source of perchlorate for Site 17. EPA assumes the intent might be that perchlorate is not migrating via the groundwater towards Site 17. Additional investigations at Site 17 may determine if there are comingling plumes from the two sites.	C/D	The intent of the second bullet is that perchlorate is not migrating via groundwater to site 17 from 18/24. We do not believe there are commingled plumes from site 17 and site 18/24 because perchlorate concentrations in 18CPTMW26, 18CPTMW26SW, and 18DP08 located between the two sites were very low or non-detectable. Text was added to the second bullet to clarify the sentence.	
14	4-3	Fourth Bullet	EPA agrees that the lateral extent of the COCs is mostly defined. However, the vertical extent has not been determined in few locations (i.e. MW-14 and 18CPTMW08DW).	C	Text added to the fourth bullet that indicates where delineation is not complete.	
15	4-3	Fifth Bullet	EPA recommends deleting this bullet. The previous bullet makes the same statement.	C	The fifth bullet removed from Section 4.2.

Comment #	Page	Section/ Paragraph	Comment	C, D, E or X[1]	Response	A or D[2]
1		18CPTMW22 Replacement pages	This log is really difficult to get meaningful information out of. The log should be redone from scratch. A note could be included to indicate the log replaces previous version in the other report.	C	A new log was created that shows the correct well construction information with a note that clarifies the new log is a revision. The original log will remain included for recordkeeping purposes, but an ñXò is put through the log to make it clear the log is no longer valid.	
2		Relevant to that log	Could you also please revise the cross section from the other PSI report for D-Dô to indicate the actual screen interval from 18CPTMW22. It would be very helpful to also include the 18CPTMW22 well logs (SW and DW) in this cross section. A note could be included to indicate the cross-section replaces previous version in the other report.	C	Cross-section D-Dô is updated by correcting the well screen for 18CPTMW22 and adding logs for 18CPTM22SW/DW. A new Section 3.3 was added to the report referencing cross-section D-Dô and indicating that it replaces a previous version in the Updated PSI report (Feb 2016).	
3	1-3	Section 3.2.1 Groundwater elevation discussion	It is my understanding that the new wells were not surveyed at the time of writing. This narrative should include notes to indicate interpretation could change based on survey elevations, especially when discussing slight upward or downward gradients.	E	All new wells were surveyed. Section 2.3 has been updated by providing survey information for the new wells and borings. Accordingly, no changes are needed for Section 3.2.1.	
4		All relevant figures (groundwater potentiometric) and Table 3-4	Should have notes regarding new wells not surveyed.	E	Please see response to comment #3.	
5		Figure 3-1	MW-20 and 18CPTMW22R have comparable groundwater elevations. It is still relevant to discard MW-20 as a data point? If so, shouldnôt the new well also be discarded?	C	Section 3.2.1 text and Figure 3-1 were revised to indicate groundwater at wells MW-20 and 18CPTMW22R is perched, and groundwater elevations in MW-20 and 18CPTMW22R were not used in contouring the Shallow Zone groundwater surface.

Subject: RE: LHAAP-18/24 Draft Final Supplemental PSI Addendum Report

Good afternoon April,

Please see the attached pages you requested showing the red X's. The link below is to the full PDF with lab data with these pages showing the X's as well, in case you need it for your files. I will enter this file in the Admin Record once we receive acceptance as Final from you and Rich. Please let me know if you need anything else.

JoLynn Snow has sent you 1 file using AECOM's File Transfer System.

This file will be available for download until 1/30/2017

Subject: EPA Approval of the Longhorn Site 18/24 Draft Final Supplemental PSI Addendum Report

Good Morning JoLynn/Rose, I've reviewed the Draft Final Supplemental PSI Addendum Report for Longhorn Site 18/24 and accept all edits and comment responses. Thank you for fixing Section 3.2. Also, EPA highly recommends that the EnCore sampling method be implemented during the next contracting period (for VOCs in soil).

EXECUTIVE SUMMARY

This Supplemental to the Updated Post-Screening Investigation (PSI) Report was prepared on behalf of the United States (U.S.) Army Corps of Engineers (USACE) for sites LHAAP-18 (Burning Ground No. 3) and LHAAP-24 (Unlined Evaporation Pond [UEP]/Rocket Motor Washout Facility) at the former Longhorn Army Ammunition Plant (LHAAP) in Karnack, Texas. The purpose of this report is to summarize the results of the environmental investigations conducted at LHAAP-18/24 by AECOM Technical Services, Inc. (AECOM) between February 2016 and June 2016. This information will be used to fill data gaps identified in the Updated Post-Screening Investigation (PSI) Report for LHAAP-18/24 (AECOM, 2016), to respond to comments from the U.S. Environmental Protection Agency (USEPA) and the Texas Commission on Environmental Quality (TCEQ) on the PSI report, and to complete a Revised Feasibility Study (FS) for LHAAP-18/24 that includes evaluation of contingency remedies for 1,4-dioxane.

The investigation work and the information presented in this report are based on the LHAAP-18/24 Supplemental PSI Work Plan (WP) (AECOM, 2015) that was developed by AECOM on behalf of the U.S. Department of the Army (U.S. Army). The WP was reviewed by and concurrence was received from the TCEQ and the USEPA.

Background

LHAAP-18/24 is a 34.5 acre fenced, cleared area located in the southeastern section of LHAAP. The area was used for the treatment, storage, and disposal of solid and liquid explosive, pyrotechnic, and combustible solvent waste by open burning/open detonation, incineration, evaporation, and burial. Burning Ground No. 3 operated between 1955 and 1998. Historical waste management units include open burn pits, the UEP, stockpiles of solvent-soaked sawdust, an air curtain destructor (ACD), and suspected waste burial pits. A groundwater extraction system incorporating approximately 5,000 feet (ft) of interceptor-collection trenches (ICTs) and a groundwater treatment plant (GWTP) was installed in 1997 to control the migration of contaminated groundwater. The area within the ICTs is considered the containment area.

Field Investigation Scope of Work

The purpose of this investigation was to provide better definition of the presence and extent of contamination in soil and groundwater within specific areas of the site, as discussed below.

The following specific objectives were identified for this work:

- Assess the extent of the potential perchlorate source in the southern corner of the site
    - Determine the presence and extent of a potential perchlorate source in the Shallow Zone soil and groundwater in the vicinity of MW-7 extending south toward 18CPTMW22SW.
    - Determine if perchlorate in Shallow Zone groundwater extends from LHAAP-18/24 to LHAAP-17 in the southern part of LHAAP-18/24.
- Delineate perchlorate in specific groundwater areas where data gaps were identified in the Updated PSI report (AECOM, 2016). These areas include the southern portion of the site near 18CPTMW22SW; the northwest area in the vicinity of 18CPTMW23 and near Harrison Bayou; and in proximity to 18CPTMW19.

To achieve these objectives, vertical soil profiling of perchlorate and volatile organic compound (VOC) concentrations was conducted utilizing direct push technology (DPT), sonic, and hollow stem auger (HSA) drilling methods to recover soil cores. Soil samples from each soil boring were obtained at approximately 10 foot intervals from the ground surface to borehole terminus. Lateral extent of contamination in the Shallow Zone was also determined from the samples collected from the DPT borings.

Delineation of Contaminated Soil

The scope of work included advancing DPT borings and collecting soil samples from up to 30 soil borings as deep as 45 ft below ground surface (bgs) in the southern corner of the site in proximity of MW-7 and 18CPTMW22SW. Five initial soil borings were advanced around 18CPTMW22SW, which is the location of known high perchlorate concentrations in the saturated soil and groundwater. Based on the analytical results from the initial borings, step out borings were advanced at progressively greater distances from the impacted initial soil borings until concentrations of perchlorate and VOCs were below levels protective of groundwater GWP-Ind Medium Specifc Concentration (MSC) of 7,200 micrograms per kilogram (Õg/kg) for perchlorate and 100 times the Maximum Contaminant Level (MCL) for VOCs. The GWP-Ind MSC for perchlorate was used for both saturated and vadose zone soil samples. Using this approach for delineating the lateral extent of contamination, a total of 17 shallow soil borings were advanced and sampled.

Shallow Zone Groundwater Monitoring Wells

The scope of work for Shallow Zone groundwater included the following activities:

- Installation of a 4-inch diameter monitoring well to replace former monitoring well 18CPTMW22, including vertical soil profiling for perchlorate and VOCs in the Shallow Zone and Wilcox clay.
- Installation of a 4-inch diameter monitoring well approximately 250 ft west/southwest of former monitoring well 18CPTMW22 for delineation of perchlorate extent in the direction of LHAAP-17. Vertical soil profiling for perchlorate and VOCs in the Shallow Zone and Wilcox clay was also performed.
- Installation of a 4-inch diameter monitoring well approximately 100 ft north of monitoring well 18CPTMW23 for delineation of perchlorate extent toward Harrison Bayou. Vertical soil profiling for perchlorate and VOCs in the Shallow Zone formation and Wilcox clay was also performed.

Wilcox Formation Groundwater Monitoring Wells

The scope of work for Wilcox Formation groundwater included the following activities:

- Installation of a deep Wilcox 4-inch diameter monitoring well in proximity of monitoring well 18CPTMW22SW, and vertical soil profiling for perchlorate and VOCs in the Wilcox Clay and Wilcox Formation.
- Installation of a 4-inch monitoring well adjacent to monitoring well 18CPTMW23 for lateral and vertical perchlorate and VOCs delineation in the Wilcox Formation. The work included completion of vertical soil profiling for perchlorate and VOCs in the Shallow

Zone and upper Wilcox Formation. This well was installed deeper than 18CPTMW23 in a clean soil interval in the Wilcox Formation.

- Installation of an upper Wilcox 4-inch diameter monitoring well approximately 100 ft north of monitoring well 18CPTMW08SW and adjacent to 18CPTMW19 for vertical and lateral delineation of perchlorate and VOCs. Vertical soil profiling for perchlorate and VOCs in the Wilcox Formation was also performed.
- Installation of an upper Wilcox 4-inch diameter monitoring well approximately 250 ft west/southwest of former monitoring well 18CPTMW22 for perchlorate delineation toward LHAAP-17. Vertical soil profiling for perchlorate and VOCs (combined with the Shallow Zone soil profiling discussed above) into the upper Wilcox Formation.

The Revised Updated PSI Addendum field investigation was initiated using a DPT rig between February 22 and March 15, 2016 for perchlorate assessment in the Shallow Zone of the southern portion of the site. Between April 18, 2016 and June 27, 2016, seven additional monitoring wells were installed, four of which are located in the southern portion as part of the perchlorate assessment. Three of the monitoring wells, 18CPTMW23SW, 18WW24, and 18CPTMW19SW, were installed on the north side of the site beyond the containment area to complete the delineation of perchlorate in this area of the site.

Seventeen shallow soil borings were advanced using DPT in the southern corner of the site for perchlorate delineation, soil characterization, and soil sampling. In this report, the Shallow Zone is defined as the unsaturated and saturated soil from the ground surface to a depth of up to 45 ft bgs, which typically overlies a clay layer (identified as the Wilcox clay) that separates the Shallow Zone (alluvial deposits) from groundwater in the Wilcox Formation.

Three monitoring wells were installed in the Shallow Zone to an approximate depth of 35 ft bgs, three wells were installed in the Intermediate Zone to an approximate depth of 65 ft bgs, and one well was installed in the Deep Zone to an approximate depth of 90 ft bgs. Six of the borings for the monitoring wells were drilled using sonic drilling techniques and one shallow well boring was drilled using an HSA drill rig. The shallow wells were completed in the Shallow Zone groundwater. The intermediate wells were completed in the upper Wilcox and the deep well was completed in the lower Wilcox.

Temporary steel surface casing was used to isolate the deeper groundwater (Intermediate and Deep Zones) from the Shallow Zone groundwater to reduce the potential for cross contamination. Discrete soil samples were obtained from the monitoring well boreholes at intervals up to approximately 10 ft for vertical profiling of perchlorate and VOCs.

Field Investigation Findings

Southern Corner of Site

High perchlorate concentrations were identified in the Shallow Zone and upper Wilcox Formation in wells 18CPTMW22 and 18CPTMW22SW in the area just outside the southern corner of the site; however, the source of this perchlorate is unknown. Therefore, this additional soil investigation in the southern corner of the site was conducted to further determine the presence and source of perchlorate in this area of the site. Eighty-five discrete soil samples from 17 DPT soil borings were collected in the Shallow Zone. In addition, 25 discrete soil samples (12

from the Shallow Zone and 13 from the Wilcox Formation) were obtained from the boreholes of four monitoring wells outside the southern corner of the site.

The perchlorate concentrations in the vadose zone in the six DPT boreholes collected inside the containment area in the southern portion of the site revealed low to nondetectable concentrations of perchlorate, with the highest concentration found in 18DPT04 at 5-5.5 ft bgs at 101 Õg/kg, located adjacent to the former building X-25. These perchlorate concentrations are less than the GWP-Ind MSC of 7,200 Õg/kg used for the vadose zone soil. In the saturated zone inside the containment area, the concentration of perchlorate was elevated particularly in the Wilcox clay. The highest concentration of perchlorate in the Wilcox Clay was detected in 18DPT04 at 36.5-37.0 ft bgs at 3,200 Õg/kg. These perchlorate concentrations however are still less than the GWP-Ind MSC of 7,200 Õg/kg, which was used for perchlorate in saturated soil. Therefore, there is no particular source of perchlorate identified in the Shallow Zone (vadose and saturated) in this area of the site.

Outside the southern corner of the site, the concentration of perchlorate in the vadose zone ranged from low (5.53 Õg/kg) to nondetect. The low to nondetectable concentrations of perchlorate in the vadose zone would indicate that perchlorate is not sourced from a surface release in this area.

In the saturated Shallow Zone, the concentrations of perchlorate were typically low increasing in depth the closer the samples were to the Wilcox clay. The higher concentrations of perchlorate in the shallow saturated zone were detected in 18DPT03 (3,290 Õg/kg at 14.5-15 ft bgs) , 18DPT15 (3,440 Õg/kg at 21-21.5 ft bgs), and 18DPT11 (3,940 Õg/kg at 20-20.5 ft bgs). These concentrations of perchlorate were found in the coarser materials (sand) just above the Wilcox clay. The highest perchlorate concentrations in the Wilcox clay were detected above the GWP-Ind MSC of 7,200 Õg/kg in the borehole of monitoring well 18CPTMW22DW at 9,440 Õg/kg at 29.5-30 ft bgs and in 18DPT12 at 15,900 Õg/kg at 18-18.5 ft bgs. These samples were collected from saturated soils. The elevated concentrations of perchlorate in the Wilcox clay may represent perchlorate migrating via groundwater to this location prior to installation of the groundwater extraction system. For example, perchlorate concentrations in nearby wells MW-7 and MW-8 were 105,000 Õg/L and 27,500 Õg/L, respectively, in May 2005; 89,400 Õg/L, and 47,500 Õg/L in 2006; 37,500 Õg/L and 72,000 Õg/L in May 2013; and 22,000 Õg/L and 8,290 Õg/L in June 2016. These data demonstrate that perchlorate contamination was present before installation of the extraction system and there has been a decrease in perchlorate concentrations as a result of the operation of the groundwater extraction system.

Perchlorate concentrations for the 18CPTMW22 stepout borings were considerably lower or nondetect. Therefore, using a perchlorate GWP-Ind MSC of 7,200 Õg/kg for industrial land use scenario, these low or nondetect perchlorate concentrations provide delineation of extent of perchlorate in the vadose and saturated zones of the Shallow Zone and indicate that a source does not exist in this area of the site.

Data Gaps Northwest of the Containment Area

Other locations where data gaps were identified include northwest of the site in proximity to 18CPTMW19, in proximity to 18CPTMW23, and farther to the northwest from 18CPTMW23 adjacent to Harrison Bayou. To address the data gaps identified at these locations, soil samples from the following boreholes were analyzed to delineate the perchlorate impact:

- 18CPTMW19SW – perchlorate concentrations were below the detection limits at 5-5.5 ft bgs and 10-10.5 ft bgs. At 20-20.5 ft bgs 8.74 µg/kg was detected followed by no detections at 30-30.5 ft bgs. At 40-40.5 and 50-50.5 perchlorate was detected at 124 µg/kg and 170 µg/kg, followed by no detections at 60-61 ft bgs. Saturation at this location was encountered at approximately 10 ft bgs. The Wilcox clay appears to extend from 20.3 ft bgs to 41.4 ft bgs.
- 18CPTMW23SW – relatively low concentrations of perchlorate were detected at 5-5.5 ft bgs, 10-10.5 ft bgs and 20-20.5 ft bgs at 19.6 µg/kg, 1,920 µg/kg, and 29.3 µg/kg, respectively. At depths of 30-30.4 ft bgs, 40-40.5 ft bgs, 50-50.5 ft bgs, and 60-60.5 ft bgs perchlorate concentrations were below the detection limits. Saturated conditions were observed at the surface and throughout the borehole as the area had previously been subjected to flooding due to heavy rains. The Wilcox clay was not identified at this location.
- 18WW25 near Harrison Bayou – no perchlorate was detected in any of the analyzed soil samples at 3.5-4 ft bgs 9.5-10 ft bgs 14.5-15 ft bgs, 19.5-20 ft bgs, 22-22.5 ft bgs. Saturation at this location was encountered at approximately 2 ft bgs during drilling. The Wilcox clay was not identified.

Groundwater Results

A comprehensive sampling event for groundwater was conducted in June 2016 after the monitoring wells were installed. A comprehensive groundwater level gauging event was conducted on June 9, 2016, except for monitoring well 18WW25, which was not installed until June 27, 2016, after the gauging event (well 18WW25 was however sampled on June 29, 2016 and analyzed for COCs). The Shallow Zone groundwater potentiometric results indicate the presence of a localized groundwater high in the northern portion of the site near monitoring wells AWD-1 and 123, as has been observed historically. The new monitoring well 18CPTMW22R, just outside the containment area to the south of the site, indicated the presence of a groundwater high. The Wilcox Formation potentiometric results indicate the presence of a groundwater high in the vicinity of MW-14 in the northwest area of the site, consistent with previous observations.

Shallow Zone monitoring well 18CPTMW26 had insufficient amount of water and was not sampled. Shallow Zone monitoring well 18CPTMW22R to the south of the site, which is screened between 4.8 ft bgs and 14.3 ft bgs, had a perchlorate concentration of 0.917 µg/L. The low perchlorate concentration in the groundwater corroborates the < 2.8 µg/kg of perchlorate in the soil samples collected at this location to a depth of 15.5 ft bgs. This low perchlorate result in 18CPTMW22R contrasts with the high perchlorate concentration in plugged Shallow Zone well 18CPTMW22, which had perchlorate of 106,000 µg/L in June 2014. Shallow Zone well 18CPTMW22 was screened between 19 and 28 ft bgs through a highly impacted Wilcox clay zone. Soil samples from 18CPTMW22DW drilled in April 2016 indicated the presence of perchlorate at 5,400 µg/kg at a depth of 20 to 20.5 ft bgs. Soil samples collected from 18CPTMW22SW had perchlorate concentrations of 10,600 µg/kg at a depth of 24 ft bgs and 10,200 µg/kg at a depth of 26.5 ft bgs. These high concentrations of perchlorate in soil across the screened interval of 18CPTMW22 coincide with the high groundwater perchlorate concentration reported in plugged well 18CPTMW22.

Perchlorate was not detected in new Shallow Zone monitoring well 18WW25 near Harrison Bayou to the northwest. Similarly, no detections of 1,4-dioxane (< 1 μg/L), TCE (< 0.5 μg/L), or MC (< 0.5 μg/L) were observed in this well. No detections of 1,4-dioxane (< 1 μg/L), TCE (< 0.5 μg/L), or MC (< 0.5 μg/L) were observed in new Shallow Zone monitoring well 18CPTMW22R.

Upper Wilcox Formation monitoring well 18CPTMW22SW, co-located with Shallow Zone well 18CPTMW22R and Lower Wilcox Formation well 18CPTMW22DW had a perchlorate concentration of 10,200 μg/L, a methylene chloride concentration of 0.534 J μg/L, a TCE concentration of 0.633 J μg/L, and a 1,4-dioxane concentration of < 0.5 μg/L. Monitoring well 18CPTMW26SW had a perchlorate concentration of 6.42 μg/L but no detections of 1,4-dioxane (< 1 μg/L), TCE (< 0.5 μg/L), or MC (< 0.5 μg/L). This well is located between LHAAP-18/24 and LHAAP-17 and indicates that little migration of perchlorate has occurred toward this location.

New upper Wilcox Formation wells, 18CPTMW19SW and 18CPTMW23SW, located in the northwest of the containment had no detection of 1,4-dioxane (< 1 μg/L), TCE (< 0.5 μg/L), or MC (< 0.5 μg/L) and low concentrations of perchlorate (1.25 μg/L in 18CPTMW19SW and 0.407 μg/L in 18CPTMW23SW). These wells provide delineation of these constituents in the north/northwest area of the site.

In general, the lateral extent of perchlorate, TCE, MC, and 1,4-dioxane in the Shallow Zone and in the Wilcox Formation has been determined with two exceptions. 1,4-Dioxane in MW-16 near Harrison Bayou had a concentration of 18 μg/L, exceeding the 1,4-dioxane Groundwater Residential Protective Concentration Level (PCL) of 9.1 μg/L. The TCE result of 14.1 μg/L at MW-18, located to the southwest of the site, exceeded the MCL of 5 μg/L.

1 INTRODUCTION

AECOM Technical Services, Inc. (AECOM) has been contracted by the USACE, Tulsa District, to complete the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) Remedial Action (RA) at the Longhorn Army Ammunition (LHAAP) site LHAAP-18/24 (Burning Grounds #3 and Unlined Evaporation Pond [UEP]), located in Karnack, Texas. The U.S. Army Base Realignment and Closure (BRAC) Division received administrative control of LHAAP in October 2002. The U.S. Army Environmental Command (AEC) is responsible for funding the Installation Restoration Program (IRP) and Military Munitions Response Programs at LHAAP.

This document describes the targeted investigation activities at LHAAP-18/24 (site) to supplement the data collected under the Post-Screening Investigation (2013 investigation) (AECOM, 2013) and Updated PSI Report (2014 investigation) (AECOM, 2016). The purpose of this work is to fill data gaps at site LHAAP-18 (Burning Ground No. 3) in support of completing the Feasibility Study (FS) for the site. These data gaps were identified in the Final Updated PSI Report (AECOM, 2016), and from U. S. Environmental Protection Agency (USEPA) and Texas Commission on Environmental Quality (TCEQ) comments on the report. The scope of this work was developed during the monthly managers meeting held on October 29, 2015, documented in a Supplemental PSI Work Plan (WP) (AECOM, 2015), and approved by USEPA and TCEQ on December 21, 2015 and December 16, 2015, respectively.

1.1 LHAAP Background

The LHAAP is an inactive, government-owned, formerly contractor-operated and maintained industrial facility located in central-east Texas in the northeastern corner of Harrison County. The facility occupies approximately 1,400 of its former 8,416 acres located between State Highway 43 in Karnack, Texas, and the western shore of Caddo Lake as shown in **Figure 1-1**. LHAAP was listed as a National Priorities List site on August 9, 1990, due to threatened releases of hazardous substances, pollutants, or contaminants. The USEPA, the Texas Water Commission (now the TCEQ), and the U.S. Army signed a Federal Facilities Agreement on December 30, 1991.

The nearest cities are Marshall, Texas, approximately 14 miles to the southwest, and Shreveport, Louisiana, approximately 40 miles to the southeast.

1.2 LHAAP-18/24 Background

LHAAP-18/24 is a 34.5 acre fenced, cleared area (with an interim remedy that includes a containment area) located in the southeastern section of LHAAP (**Figure 1-2**). The site is between Avenue Q to the southeast and Harrison Bayou to the northwest. LHAAP-17 (Burning Ground No. 2) is to the southwest (**Figures 1-2** and **1-3**), and heavily wooded areas lie to the east and northeast. The area had been used for the treatment, storage, and disposal of solid and liquid explosive, pyrotechnic, and combustible solvent waste by open burning/open detonation, incineration, evaporation, and burial. LHAAP-18/24 encompasses a number of Defense Environmental Restoration Program Management Information System sites:

- Burning Ground No. 3;
- Rocket Motor Washout Pond;

- Former UEP;
- 24-X Holding Area;
- 25-X Washout Pad;
- Air Curtain Destructor;
- Three Open Burning Cages (003, 155, 156);
- Two Open Burning Pans (157, 158);
- Building 41-X; and
- Building 43-X.

The locations of these sites within LHAAP-18/24 are presented in the Environmental Site Assessment (Plexus, 2005) and identified in **Figure 1-3**. The former UEP/Rocket Motor Washout Facility is located within the northern corner of LHAAP-18/24.

LHAAP-18/24 is generally vegetated with grass and weeds and is crossed by a number of paved roads. It is situated on a natural topographic high slightly west of the crest of a small topographic divide between Harrison Bayou and Saunder's Branch. The topography of the site has been greatly altered by operations over the past 35 years. LHAAP- 18/24 is mostly level, with more relief near the western corner that contained the air-curtain destructor until 2003 and near the northern corner that contains the mounded surface of the former UEP. No signs of substantial erosion are visible.

Burning Ground No. 3 operated between 1955 and 1998. Historical waste management units include open burn pits, the UEP, stockpiles of solvent-soaked sawdust, and suspected waste burial pits. The UEP was constructed at the burning ground in 1963 as a holding pond to store explosive wastes resulting from the washout of rocket motor casings. In 1973, the pond also began receiving waste water containing solvent residues and solids. An air curtain destructor (ACD) was built in 1979 for the purpose of disposing of explosive and explosive-contaminated wastes by burning.

Use of burn pit and trenches was reportedly discontinued in 1984, and the use of the UEP was also discontinued in 1984 when it was discovered that the pond was contaminating groundwater beneath the site. The UEP was closed as a Resource Conservation and Recovery Act (RCRA) interim status surface impoundment in 1986 by removing all waste and capping the impoundment. The last burning cage was removed in 1998.

Wastes removed during the closure of the UEP were disposed of off-site at a RCRA certified disposal facility. As part of the LHAAP-18/24 Interim Remedial Action (IRA), approximately 32,000 cubic yards of source area soil were excavated and treated by low temperature thermal desorption. Some of the treated soil was placed at LHAAP-12 and LHAAP-16.

A groundwater extraction system incorporating approximately 5,000 ft of ICTs and a groundwater treatment plant (GWTP) was installed in 1997 to control the migration of contaminated groundwater in the shallow groundwater zone. The treated water is primarily planned to be released to Harrison Bayou with occasional release of treated water as irrigation water on LHAAP-18/24, or to a holding pond (INF Pond). However, due to drought conditions

between 2011 and 2014, flow in Harrison Bayou did not support discharge to Harrison Bayou. Instead, the majority of the treated water was released via irrigation.

1.2.1 Surface Water Hydrology

Harrison Bayou flows within approximately 200 ft of the western corner of LHAAP-18/24. There are no surface water bodies or watercourses running through the site. Surface drainage occurs in all directions, but flow is generally directed toward Harrison Bayou to the West and by both natural and manmade ditches and drainage swales to the north. Harrison Bayou drains into Caddo Lake, which is located approximately one mile northeast of LHAAP-18/24. The extreme western corner of the site is located within the 100-year floodplain of Harrison Bayou.

1.2.2 Hydrogeology

Until 2012, the existing Conceptual Site Model (CSM) described three groundwater zones at LHAAP-18/24: shallow, intermediate, and deep. The three groundwater zones were described as somewhat separated by non-uniform, non-contiguous clay or silty clay layers. The separation between aquifer zones is therefore primarily descriptive and defined by the intervals in which groups of monitoring wells have been completed. The depths of monitoring wells screened in the shallow groundwater zone are typically between 10 and 53 feet (ft) below ground surface (bgs). The depths of monitoring wells in the intermediate groundwater zone are typically between 44 and 80 ft bgs. The depths of monitoring wells in the deep groundwater zone are between 98 and 185 ft bgs.

The CSM was updated on October 18, 2012. The updated CSM describes the presence of two units at LHAAP-18/24: a shallow unit up to a depth of approximately 45 ft bgs (Shallow Zone), and a deep unit below the shallow zone (Wilcox Formation). Generally, these two units are separated by a contiguous clay layer which is believed to be present across the entire site with the exception of the area to the west and northwest towards Harrison Bayou (i.e., within the floodplain of Harrison Bayou). As an example, it appears that the Shallow Zone and Wilcox Formation are well separated beyond the eastern edge of the site (e.g., near 18WW17 and 18WW18), while there is no separation at all just beyond the western corner (i.e., in the vicinity of 18WW02 and 18WW06). In between, the clay layer beneath the shallow zone varies considerably in depth and thickness. Generally, based on the updated CSM, the shallow and shallow/intermediate-screened wells are identified in the Shallow Zone (up to a depth of 40 ft bgs) and the intermediate and deep-screened wells are identified in the Wilcox Formation (generally below approximately 45 ft bgs). The intermediate wells are generally screened in the upper (shallow) Wilcox Formation and the deep wells are generally screened in the lower (deep) Wilcox Formation. Upper Wilcox and shallow Wilcox are used interchangeably and refer to the portion of the Wilcox Formation just below the Wilcox clay at an approximate depth of 50 to 80 ft bgs. Similarly, lower Wilcox and deep Wilcox are used interchangeably and refer to the portion of the Wilcox Formation at approximately 80 ft or more bgs.

Figure 1-4 shows the shallow groundwater elevations for March 2016 (prior to the current investigation), indicating the groundwater flow in the shallow zone to occur outwardly from the site in a radial direction. Localized influence of groundwater extraction and reinjection can be observed in the shallow aquifer. The gradient and direction of flow in the Wilcox Formation in the northern portion of the site seem to be similar to the shallow zone; toward Harrison Bayou (**Figure 1-5**).

Groundwater in the deep zone near LHAAP is currently used as a drinking water source. As of May 2015, six active water supply wells near the LHAAP were identified (**Figure 1-2**). All these public water supply wells are located greater than two miles from the LHAAP-18/24 site. Karnack Water Supply Corporation operates two Public Water Supply Wells servicing the town of Karnack. These wells were completed in 1905 to depths of 287 and 285 ft bgs and are located hydraulically upgradient approximately one-quarter mile northwest and one-half mile southwest of the town center, respectively. Caddo Lake Water Supply Corporation operates three source wells located north and northwest of LHAAP that have been in use since 1905. These wells are hydraulically upgradient of LHAAP (Jacobs, 2002) with completion depths of 244, 185 and 310 ft bgs. Caddo Lake State Park operates one source well located approximately 1.6 miles northwest upgradient of LHAAP. This well was installed in 1905 with a total depth of 292 ft. Due to the large distance between these wells and LHAAP, water removal from these wells is not expected to affect groundwater flow at the site. In addition, there are several livestock and domestic wells (shown as Groundwater Wells on **Figure 1-2**) located in the vicinity of LHAAP with depths averaging 250 ft (**Figure 1-2**). There are three water supply wells located within LHAAP (see **Figure 1-2**) upgradient of LHAAP-18/24. These water wells supply water to buildings currently in use on the installation. Their approximate locations and depths are as follows:

- 150 ft south-southeast of the fire station approximately 2 miles from LHAAP-18/24; 128 ft deep
- İ mile southwest of the fire station approximately 2 miles from LHAAP-18/24; 195 ft deep
- At the U.S. Fish and Wildlife Service facility approximately 2.6 miles from LHAAP-18/24; 220 ft deep

None of these wells are close to LHAAP-18/24, and none of these wells are used for drinking water. Two additional wells that had previously supplied water to the installation have been plugged and abandoned. None of the water supply wells are associated with or are in imminent danger from the localized contaminated groundwater at LHAAP-18/24.

1.3 Previous Investigations and Remedial Actions

The environmental media (e.g., soil, groundwater, surface water, and sediment) at LHAAP-18/24 have been the subject of numerous investigations to identify potential contamination. Those investigations are summarized in the Updated PSI Report for LHAAP-18/24 (AECOM, 2016).

In addition to the IRAs described above, several remedial actions have been conducted at LHAAP-18/24. These are summarized in the Updated PSI Report for LHAAP-18/24 (AECOM, 2016).

1.4 Organization of Report

This report has been organized in the following sections:

- *Section 1: Introduction* - summarizes the site background including previous investigation and remediation activities, and provides the purpose, scope of work, and objectives of the WP

- *Section 2: Investigation Activities* - describes the completed scope of work and the sampling and analysis methodology to address the site data gaps. Deviations from the Supplemental PSI WP (AECOM, 2015) are presented in this Section
- *Section 3: Investigation Findings* ï provides a presentation of the data, updates to the CSM, analysis of the data gaps, and discussion of the findings
- *Section 4: Conclusions and Recommendations* ï Provides main conclusions and recommendations
- *Section 5: References* - provides a list of references cited in the document.

This Revised Updated PSI Addendum Report also includes a number of appendices supporting the main text:

- Appendix A: Field Boring Logs and Monitoring Well Construction Logs
- Appendix B: Quality Control Summary Report & Laboratory Analytical Reports.
- Appendix C: Groundwater Sampling Forms.

2 INVESTIGATION ACTIVITIES

This section presents the completed investigation scope of work, the sampling and analysis methodology, and deviations from the Supplemental PSI WP (AECOM, December 2015).

2.1 Data Gaps and Proposed Investigation Scope of Work

To address the data gaps identified in the Final Updated PSI Report (AECOM, 2016), the specific areas that were investigated are presented below.

2.1.1 Potential Perchlorate Source Extent Assessment in the Southern Corner of the Site

The following specific objectives were identified for this work:

- Determine the presence and extent of a potential perchlorate source in the Shallow Zone groundwater in the southern area of the site. This area is in the vicinity of MW-07 extending southeast to the vicinity of 18CPTMW22SW.
- Determine if perchlorate in Shallow Zone groundwater extends from LHAAP-18/24 to LHAAP-17 in the southern area of LHAAP-18/24.

2.1.2 Shallow Zone Groundwater Monitoring Wells

The scope of work in the Shallow Zone groundwater included the following activities:

- Installation of a 4-inch diameter monitoring well to replace former monitoring well 18CPTMW22, including completion of vertical soil profiling for perchlorate and volatile organic compounds (VOCs) in the shallow zone formation into the Wilcox clay.
- Installation of a 4-inch diameter monitoring well approximately 250 ft west/southwest of former monitoring well 18CPTMW22 for perchlorate delineation towards LHAAP-17 including completion of vertical soil profiling for perchlorate and VOCs in the Shallow Zone into the Wilcox clay.
- Installation of a 4-inch diameter monitoring well approximately 100 ft north of monitoring well 18CPTMW23 for perchlorate delineation towards Harrison Bayou including completion of vertical soil profiling for perchlorate and VOCs in the shallow zone formation into the Wilcox sand.

2.1.3 Wilcox Formation Groundwater Monitoring Wells

The scope of work in the Wilcox Formation groundwater included the following activities:

- Installation of a deep Wilcox 4-inch diameter monitoring well approximately 30 ft south of monitoring well 18CPTMW22SW including completion of vertical soil profiling for perchlorate and VOCs in the Wilcox Clay and Wilcox Formation.
- Installation of a 4-inch monitoring well adjacent to monitoring well 18CPTMW23 for lateral and vertical perchlorate and VOCs delineation in the Wilcox Formation including completion of vertical soil profiling for perchlorate and VOCs in the shallow zone formation and into the Wilcox Formation.

- Installation of an upper Wilcox 4-inch diameter monitoring well approximately 100 ft north of monitoring well 18CPTMW08SW and adjacent to 18CPTMW19 for vertical and lateral perchlorate and VOC delineation including completion of vertical soil profiling for perchlorate and VOCs in the Wilcox Formation.
- Installation of a 4-inch diameter monitoring well approximately 250 ft west/southwest of former monitoring well 18CPTMW22 for perchlorate delineation in the upper Wilcox Formation towards LHAAP-17 including completion of vertical soil profiling for perchlorate and VOCs (combined with the shallow zone formation profiling discussed above) into the upper Wilcox Formation.

Although the previous investigations identified data gaps in the soil and groundwater, this report discusses the data gaps identified in the soils. The groundwater data gaps, which included the installation of monitoring wells completed during this effort, will be addressed as part of the site semi-annual sampling program.

2.2 Summary of Site Investigation

The investigation activities completed to collect necessary data to address the identified data gaps are presented below.

The purpose of this investigation was to assess and potentially identify the source of perchlorate detected in the southern corner of the site and update the CSM in this area. The investigation involved the drilling and sampling of 17 soil boring locations using direct push technology (DPT) drilling techniques. The shallow subsurface field investigation was conducted between February 22 and March 15, 2016.

Additional investigation activities occurred between April 18 and June 27, 2016 involving the drilling and installation of 7 monitoring wells. Four of these monitoring wells (18CPTMW22R, 18CPTMW22DW, 18CPTMW26, and 18CPTMW26SW) were completed in the southern portion of the site to assist in the horizontal and vertical delineation of perchlorate in the subsurface. The other three monitoring wells were placed where data gaps were observed; 18CPTMW23SW, 18WW25, and 18CPTMW19SW were installed north-northwest of the site for lateral and vertical extent determination of perchlorate in groundwater.

Prior to conducting drilling and other subsurface activities during this investigation, the Texas One Call System was notified to locate underground utilities. The Texas One Call System was periodically updated during the course of the investigation.

2.2.1 Subsurface Soil Assessment

The Shallow Zone soils in the southern portion of the site were assessed by drilling and soil sampling using a DPT rig at the locations identified in the Supplemental PSI WP. The initial soil borings 18DPT01 through 18DPT05 were drilled, sampled, and analyzed for perchlorate and VOCs. Stepout soil borings in ordinate directions approximately 100 ft away from the impacted soil borings were completed in areas where contaminant of concern (COC) concentrations indicated the presence of contamination. Additional stepout soil borings were advanced and sampled until the concentrations of the COCs in soil were below soil GWP-Ind MSC or were below detection limits. The Shallow Zone soil borings terminated at the ñWilcox clay.ò During the course of this investigation, the Wilcox clay was interpreted to vary in depth from

approximately 11.5 to 36 ft bgs in the southern portion of the site. It was typically shallower in the soil borings located farther to the south. The proposed number of soil samples stated in the Supplemental PSI WP was five per borehole location; however due to the variations in borehole depths, the number of soil samples ranged between 4 soil samples and 7 soil samples. **Figure 2-1** presents the location of completed boreholes. The soil boring logs are provided in **Appendix A**.

Additional assessment in the southern portion of the site was accomplished by sampling the soil during the drilling and installation of monitoring wells 18CPTMW22R, 18CPTMW22DW, 18CPTMW26, and 18CPTMW26SW. Sonic drilling methods were used in the drilling and installation of these monitoring wells. 18CPTMW22R was drilled and completed as a replacement to plugged and abandoned monitoring well 18CPTMW22. Monitoring wells 18CPTMW26 and 18CPTMW26SW were drilled and sampled to delineate the COCs in the shallow and upper Wilcox zone, respectively to the west of LHAAP-18/24 towards LHAAP-17. Monitoring well 18CPTMW22DW was drilled to a depth of 90 ft bgs and used to vertically delineate the COCs in the lower Wilcox Formation. The borehole locations for these monitoring wells are presented in **Figure 2-1**.

A data gap existed with respect to the delineation of perchlorate and VOCs in the shallow zone, north of 18CPTMW23 near Harrison Bayou. To complete the vertical soil profile of perchlorate and VOCs in the shallow zone formation north of 18CPTMW23 towards Harrison Bayou, the borehole for monitoring well 18WW25 was drilled and sampled using a hollow stem auger drill rig near Harrison Bayou to a depth of 24 ft bgs. Soil samples were obtained at approximately 5-foot intervals. The Wilcox clay was not identified during drilling and sampling activities of this borehole. **Figure 2-2** provides the location of this well.

A data gap existed northwest of the site with respect to vertical delineation of perchlorate and VOC in the Wilcox Formation in proximity to monitoring well 18CPTMW23. Sonic drilling methods were used to drill and sample the soil boring and install monitoring well 18CPTMW23SW into the upper Wilcox Formation and complete the vertical soil profile for perchlorate and VOCs. Soil samples were obtained at approximately 10 ft intervals. The Wilcox clay was not identified during the drilling and sampling of the borehole. **Figure 2-2** provides the location of this well.

A data gap existed northwest of the site approximately 100 ft north of monitoring well 18CPTMW08SW adjacent to 18CPTMW19 in the Wilcox Formation. Sonic drilling methods were used to drill and sample the soil boring and install monitoring well 18CPTMW19SW into the upper Wilcox Formation and complete the vertical soil profile for perchlorate and VOCs. Soil samples were obtained at approximately 10 ft intervals. The Wilcox clay was identified at 20.3 ft bgs extending to a depth of 41.4 ft bgs. **Figure 2-2** provides the location of this well.

2.2.1.1 DPT

DPT drilling methods were used between February 22 and March 25, 2016 to drill 17 boreholes (18DPT01 through 18DPT17) located at the southern corner of the site to identify and delineate perchlorate in the Shallow Zone . The borehole locations are depicted in **Figure 2-1**.

Continuous soil samples were collected by pushing a 5-foot sample barrel at 5-foot increments. After the core barrel is advanced five ft (occasionally 2.5-ft increments were implemented due to flowing sands), the drill rods are removed from the borehole and the acetate sleeve containing the soil is removed from the sample barrel. Discrete soil samples were collected from each soil

boring location and analyzed for perchlorate and VOCs on an accelerated turnaround basis to allow rapid decisions on additional data collection. The discrete soil samples were collected at approximately 5-foot intervals, where significant photoionization detector (PID) readings were recorded, or at lithology changes. Samples were collected from the vadose zone, the saturated Shallow Zone, and in the Wilcox clay. In some instances where the Wilcox clay was not identified soil samples may have been obtained in the upper Wilcox sand. The general procedures used in DPT drilling are described in AECOM SOP 16 presented in the Final Installation-Wide Work Plan (AECOM, 2014).

A biased sampling approach was used to determine the source and extent of perchlorate in the Shallow Zone. Five borings were initially identified to start the investigation as shown in **Figure 2-1** by the orange-colored borehole symbols. Two initial DPT soil borings, one at the former Building 25-X (18DPT04) and one located midway between 18CPTMW22SW and 18DPT04 (18DPT05) were drilled and sampled to determine if building 25-X was contributing to the perchlorate in the subsurface. Since perchlorate was previously identified in 18CPTMW22SW, three initial DPT soil borings (18DPT01, 18DPT02, and 18DPT03) were drilled and sampled approximately 100 ft to the east, south, and west, respectively.

Based on the results of the five initial soil borings, additional soil borings at approximately 100 ft stepouts were advanced to the Wilcox Clay to delineate the perchlorate impact. The offset soil borings associated with each initial borehole are as follows:

- Initial boring 18DPT04; offset soil borings 18DPT06 (north), 18DPT07 (east), 18DPT15 (west), and 18DPT17 (south)
- Initial boring 18DPT05; offset soil boring 18DPT12 (southwest)
- Initial boring 18DPT01; offset soil borings 18DPT11 (north), 18DPT10 (east), and 18DPT14 (south)
- Initial borehole 18DPT02; offset soil borings 18DPT14 (east), 18DPT13 (south), 18DPT09 (west); and,
- Initial borehole 18DPT03; offset soil borings 18DPT09 (south), 18DPT08 (west), and 18DPT12 (north)

Per the direction of the USACE, soil borings 18DPT16, 18DPT15, and 18DPT17 were located in proximity to the former X-25 building location to determine if the former building is a source for perchlorate in the subsurface.

2.2.1.2 Sonic Drilling

Sonic drilling was primarily used to drill the boreholes beyond the reach of the DPT rig and for the installation of the monitoring wells. The well locations are depicted in **Figures 2-1 and 2-2**. Due to its versatility of using different diameter drill pipes, the sonic rig is able to install a temporary 8-inch surface casing in the shallow zone, to isolate the soil boring from the shallow zone while continuing to drill deeper into the subsurface. A 10-ft long 4-inch diameter core barrel was used to obtain the soil samples by advancing the core barrel into the subsurface by vibration which was followed with a 7-inch drill pipe to keep the hole from collapsing and isolating it from the surrounding lithology. Once the core barrel was advanced to a sufficient depth it was retrieved to the surface and the soil vibrated out into elongated plastic bags for

logging and sampling. When drilling below the Shallow Zone, a temporary 8-inch surface casing was installed into the clay to isolate the borehole from the Shallow Zone. Hydrated bentonite was used to seal the bottom of the temporary surface casing. The surface casing was then removed once the well was completed.

Further delineation south of the site was accomplished by sampling the soil during the drilling and installation of monitoring wells 18CPTMW22R, 18CPTMW22DW, 18CPTMW26, and 18CPTMW26SW. To address the other data gaps identified in the Final Updated PSI Report (AECOM, 2016), monitoring wells 18CPTMW19SW and 18CPTMW23SWwere drilled and sampled using a sonic drill rig; however, a hollow-stem auger (HSA) was used to drill Shallow Zone well 18WW25 as the area to the north of the site near Harrison Bayou was flooded and inaccessible at the time the sonic rig was available. Eight-and-a-quarter-inch diameter hollow stem augers were used to drill and install monitoring well 18WW25. A 5-foot long core barrel was used to continuously sample the borehole.

2.2.1.3 Subsurface Soil Samples

Seventy-eight discrete soil samples from 17 soil borings were collected for perchlorate and VOC analysis from the area on the south side of the site. During the investigation, the soil samples were obtained using DPT drilling techniques within the upper 45 ft of the subsurface (Shallow Zone groundwater). The soil samples were generally selected based on a combination of elevated PID results and soil type; however, soil samples were also selected where PID responses were low in various soil types to confirm non-detect/low concentrations of VOCs.

To augment the soil samples collected and analyzed during the DPT subsurface investigation, 23 discrete soil samples (12 shallow and 11 deep) were collected using the same criteria as the DPT investigation while drilling the soil borings for the monitoring wells. The soil samples from these soil borings further delineate the COCs horizontally as well as vertically (up to 90 ft bgs) in the southern portion of the site. Monitoring well 18CPTMW22R and 18CPTMW26 were drilled and installed in the Shallow Zone. 18CPTMW22R was drilled and installed as a replacement of plugged and abandoned well 18CPTMW22. Monitoring well 18CPTMW26SW was drilled and installed in the upper portion of the Wilcox sand; whereas 18SCPMW22DW was drilled and installed in the lower portion of the Wilcox sand. Eight-inch diameter temporary surface casing was used in both holes to isolate them from the Shallow Zone while drilling continued into the Wilcox sand.

North of the containment area soil borings for monitoring wells 18CPTMW19SW and 18CPTMW23SW were drilled and sampled to 64 ft bgs into the upper Wilcox Formation using sonic drilling techniques. A total of 14 soil samples, seven from 18CPTMW19SW and seven from 18CPTMW23SW were used to vertically profile the COCs in these soil borings. The soil boring for monitoring well 18WW25 was drilled and sampled within the shallow zone using a HSA drill rig. Five soil samples were obtained and analyzed to vertically profile the COCs within this soil boring. The methodology used to obtain subsurface soil samples followed the procedures described in AECOM SOP 05 presented in the Final Installation-Wide Work Plan (AECOM, 2014).

The soil samples were submitted to Microbac Laboratory, a Texas-licensed laboratory located in Marietta, Ohio for chemical analyses. The packaging and shipment of soil samples to the

laboratory followed the procedures described in AECOM SOP 08 presented in the Final Installation-Wide Work Plan (AECOM, 2014).

2.2.2 Groundwater Sampling

A comprehensive sampling event for groundwater was conducted in June 2016 after the monitoring wells were installed. A comprehensive groundwater gauging event was conducted on June 9, 2016 except for monitoring well 18WW25, which was not installed at the time the wells were gauged at the site on June 9, 2016. The gauging and sampling procedures followed the procedures described in the Installation-Wide Work Plan (AECOM, July 2014).

2.2.3 Field Quality Control Samples

2.2.3.1 Assessment of Field Procedures

As part of the Quality Control/Quality Assurance (QA/QC) procedures used during the field investigation, field quality control samples were obtained during sampling activities. The quality control samples included equipment blanks, trip blanks, and temperature blanks.

For each cooler containing samples for VOC analysis to be transported to the laboratory, a trip blank was included. The trip blank consisted of two laboratory-provided 40-milliliter VOA vials containing deionized water. This trip blank was used to determine whether the sample shipment may have been contaminated during transit from the field to the laboratory. The trip blanks were analyzed for VOCs.

A temperature blank was included in each cooler shipped to the laboratory. The temperature blank consists of a small laboratory-provided container containing water. It was used by the laboratory to confirm that the cooler arrived at the appropriate temperature.

2.2.3.2 Assessment of Field Variability

To evaluate or determine the source of measurement error arising from cumulative effects of both field and laboratory bias, duplicate samples were collected and submitted to the laboratory for analyses. One field duplicate was collected for approximately every 10 samples collected from each medium. The duplicate samples were analyzed for the same parameters as the media being sampled.

Laboratory control samples such as matrix spike (MS) and matrix spike duplicate (MSD) were collected during the sampling activities. These samples were evaluated by the laboratory to assess contamination introduced during sample preparation activities and/or from instrument contamination. One MS and MSD sample was collected approximately every 20 samples collected from each medium.

2.3 Surveying

The wells and boreholes were surveyed, and the results are presented in Exhibits 1 and 2.

2.4 Investigation Derived Waste

The investigation derived soil cuttings were placed in a roll-off box. The soil will be sampled, profiled and disposed in accordance with regulatory requirements. Water generated during drilling activities was added to the GWTP influent, treated, and disposed of accordingly. Other solid waste was disposed as municipal solid waste (i.e., trash).

Notes

1) All monitoring wells installed in 2013 have nomenclature beginning with "18CPT" with the exception of 18WW22 which was also installed in 2013.
2) "SW" at the end of well nomenclature indicates a shallow Wilcox Formation monitoring well (i.e., to a depth of 70 feet bgs).
3) "DW" at the end of well nomenclature indicates a deep Wilcox Formation monitoring well (i.e., to a depth of 100 feet bgs).
4) "P&A" - Plugged and Abandoned

3 INVESTIGATION FINDINGS

This section presents the data collected during this investigation in the context of addressing identified data gaps. This additional information is intended to improve the overall site conceptual model associated with hydrogeology, contaminant sources, and contaminant distribution in targeted areas of the site.

3.1 Hydrogeology

The subsurface investigation was conducted based on the LHAAP-18/24 Supplemental PSI WP (AECOM, 2015). Discrete soil samples were collected and tested for contaminant concentrations. Monitoring wells were installed in the shallow and Wilcox Formation to collect groundwater data.

3.1.1 Perchlorate Distribution in the Shallow Zone Soil at the Southern Area of Site

The soil data collected from DPT soil borings and the soil borings used to install the new groundwater monitoring wells for perchlorate, expanded the understanding of perchlorate presence and distribution within and outside the containment area in the Shallow Zone and Wilcox Formation. The location and concentration of perchlorate in these soil borings are depicted in **Figure 2-1**. The analytical results are presented in **Table 3-1**. **Table 3-1** also provides analytical results for VOCs. However, VOC concentrations were mostly nondetect with all concentrations reported above the detection limit below the MSC. **Table 3-1** also provides information about where the samples were collected from; the unsaturated Shallow Zone, saturated Shallow Zone, Wilcox clay, or Wilcox sand.

The perchlorate concentrations in the six DPT boreholes collected inside the containment area (18DPT04, 18DPT05, 18DPT06, 18DPT07, 18DPT16, and 18DPT17) in the southern portion of the site revealed perchlorate concentrations in the vadose zone were well below the MSC of 7,200 micrograms per kilogram (Õg/kg), with the highest concentration found in 18DPT04 at 5-5.5 ft bgs at 101 Õg/kg, followed by 18DPT16 at 5-5.5 ft bgs at 41.8 Õg/kg located adjacent to the former building X-25. These relatively low concentrations of perchlorate would indicate that perchlorate is not sourced from the surface release in this area or has since been flushed out of the shallow soil and no longer represent a source.

In the saturated zone within the containment area, the concentration of perchlorate was elevated particularly in the Wilcox clay, which is in direct contact with the base of the Shallow Zone soil. The highest concentration of perchlorate was detected in 18DPT04 at 36.5-37.0 ft bgs at 3,200 Õg/kg. This concentration is less than the GWP-Ind MSC of 7,200 Õg/kg. Therefore, there is no particular source of perchlorate identified in the Shallow Zone in this area of the site.

Outside the southern corner of the site, the concentration of perchlorate in the vadose zone ranged from a low 5.53 Õg/kg found in 18DPT12 at 5-5.5 ft bgs to nondetect found in all of the other soil borings. This lack of perchlorate in the vadose zone outside the containment indicates that perchlorate is not sourced from a surface release in this area.

Outside the southern corner in the shallow saturated zone, the concentrations of perchlorate were typically low, increasing in depth the closer the samples were to the Wilcox clay. The higher

concentrations of perchlorate in the shallow saturated zone were detected in 18DPT03 (3,290 Õg/kg at 14.5-15 ft bgs) , 18DPT15 (3,440 Õg/kg at 21-21.5 ft bgs), and 18DPT11 (3,940 Õg/kg at 20-20.5 ft bgs). These elevated concentrations of perchlorate were found in the coarser materials (sand) just above the Wilcox clay. The highest perchlorate concentrations in the Wilcox clay were detected in the borehole of monitoring well 18CPTMW22DW at 9,440 Õg/kg at 29.5-30 ft bgs and 18DPT12 at 15,900 Õg/kg at 18-18.5 ft bgs. These two results for perchlorate represent the only two soil samples exceeding the perchlorate MSC of 7,200 Õg/kg. The analytical results for the soil samples obtained from the boreholes of the monitoring wells are presented in **Table 3-2**. The elevated concentrations of perchlorate in 18DPT12 in the Wilcox clay may represent perchlorate that had migrated via groundwater to this location prior to installation of the groundwater extraction system.

The perchlorate concentrations for the stepout borings were considerably lower or nondetect. Therefore, the concentration of perchlorate in the Shallow Zone is considered delineated outside of the southern corner of the site to the southeast, south, and southwest. The results also support the absence of a perchlorate source in this area of the site. The soil boring data from the drilling and sampling of monitoring well 18CPTMW26 and boring 18DPT08 supported the delineation of perchlorate in the Shallow Zone to the southwest toward LHAAP-17.

The perchlorate concentration in the southern corner of the site is presented in **Figures 2-1.** A quality control summary and laboratory analytical reports (provided on compact disc) are presented in **Appendix B**.

3.1.2 Perchlorate Distribution in the Wilcox Formation Soil at Southern Area of Site

Soil samples from two borings drilled for the installation of Wilcox Zone monitoring wells (18CPTMW26SW and 18CPTMW22DW) were collected and analyzed to determine the extent of perchlorate in the Wilcox Formation. Additionally, due to the lack of Wilcox clay in boring 18DPT08, it would appear that soil samples obtained and analyzed at depth were from the Wilcox Formation.

The analytical results from 18CPTMW26SW and 18DPT08 reveal concentrations of perchlorate at low concentrations with the highest detected in 18DPT08 at 31.3 Õg/kg at a depth of 26-26.5 ft bgs. The highest concentration detected in 18CPTMW26SW was 4.6J Õg/kg at a depth of 20-20.5 ft bgs. The paucity of perchlorate concentrations in 18CPTMW26SW and 18DPT08 delineates the perchlorate in the Wilcox Zone to the southwest towards LHAAP-17.

The soil boring for 18CPTMW22DW was drilled and sampled to a depth of 90 ft bgs. The Wilcox clay appears to extend to a depth of 32.5 ft bgs, below which, sand with occasional thin clay layers are present. The highest concentration of perchlorate was detected in the Wilcox clay at 29.5-30 ft bgs at a concentration of 9,440 Õg/kg. Another soil sample obtained at 40-40.5 ft bgs in a small clay layer contained perchlorate at 4,040 Õg/kg. Perchlorate concentrations of samples obtained at depths of 50-51 ft revealed trace amounts of perchlorate (3.36J Õg/kg). Soil samples obtained at 60-60.5 ft, 70-70.5 ft, 80-80.5 ft and 89.5-90 ft bgs revealed no concentrations of perchlorate above the laboratory detection level, providing vertical extent determination of perchlorate in the Wilcox Formation. **Table 3-3** provides information about the monitoring wells. A quality control summary and laboratory analytical reports (provided on compact disc) are presented in **Appendix B**.

3.1.3 Perchlorate Data Gaps in the Soil Outside Containment Area to the Northwest

The soil boring locations for the monitoring wells as well as the concentration of perchlorate in the soils is presented in **Figure 2-2**. The boring logs are presented in **Appendix A**. The analytical results are summarized in **Table 3-2** and the analytical reports are presented in **Appendix B**. **Table 3-3** provides information about the monitoring wells.

Analytical results associated with locations near the southern corner are incorporated into the discussion in Section 3.1.2. Three monitoring well installations on the northwest side that included soil sampling and analysis are discussed below.

Monitoring Well 18CPTMW19SW

Saturated soil conditions were observed at approximately 10 ft bgs in the soil boring for monitoring well 18CPTMW19SW. This soil boring was drilled and sampled into the upper Wilcox Formation to a depth of 65 ft bgs. Perchlorate concentrations were below the detection limits in soil samples obtained at 5-5.5 ft bgs and 10-10.5 ft bgs. At 20-20.5 ft bgs perchlorate was present at 8.74 Õg/kg followed by no detection of perchlorate at 30-30.5 ft bgs. At 40-40.5 and 50-50.5 ft bgs perchlorate was detected at 124 Õg/kg and 170 Õg/kg, followed by no detections at 60-61 ft bgs (< 2.54 Õg/kg), providing vertical delineation of perchlorate at this location. The Wilcox clay appears to extend from 20.3 ft bgs to 41.4 ft bgs.

Monitoring Well 18CPTMW23SW

Saturated soil conditions were observed beginning at the surface in the soil boring for monitoring well 18CPTMW19SW as the area was subjected to flooding during this investigation associated with heavy rains. This soil boring was drilled and sampled into the upper Wilcox Formation to a depth of 65 ft bgs. Relatively low concentrations of perchlorate were detected in soil samples obtained at 5-5.5 ft bgs, 10-10.5 ft bgs and 20-20.5 ft bgs at 19.6 Õg/kg , 1,920 Õg/kg , and 29.3 Õg/kg, respectively. At depths of 30-30.4 ft bgs, 40-40.5 ft bgs, 50-50.5 ft bgs, and 60-60.5 ft bgs perchlorate concentrations were below the detection limits, providing vertical delineation of perchlorate at this location. The Wilcox clay was not identified in this soil boring.

Monitoring Well 18WW25

Soil was observed to be saturated at approximately 2 ft bgs within the soil boring for monitoring well 18WW25. Soil samples obtained and analyzed for perchlorate at 3.5-4 ft bgs 9.5-10 ft bgs, 14.5-15 ft bgs, 19.5-20 ft bgs, and 22-22.5 ft bgs were found to be below the laboratory detection limits, providing lateral delineation of perchlorate at this location. The Wilcox clay was not identified within the borehole at this location.

3.1.4 Soil VOC Results

The purpose of this work was mostly associated with perchlorate extent determination. However, VOC data was analyzed from the same soil samples collected for perchlorate analysis. The results indicated sporadic detection of VOCs with all concentrations below the VOC MSCs. **Tables 3-1 and 3-2** provide VOC results for the soil samples.

3.2 Groundwater Results

A comprehensive sampling event for groundwater was conducted in June 2016 after the monitoring wells were installed. A comprehensive groundwater level gauging event was conducted on June 9, 2016 except for well 18WW25, which was not installed until June 27, 2016, after the gauging event (well 18WW25 was however sampled on June 29, 2016 and analyzed for COCs). The results are described below.

3.2.1 Groundwater Elevation

Potentiometric surface maps for the Shallow Zone (**Figure 3-1**) and Wilcox Formation (**Figure 3-2**) were developed from monitoring well gauging data presented in **Table 3-4**. The Shallow Zone groundwater elevations indicate the presence of a localized groundwater high in the northern portion of the site, near monitoring wells AWD-1 and 123, similar to historical observations. The new monitoring well 18CPTMW22R, just outside the containment area to the south of the site, indicated the presence of a groundwater high. The groundwater elevation in 18CPTMW22R substantiates the historically high groundwater elevations observed in adjacent well MW-20, which represent the surface of a small perched groundwater. Therefore, the groundwater elevations in MW-20 and 18CPTMW22R were not used in contouring the Shallow Zone groundwater surface (Figure 3-1). New well 18CPTMW26 to the west of 18CPTMW22R had the lowest groundwater elevation in this area of the site at 167.08 ft above mean sea level (amsl).

The Wilcox Formation potentiometric results indicate the presence of a groundwater high in the vicinity of MW-14 in the northwest area of the site consistent with previous observations. New Wilcox Formation monitoring well 18CPTMW23SW north of MW-14 outside the containment has a groundwater elevation of 167.90 ft amsl, which is 5.76 lower than in MW-14 with a groundwater elevation of 173.66 ft amsl, indicating the presence of a horizontal gradient between MW-14 and 18CPTMW23SW. Groundwater elevation in new Wilcox Formation monitoring well 18CPTMW23SW is 2.18 ft lower than co-located monitoring Shallow Zone monitoring well 18CPTMW23, indicating the presence of a downward vertical gradient. A downward vertical gradient is also observed between Shallow Zone monitoring well 18CPTMW19 at an elevation of 171.70 ft amsl and new Wilcox Formation monitoring well 18CPTMW19SW at an elevation of 170.33 ft amsl.

To the south of the containment, new deep Wilcox Formation monitoring well 18CPTMW22DW has a groundwater elevation of 170.88 ft amsl, which is approximately 1 foot higher than the new upper Wilcox Formation monitoring well 18CPTMW22SW, indicating a slight upward gradient. The lateral gradient in the upper Wilcox Formation between new monitoring well 18CPTMW26SW and monitoring well 18CPTMW22SW appears to be to the east toward 18CPTMW22SW with an elevation difference between these wells of 0.42 ft. The vertical gradient appears to be upward between new upper Wilcox Formation monitoring well 18CPTMW26SW with a groundwater elevation of 170.29 ft amsl and new Shallow Zone monitoring well 18CPTMW26 with a groundwater elevation of 167.08 ft amsl.

3.2.2 Groundwater COC Concentrations

The June 2016 groundwater analytical results are presented in **Table 3-5**. A quality control summary and laboratory analytical reports (provided on compact disc) are presented in **Appendix B**. Groundwater sampling forms for June 2016 are presented in **Appendix C**.

3.2.2.1 Perchlorate

Figures 3-3 and 3-4 display the isoconcentration contours for perchlorate in the Shallow Zone and the Wilcox Formation, respectively. In the Shallow Zone, the highest concentrations of perchlorate occur in the vicinity of the UEP extending to the northeast outside the containment to 18WW17, which is bounded by non-detect results at wells 18CPTMW18 to the northeast and C-08 to the east. Monitoring well 18WW22, with a perchlorate concentration of 1.53 µg/L, defines the extent of this perchlorate hot spot to the north. Another area of high perchlorate extends from the ACD area to the south to include monitoring wells MW-7 and MW-23. The extent of perchlorate in the Shallow Zone groundwater is defined in all directions. To the south of the site outside the containment, new Shallow Zone monitoring well 18CPTMW22R had a low perchlorate concentration at 0.917 µg/L in contrast to the concentration in plugged monitoring well 18CPTMW22, which had a perchlorate concentration of 106,000 µg/L in June 2014. 18CPTMW22 was screened in the Wilcox clay between a depth of 19 and 28.5 ft bgs (see **Appendix A** for corrected 18CPTMW22 well log), where the highest concentrations of perchlorate occur, based on discrete soil sample data (see **Figure 2-2**). Wilcox clay in this area of the site occurs at a depth of approximately 12 feet bgs. New monitoring well 18CPTMW22R is screened between 4.8 ft and 14.3 ft bgs and partially penetrates Wilcox clay. Soil data from 18CPTMW22R indicates < 2.8 µg/kg of perchlorate in the soil to a depth of 15.5 ft bgs. The nondetect levels of perchlorate in the shallow soil reflect the very low concentration in 18CPTMW22 groundwater at 0.917 µg/L. In contrast, soil data from 18CPTMW22DW drilled in April 2016 indicates the presence of perchlorate at 5,400 µg/kg at a depth of 20 to 20.5 ft bgs. Soil samples collected from 18CPTMW22SW had perchlorate concentrations of 10,600 µg/kg at a depth of 24 ft bgs and 10,200 µg/kg at a depth of 26.5 ft bgs. These high concentrations of perchlorate in soil between 20 and 26.5 ft bgs coincide with the high perchlorate concentration reported in 18CPTMW22 screened across this soil interval.

New Shallow Zone monitoring well 18CPTMW26 located to the west of 18CPTMW22R between LHAAP-17 and LHAAP-18/24 had insufficient water to collect groundwater samples. New Shallow Zone monitoring well 18WW25 to the northwest adjacent to Harrison Bayou had a perchlorate concentration of < 0.20 µg/L, indicating that the perchlorate plume in this area of the site does not extend to Harrison Bayou.

In the Wilcox Formation, similar to previous results, the highest perchlorate concentrations were observed in the vicinity of 18CPTMW08SW (35,000 µg/L), near MW-5 to the north of the UEP, near the ACD in MW-14 (177,000 µg/L to 229,000 ug/L) northwest of the containment area, and to the south outside the containment in monitoring well 18CPTMW22SW (10,200 µg/L). All these wells are screened in the upper Wilcox Formation. New upper Wilcox Formation monitoring well 18CPTMW26SW, located to the west of 18CPTMW22SW (screen interval of 44.5 to 54.1 ft bgs) had a perchlorate concentration of 6.42 µg/L. This well defines the extent of perchlorate in the upper Wilcox Formation between sites LHAAP-17 and LHAAP-18/24. The perchlorate concentration in new deep Wilcox Formation monitoring well 18CPTMW22DW, screened between 72.7 to 82.3 ft bgs, was 1.21 J µg/L and defines the vertical extent of perchlorate at this location. New upper Wilcox Formation monitoring wells 18CPTMW19SW and 18CPTMW23SW in the northwest area had perchlorate concentrations of 1.25 µg/L and 0.407 µg/L, respectively. Along with wells 18WW19, 18WW09, and 18WW02, these wells provide lateral delineation of the extent of perchlorate in the upper Wilcox Formation. The extent

of perchlorate in the Wilcox Formation is defined in all directions. The extent of perchlorate is delineated vertically except at two locations in the Wilcox Formation at MW-14 and 18CPTMW08DW.

3.2.2.2 Trichloroethylene

Figures 3-5 and 3-6 display the isoconcentration contours for TCE in the Shallow Zone and the Wilcox Formation, respectively. In the Shallow Zone, the highest concentrations of TCE occur in the vicinity of the ACD in monitoring well 120 in the western area of the site, and in the area to the south of the UEP in monitoring well MW-2. TCE concentrations decrease with distance from MW-2 and 120, but remain above 1,000 μg/L in a large area of the site toward wells MW-21, 18CPTMW04, MW-23, MW-7, 129, MW-9, and AWD-1. The extent of TCE in the Shallow Zone is defined in all directions with the exception of TCE in MW-18 to the southwest of the site, which exceeded the Maximum Contaminant Level (MCL) of 5 μg/L with a concentration of 14.1 μg/L. To the south of the site outside the containment, new Shallow Zone monitoring well 18CPTMW22R had a TCE concentration < 0.2 μg/L in contrast to the concentration in plugged monitoring well 18CPTMW22, which had a TCE concentration of 58.9 μg/L in June 2014. 18CPTMW22 was screened in the Wilcox clay between a depth of 19 ft bgs and 28.5 feet bgs whereas new monitoring well 18CPTMW22R is screened to 14.3 ft bgs.

New Shallow Zone monitoring well 18CPTMW26, located to the west of 18CPTMW22R between LHAAP-17 and LHAAP-18/24, had insufficient water to collect a groundwater sample. New Shallow Zone monitoring well 18WW25 to the northwest adjacent to Harrison Bayou had a TCE concentration of < 0.5 μg/L, defining the extent of TCE in this area of the site and confirming that TCE from groundwater is not being released to Harrison Bayou.

In the Wilcox Formation, similar to previous results, the highest TCE concentrations were observed near the ACD in MW-14 (12,700 μg/L to 15,900 ug/L) northwest of the containment area, in the UEP area between 18CPTMW08SW (74.2 μg/L) and 18CPTMW01SW (46.5 μg/L), and in the central western portion of the site in 18CPTMW03SW. All these wells are screened in the upper Wilcox Formation. New upper Wilcox Formation monitoring well 18CPTMW26SW, located to the west of 18CPTMW22SW, had a TCE concentration of < 0.5 μg/L. This well defines the extent of TCE in the upper Wilcox Formation between sites LHAAP-17 and LHAAP-18/24. The TCE concentration in new deep Wilcox Formation monitoring well 18CPTMW22DW, screened between 72.7 to 82.3 ft bgs, was < 0.5 μg/L and defines the vertical extent of TCE at this location. New upper Wilcox Formation monitoring wells 18CPTMW19SW and 18CPTMW23SW in the northwest area had non-detectable TCE concentrations of < 0.5 μg/L. Along with wells 18WW19, 18WW09, and 18WW02, these wells define the lateral extent of TCE in the upper Wilcox Formation. The extent of TCE in the Wilcox Formation is defined in all directions.

3.2.2.3 Methylene Chloride

Figures 3-7 and 3-8 display the isoconcentration contours for MC in the Shallow Zone and the Wilcox Formation, respectively. In the Shallow Zone, the highest concentrations of MC occur in the vicinity of the ACD in monitoring well AWD-1 in the western area of the site, and in the area to the south of the UEP in monitoring well MW-2. MC concentrations decrease with distance from MW-2 and 120 to below detection levels in adjacent wells such as MW-21, MW-1,

18CPTMW04, MW-3, 109, MW-22, MW-9, and MW-12. The extent of MC in the Shallow Zone is defined in all directions. To the south of the site outside the containment, new Shallow Zone monitoring well 18CPTMW22R had an MC concentration < 0.2 μg/L, the same as the June 2014 concentration of MC in plugged monitoring well 18CPTMW22.

New Shallow Zone monitoring well 18CPTMW26, located to the west of 18CPTMW22R between LHAAP-17 and LHAAP-18/24, did not have sufficient water to collect a groundwater sample. New Shallow Zone monitoring well 18WW25, to the northwest adjacent to Harrison Bayou, had an MC concentration of < 0.5 μg/L, defining the lateral extent of MC in this area of the site and confirming that MC in Shallow Zone groundwater is not being released to Harrison Bayou.

In the Wilcox Formation, similar to previous results, the highest MC concentrations were observed near the ACD in MW-14 (53.5 J ug/L) northwest of the containment area, and to the south of the UEP area in 18CPTMW01SW (746 μg/L). These wells are screened in the upper Wilcox Formation. New upper Wilcox Formation monitoring well 18CPTMW26SW, located to the west of 18CPTMW22SW had an MC concentration of < 0.5 μg/L. This well defines the extent of MC in the upper Wilcox Formation between sites LHAAP-17 and LHAAP-18/24. The MC concentration in new deep Wilcox Formation monitoring well 18CPTMW22DW was < 0.5 μg/L and defines the vertical extent of MC at this location. New upper Wilcox Formation monitoring wells 18CPTMW19SW and 18CPTMW23SW in the northwest area had MC concentrations of < 0.5 μg/L. Along with wells 18WW19, 18WW09, and 18WW02, these wells define the lateral extent of MC in the upper Wilcox Formation. The extent of MC in the Wilcox Formation is defined in all directions.

3.2.2.4 1,4-Dioxane

Figures 3-9 and 3-10 display the isoconcentration contours for 1,4-dioxane in the Shallow Zone and the Wilcox Formation, respectively. In the Shallow Zone, the highest concentrations of 1,4-dioxane occur in the vicinity of the ACD in monitoring well 120 in the western area of the site, to the south of the ACD in monitoring well MW-7, and in the area to the south of the UEP in monitoring well MW-2. The maximum 1,4-dioxane concentration occurred in monitoring well 120 at a concentration 220 μg/L, and the second highest concentration was observed in MW-16 to the north of 120 toward Harrison Bayou at a concentration of 18 μg/L. MW-7 had a concentration of 13.4 μg/L, and 129 to the north of MW-7 had a 1,4-dioxane concentration of 6.52 μg/L. The 1,4-dioxane concentration in MW-2 was 7.58 μg/L. The extent of 1,4-dioxane in the Shallow Zone is defined in all directions, except for the area around MW-16, where the concentration of 1,4-dioxane exceeds the Texas Risk Reduction Program (TRRP) Tier 1 Groundwater Residential Protective Concentration Level (PCL) of 9.1 μg/L. To the south of the site outside the containment, new Shallow Zone monitoring well 18CPTMW22R had a 1,4-dioxane concentration < 1 μg/L.

New Shallow Zone monitoring well 18CPTMW26, located to the west of 18CPTMW22R between LHAAP-17 and LHAAP-18/24, did not have sufficient water to collect a groundwater sample. New Shallow Zone monitoring well 18WW25 to the northwest adjacent to Harrison Bayou had a 1,4-dioxane concentration of < 1 μg/L, defining the extent of 1,4-dioxane in this area of the site and confirming that 1,4-dioxane in Shallow Zone groundwater is not being released to Harrison Bayou at that location.

In the Wilcox Formation, similar to previous results, the highest 1,4-dioxane concentrations were observed near the ACD in MW-14 (390 to 412 ug/L) northwest of the containment area. MW-14 is screened in the upper Wilcox Formation. New upper Wilcox Formation monitoring well 18CPTMW26SW, located to the west of 18CPTMW22SW, had a 1,4-dioxane concentration of < 1 μg/L. This well defines the extent of 1,4-dioxane in the upper Wilcox Formation between sites LHAAP-17 and LHAAP-18/24. 1,4-Dioxane concentration in new deep Wilcox Formation monitoring well 18CPTMW22DW was < 1 μg/L, similar to the concentrations in co-located upper Wilcox Formation well 18CPTMW22SW. New upper Wilcox Formation monitoring wells 18CPTMW19SW and 18CPTMW23SW in the northwest area had 1,4-dioxane concentrations of < 1 μg/L. Along with wells 18WW09 and 18WW02, these wells define the lateral extent of 1,4-dioxane in the upper Wilcox Formation. The extent of 1,4-dioxane in the Wilcox Formation is defined in all directions.

3.2.2.5 Metals

Figures 3-11 and 3-12 display the metal exceedance concentrations in the Shallow Zone and the Wilcox Formation, respectively. In the Shallow Zone, the following metals were detected above the MCLs/PCLs in one or more monitoring wells: arsenic, barium, beryllium, cadmium, chromium, lead, manganese, and nickel. Fifteen monitoring wells were reported to have one or more metals above the MCLs/PCLs. The detections of metals above MCLs/PCLs in Shallow Zone groundwater is sporadic and does not suggest the presence of a source of metal COCs.

In the Wilcox Formation, three monitoring wells had metal concentrations above the MCL/PCL. Arsenic in 18CPTMW01SW and manganese in C-03 and 18WW18 were reported above the MCL/PCL.

3.3 Update to Cross-Section D-D’

An update to cross-section D-Dô that was originally presented in the *Final Updated Post-Screening Investigation Report for LHAAP-18/24, Burning Ground No. 3 and Unlined Evaporation Pond* (AECOM, 2016) is provided in **Appendix A**. The updated cross-section corrects the 18CPTMW22 well screen and adds information for boring/well logs 18CPTMW22SW and 18CPTMW22DW.

- Shallow Zone Monitoring Well
- Road
- Stream
- Other Site Boundary
- LHAAP-18/24 Site Boundaries
- Ponded Area
- Groundwater Result

Notes

1) All monitoring wells installed in 2013 and 2014 have nomenclature beginning with "18CPT" with the exception of 18WW22 and 18WW24 which were also installed in 2013 and 2014, respectively.
2) "SW" at the end of well nomenclature indicates a shallow Wilcox Formation monitoring well (i.e., to a depth of 70 feet bgs).
3) "DW" at the end of well nomenclature indicates a deep Wilcox Formation monitoring well (i.e., to a depth of 100 feet bgs).
4) Only values exceeding the MCL or MSC have been included. MSC for Ni = 2.0 mg/L.

Abbreviations

As	Arsenic
Ba	Barium
Be	Beryllium
Cd	Cadmium
Cr	Chromium
Mn	Manganese
Ni	Nickel
Pb	Lead
mg/L	milligrams per liter
MCL	Maximum Contaminant Level
PCL	Texas Residential Groundwater Protective Concentration Level
F	Filtered

Chemical	MCL/PCL (mg/L)
Arsenic	0.01
Barium	2
Beryllium	0.004
Cadmium	0.005
Chromium	0.1
Lead	0.015
Maganese	1.1
Nickel	0.49

Longhorn Army Base

Metal Exceedance Concentrations in Groundwater Shallow Zone (June 2016) LHAAP-18/24 Longhorn Army Ammunition Plant Karnack, Texas

Date 12-2016

Project No. 60274185

AECOM

Blue Highlighting Indicates concentrations above the MSC

J - Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.

MSC - Medium-Specific Concentrations

U - Undetected: The analyte was analyzed for, but not detected.

UJ - The analysis was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample. 'UJ' not detects are not definite; the analyte may be present.

ug/kg - micrograms per kilogram

Table 3-1: LHAAP-18/24 DPT Soil Analytical Results - February/March 2016

Blue Highlighting Indicates concentrations above the MSC

J - Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.

MSC - Medium-Specific Concentrations

U - Undetected: The analyte was analyzed for, but not detected.

UJ - The analysis was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample. 'UJ' not detects are not definite; the analyte may be present.

ug/kg - micrograms per kilogram

Blue Highlighting Indicates concentrations above the MSC

J - Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.

MSC - Medium-Specific Concentrations

U - Undetected: The analyte was analyzed for, but not detected.

UJ - The analysis was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample. 'UJ' not detects are not definite; the analyte may be present.

ug/kg - micrograms per kilogram

Blue Highlighting Indicates concentrations above the MSC

J - Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.

MSC - Medium-Specific Concentrations

U - Undetected: The analyte was analyzed for, but not detected.

UJ - The analysis was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample. 'UJ' not detects are not definite; the analyte may be present.

ug/kg - micrograms per kilogram

Blue Highlighting Indicates concentrations above the MSC

J - Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.

MSC - Medium-Specific Concentrations

U - Undetected: The analyte was analyzed for, but not detected.

UJ - The analysis was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample. 'UJ' not detects are not definite; the analyte may be present.

ug/kg - micrograms per kilogram

Blue Highlighting Indicates concentrations above the MSC

J - Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.

MSC - Medium-Specific Concentrations

U - Undetected: The analyte was analyzed for, but not detected.

UJ - The analysis was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample. 'UJ' not detects are not definite; the analyte may be present.

ug/kg - micrograms per kilogram

Blue Highlighting Indicates concentrations above the MSC

J - Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.

MSC - Medium-Specific Concentrations

U - Undetected: The analyte was analyzed for, but not detected.

UJ - The analysis was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample. 'UJ' not detects are not definite; the analyte may be present.

ug/kg - micrograms per kilogram

Blue Highlighting Indicates concentrations above the MSC

J - Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.

MSC - Medium-Specific Concentrations

U - Undetected: The analyte was analyzed for, but not detected.

UJ - The analysis was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample. 'UJ' not detects are not definite; the analyte may be present.

ug/kg - micrograms per kilogram

Blue Highlighting Indicates concentrations above the MSC

J - Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.

MSC - Medium-Specific Concentrations

U - Undetected: The analyte was analyzed for, but not detected.

UJ - The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

ug/kg - micrograms per kilogram

Blue Highlighting Indicates concentrations above the MSC

J - Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.

MSC - Medium-Specific Concentrations

U - Undetected: The analyte was analyzed for, but not detected.

UJ - The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

ug/kg - micrograms per kilogram

Blue Highlighting Indicates concentrations above the MSC

J - Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.

MSC - Medium-Specific Concentrations

U - Undetected: The analyte was analyzed for, but not detected.

UJ - The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

ug/kg - micrograms per kilogram

Blue Highlighting Indicates concentrations above the MSC

J - Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.

MSC - Medium-Specific Concentrations

U - Undetected: The analyte was analyzed for, but not detected.

UJ - The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

ug/kg - micrograms per kilogram

Table 3-3: LHAAP-18/24 Monitoring Well Specifications

Monitoring Well	Formation Designation	Well Diameter (Inches)	Ground Surface Elevation (ft amsl)	Top of Casing Elevation (feet amsl)	Delta TOC and Ground Surface	Borehole Depth	Casing Depth	Screened Interval	Surface Casing
						(In Feet from Ground Surface)			
18CPTMW19SW	Upper Wilcox	4	190.83	193.29	2.46	65.0	65.0	55.0-64.6	None
18CPTMW22R	Shallow Zone	4	185	187.23	2.23	16.0	14.4	4.4-14.0	None
18CPTMW22DW	Lower Wilcox	4	185.2	188	2.8	90.0	83.0	72.7-82.3	29.5

Location IDs containing "F" indicate sample filtered in the field with 10 micron filter.

Location IDs containing "FD" indicate duplicate samples.

Location IDs containing "B" indicate sample taken at bottom of screened interval and "T" indicate sample taken at top of screened interval.

Blue Highlighting Indicates Analyte Detected Above MCL/PCL

Note: Some samples may have been diluted due to the concentration(s) of one or more analytes exceeding the upper limit of the calibration curve.

J - Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.

MCL - Maximum Contaminant Level

mg/L - milligrams per liter

NA - not analyzed

PCL – Texas Residential Groundwater protective concentration level

U - Undetected: The analyte was analyzed for, but not detected.

UJ - The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

ug/L - micrograms per liter

Location IDs containing "F" indicate sample filtered in the field with 10 micron filter.

Location IDs containing "FD" indicate duplicate samples.

Location IDs containing "B" indicate sample taken at bottom of screened interval and "T" indicate sample taken at top of screened interval.

Blue Highlighting Indicates Analyte Detected Above MCL/PCL

Note: Some samples may have been diluted due to the concentration(s) of one or more analytes exceeding the upper limit of the calibration curve.

J - Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.

MCL - Maximum Contaminant Level

mg/L - milligrams per liter

NA - not analyzed

PCL – Texas Residential Groundwater protective concentration level

U - Undetected: The analyte was analyzed for, but not detected.

UJ - The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

ug/L - micrograms per liter

Location IDs containing "F" indicate sample filtered in the field with 10 micron filter.

Location IDs containing "FD" indicate duplicate samples.

Location IDs containing "B" indicate sample taken at bottom of screened interval and "T" indicate sample taken at top of screened interval.

Blue Highlighting Indicates Analyte Detected Above MCL/PCL

Note: Some samples may have been diluted due to the concentration(s) of one or more analytes exceeding the upper limit of the calibration curve.

J - Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.

MCL - Maximum Contaminant Level

mg/L - milligrams per liter

NA - not analyzed

PCL – Texas Residential Groundwater protective concentration level

U - Undetected: The analyte was analyzed for, but not detected.

UJ - The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

ug/L - micrograms per liter

Location IDs containing "F" indicate sample filtered in the field with 10 micron filter.

Location IDs containing "FD" indicate duplicate samples.

Location IDs containing "B" indicate sample taken at bottom of screened interval and "T" indicate sample taken at top of screened interval.

Blue Highlighting Indicates Analyte Detected Above MCL/PCL

Note: Some samples may have been diluted due to the concentration(s) of one or more analytes exceeding the upper limit of the calibration curve.

J - Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.

MCL - Maximum Contaminant Level

mg/L - milligrams per liter

NA - not analyzed

PCL – Texas Residential Groundwater protective concentration level

U - Undetected: The analyte was analyzed for, but not detected.

UJ - The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

ug/L - micrograms per liter

Location IDs containing "F" indicate sample filtered in the field with 10 micron filter.

Location IDs containing "FD" indicate duplicate samples.

Location IDs containing "B" indicate sample taken at bottom of screened interval and "T" indicate sample taken at top of screened interval.

Blue Highlighting Indicates Analyte Detected Above MCL/PCL

Note: Some samples may have been diluted due to the concentration(s) of one or more analytes exceeding the upper limit of the calibration curve.

J - Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.

MCL - Maximum Contaminant Level

mg/L - milligrams per liter

NA - not analyzed

PCL – Texas Residential Groundwater protective concentration level

U - Undetected: The analyte was analyzed for, but not detected.

UJ - The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

ug/L - micrograms per liter

Location IDs containing "F" indicate sample filtered in the field with 10 micron filter.

Location IDs containing "FD" indicate duplicate samples.

Location IDs containing "B" indicate sample taken at bottom of screened interval and "T" indicate sample taken at top of screened interval.

Blue Highlighting Indicates Analyte Detected Above MCL/PCL

Note: Some samples may have been diluted due to the concentration(s) of one or more analytes exceeding the upper limit of the calibration curve.

J - Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.

MCL - Maximum Contaminant Level

mg/L - milligrams per liter

NA - not analyzed

PCL – Texas Residential Groundwater protective concentration level

U - Undetected: The analyte was analyzed for, but not detected.

UJ - The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

ug/L - micrograms per liter

4 SUMMARY, CONCLUSIONS AND RECOMMENDATIONS

The information presented in this report was based on the LHAAP-18/24 Supplemental PSI WP (AECOM, 2015) that was reviewed by and concurrence was obtained from the TCEQ and the USEPA before implementation.

4.1 Summary

The following conclusions can be drawn from this investigation:

1. The information collected during this investigation achieved the objectives of the Supplemental PSI WP.
2. The lithology data collected in 2016 confirmed the updated CSM model and presence of Wilcox clay layer in the southern corner of the site, as well as northwest of the site in 18CPTMW19SW. The depth to the clay varied in the southern investigation area of the site from approximately 36 ft in the north (18DPT07) to 11.5 ft to the south (18DPT09). In the northwest area of the site in 18CPTMW23SW and 18WW25 in proximity to Harrison Bayou, the Wilcox clay layer was not encountered.
3. Discrete soil data in the southern portion of the site within the containment area revealed relatively low (101 Õg/kg in 18DPT04 at 5.5 ft bgs) to nondetectable concentrations of perchlorate in the vadose zone. In the shallow saturated zone, the highest concentration of perchlorate was detected in 18DPT04 at 36.5-37.0 ft bgs at 3,200 Õg/kg and below the MSC of 7,200 Õg/kg. Therefore, there is no particular source of perchlorate identified in the vadose or shallow saturated zone in the southern portion of the containment area.
4. Discrete soil data outside the southern portion of the containment area revealed relatively low (5.53 Õg/kg in 18DPT12 at 5-5.5 ft bgs) to nondetectable concentrations of perchlorate in the vadose zone. In the shallow saturated zone, the concentrations of perchlorate were typically low increasing in depth the closer the samples were to the Wilcox clay. The higher concentrations of perchlorate in the shallow saturated zone were detected in 18DPT03 (3,290 Õg/kg at 14.5-15 ft bgs), 18DPT15 (3,440 Õg/kg at 21-21.5 ft bgs), and 18DPT11 (3,940 Õg/kg at 20-20.5 ft bgs). These elevated concentrations of perchlorate were found in the coarser materials (sand) just above the Wilcox clay, but were below the MSC of 7,200 Õg/kg. Therefore, there is no particular source of perchlorate identified in the vadose or shallow saturated zone outside the southern portion of the containment area.
5. The highest perchlorate concentrations in the Wilcox clay were detected in the borehole of monitoring well 18CPTMW22DW at 9,440 Õg/kg at 29.5-30 ft bgs and 18DPT12 at 15,900 Õg/kg at 18-18.5 ft bgs (exceeding MSC of 7,200 Õg/kg). The elevated concentrations of perchlorate in 18DPT12 in the Wilcox clay may represent perchlorate that had migrated via groundwater to this location prior to installation of the groundwater extraction system.
6. Below the Wilcox clay and within the Wilcox sands in the southern portion of the site, the concentration of perchlorate generally decreases with the exception of 18DPT17 located within the containment area adjacent to the southwestern boundary.

7. Monitoring Well 18CPTMW19SW ï Low concentrations of perchlorate were reported in this boring with the highest concentration reported at 50-50.5 ft bgs at 170 Õg/kg in the Wilcox sand. The Wilcox clay appears to extend from 20.3 ft bgs to 41.4 ft bgs. The bottom soil sample at 60-61 ft bgs was < 2.54 Õg/kg for perchlorate providing vertical delineation.

8. Monitoring Well 18CPTMW23SW - relatively low concentrations of perchlorate were detected at 5-5.5 ft bgs, 10-10.5 ft bgs and 20-20.5 ft bgs at 19.6 Õg/kg , 1,920 Õg/kg, and 29.3 Õg/kg, respectively. At depths of 30-30.4 ft bgs, 40-40.5 ft bgs, 50-50.5 ft bgs, and 60-60.5 ft bgs perchlorate concentrations were below the detection limits, providing vertical delineation. Saturated conditions were observed at the surface and throughout the borehole as the area had previously been subjected to flooding due to heavy rains. Wilcox clay was not identified in this area of the site.

9. 18WW25 ï no perchlorate was detected in any of the analyzed soil samples at 3.5-4 ft bgs, 9.5-10 ft bgs, 14.5-15 ft bgs, 19.5-20 ft bgs, and 22-22.5 ft bgs. This well provides lateral extent delineation. Saturation at this location was encountered at approximately 2 ft bgs during drilling. The Wilcox clay was not identified.

10. VOC data was analyzed from the same soil samples collected for perchlorate analysis. The results indicated sporadic detection of VOCs with all concentrations below the VOC MSCs.

11. Groundwater elevation data in the Shallow Zone confirmed the presence of a groundwater high near AWD-2/123, similar to previous observations. Another groundwater high was identified to the south of the site in new Shallow Zone monitoring well 18CPTMW22R. This groundwater high substantiated the high historical groundwater elevations observed in adjacent well MW-20. The Wilcox Formation groundwater elevations indicate the presence of a groundwater high in the vicinity of MW-14 in the northwest area of the site, also consistent with previous observations.

12. New upper Wilcox Formation wells 18CPTMW19SW and 18CPTMW23SW and deep Wilcox Formation well 18CPTMW22DW provided additional vertical groundwater gradient information. Downward vertical gradients were observed between the Shallow Zone and upper Wilcox Formation in co-located wells 18CPTMW19/18CPTMW19SW and 18CPTMW23/18CPTMW23SW. However, an upward vertical gradient was observed between 18CPTMW22DW and new upper Wilcox Formation well 18CPTMW22SW.

13. Groundwater concentration data for perchlorate, TCE, MC, and 1,4-dioxane were collected and displayed as isoconcentration maps. The lateral extent of perchlorate, TCE, MC, and 1,4-dioxane in the Shallow Zone and in the Wilcox Formation has been determined with two exceptions. 1,4-Dioxane in MW-16 near Harrison Bayou had a concentration of 18 µg/L, exceeding the 1,4-dioxane PCL of 9.1 µg/L. The TCE result of 14.1 µg/L at MW-18, located to the southwest of the site, exceeded the MCL of 5 µg/L. New Shallow Zone monitoring well 18CPTMW26 located between LHAAP-18/24 and LHAAP-17 did not have sufficient water to collect a groundwater sample.

4.2 Conclusions

The following conclusions can be made based on the results of this investigation:

- No source of perchlorate was identified in the vadose zone soil or Shallow Zone groundwater outside or within the southern portion of the containment area.
- Perchlorate did not migrate to LHAAP-17 from LHAAP-18/24, based on low or non-detectable soil concentrations from 18CPTMW26, 18CPTMW26SW, and 18DP08.
- All VOC concentrations in soil were below the soil MSCs. Therefore, VOCs in the soil are not considered COCs in the southern area of the site.
- The Shallow Zone and Wilcox Formation wells define the lateral and vertical extent of perchlorate and VOCs above PCLs/MCLs in Shallow Zone and Wilcox Formation groundwater with the following exceptions: lateral extent of TCE in MW-18 in the Shallow Zone; vertical extent of perchlorate in the Wilcox Formation in MW-14 and 18CPTMW08DW.

4.3 Recommendations

The soil investigation results achieved the objectives of the work and no data gaps are identified. Accordingly, no further investigation of perchlorate concentrations in soil is recommended. The groundwater investigation results achieved the objectives of the work and provided lateral and vertical delineation of COCs in Shallow Zone and Wilcox Formation groundwater in the vicinity of the seven new wells. Groundwater samples will be collected from the site including monitoring well 18CPTMW26 during future semi-annual sampling events.

Table 3: Qualified Analytical Data

1 INTRODUCTION

AECOM reviewed 37 data packages from Microbac Laboratory Services, Marietta, OH. Groundwater and soil samples were collected February 24 through June 29, 2016 at LHAAP-18/24 at Longhorn Army Ammunition Plant (LHAAP), Karnack, Texas. Data were reviewed for conformance to the requirements of the following guidance documents: Automated Data Review by Laboratory Data Consultants (ADR.net), United States Environmental Protection Agency (EPA) Contract Laboratory Program National Functional Guidelines for Inorganic Data Review, (EPA, July 2002), and EPA Contract Laboratory Program National Functional Guidelines for Low Concentration Organic Data Review, (EPA, June 2001).

1.1 Intended Use of Data

The objective of this sampling event was to collect data to determine the extent of contaminants of concern at LHAAP-18/24.

Analyses requested included:

- SW6850 ï Perchlorates by LC/MS/MS
- SW8260- Volatiles by GC/MS
- SW6010 ï Al, Se, and Fe by ICP
- SW6020 ï As, Ba, Cd, Cr, Co, Pb, Mn, Ni, Ag, Se, V, Zn by ICP/MS
- 7470A- Hg by cold vapor atomic absorption
- SW8270- 1,4-dioxane by GC/MS

Table 2 lists the sample identifications and their associated laboratory identifications. **Table 3** lists qualified results with the associated quality control parameter that was exceeded.

1.2 Preservation and Holding Times

Sample identification data were evaluated for agreement with the chain-of-custody (COC). All samples were received in appropriate containers, within the proper temperature range, in good condition, and with the required signatures.

Sample L16061142-07 was analyzed 23 days after collection and therefore concentrations of all analytes are estimated (UJ/J).

Table 3 shows qualified analytical data.

1.3 Calibrations

Initial calibration criteria modification includes RSD< or = to 30%, two compounds allowed up to 40%. If the continuing calibration verification (CCV) compound exceeds 30% drift, the compound is checked in the LCS, if both are outside recovery limits, the compound is rejected, R. If only the CCV exceeds recovery criteria and is less than Ñ40% drift, then the compound is qualified J or UJ.

Table 3 shows qualified analytical data.

1.3.1 Continuing Calibration Verification (CCV)

1.3.1.1 SW8260

CCV WG572347-02 in SDG L16060411 has recoveries for bromomethane and naphthalene of 72% and 79.8%, respectively. These recoveries are below the 80% criteria for CCVs. The associated samples did not have reported concentrations of these analytes above the limit of detection (LOD) and therefore the concentrations are estimated (UJ).

CCV WG572507-02 in SDG L16060504 has recoveries for acetone, 2-butanone, 1,2-dibromo-3-chloropropane, and 2-hexanone of 65.4%, 70.8%, 69.6%, and 75.4%, respectively. These recoveries are below the 80% criteria for CCVs. The associated samples did not have reported concentrations of these analytes above the limit of detection (LOD) and therefore the concentrations are estimated (UJ).

CCV WG572735-02 in SDGs L16060615 and L16060616 has a recovery for bromomethane of 77.2%. This is below the 80% criteria for CCVs. The associated samples did not have reported concentrations of bromomethane above the limit of detection (LOD) and therefore the concentrations are estimated (UJ).

CCV WG573037-02 in SDGs L16060616, L16060730, and L16060823 has a recovery for bromomethane of 74%. This is below the 80% criteria for CCVs. The associated samples did not have reported concentrations of bromomethane above the limit of detection (LOD) and therefore the concentrations are estimated (UJ).

CCV WG573258-02 in SDG L16060650 has a recovery for 2-hexanone of 78.6%. This is below the 80% criteria for CCVs. The associated samples did not have reported concentrations of bromomethane above the limit of detection (LOD) and therefore the concentrations are estimated (UJ).

CCV WG573770-02 in SDG L16060927 has a recovery for bromomethane of 73.4%. This is below the 80% criteria for CCVs. The associated samples did not have reported concentrations of bromomethane above the limit of detection (LOD) and therefore the concentrations are estimated (UJ).

CCV WG573773-02 in SDG L16061026 has a recovery for 2-hexanone of 77.4%. This is below the 80% criteria for CCVs. The associated samples did not have reported concentrations of bromomethane above the limit of detection (LOD) and therefore the concentrations are estimated (UJ).

CCV WG575085-02 in SDG L16061290 has recoveries for acetone, 2-butanone, 1,2-dibromo-3-chloropropane, 1,2-dichloroethane and 2-hexanone of 66.6%, 71.4%, 74.6%, 78.8% and 71.8%, respectively. These recoveries are below the 80% criteria for CCVs. The associated samples did not have reported concentrations of these analytes above the limit of detection (LOD) and therefore the concentrations are estimated (UJ).

CCV WG575198-02 in SDGs L16061290, L16061452 and L16061453 has recoveries for acetone and 2-butanone of 78.8% and 79.4%, respectively. This is below the 80% criteria for CCVs. The associated samples did not have reported concentrations of bromomethane above the limit of detection (LOD) and therefore the concentrations are estimated (UJ).

CCV WG575663-02 in SDG L16061648 has a recovery for bromomethane of 79%. This is below the 80% criteria for CCVs. The associated samples did not have reported concentrations of bromomethane above the limit of detection (LOD) and therefore the concentrations are estimated (UJ).

Table 3 shows qualified analytical data.

1.4 Blanks

Where contamination by a target analyte of one of the various blanks was found, if the sample result for an associated sample was non-detect or less than 5X (10X for common laboratory contaminants) the analyte concentration in the blank, the corresponding sample result for the analyte was qualified B. Where the sample result for the affected analyte was greater than 5X the amount in the blank, no qualifier was applied.

All blanks are within criteria.

1.5 Surrogates

A recovery of 121% was reported for surrogate 1,2-dichloroethane-d4 in samples L16060730-03, L16060823-01, and L16060823-04 in SDGs L16060730 and L16060823. Recoveries are above the upper control limit of 120% and therefore reported concentrations for all analytes are estimated (UJ/J).

A recovery of 122% was reported for surrogate 1,2-dichloroethane-d4 in samples L16061142-02, L16061142-06 in SDGL16061142. Recoveries are above the upper control limit of 120% and therefore reported concentrations for all analytes are estimated (UJ/J).

A recovery of 123% was reported for surrogate 1,2-dichloroethane-d4 in sample L16061144-02 in SDG L16061144. Recoveries are above the upper control limit of 120% and therefore reported concentrations for all analytes are estimated (UJ/J).

Table 3 shows qualified analytical data.

1.6 Laboratory Control Sample (LCS)

The relative percent difference (RPD) for 1,4-dioxne between LCS WG573812-02 and LCSD WG573812-03 in SDGs L16061142 and L16061144 was 61.5% which is greater than the RPD limit of 30%. The associated samples reported concentrations below the LOD and therefore concentrations are estimated (UJ).

The percent recovery (%R) for 1,1-dichloroethene in LCS WG575129-02 was 69.5% in SDG L16061289. The lower control limit for 1,1-dichloroethene is 70% and the associated sample reported a concentration below the LOD, therefore the concentration is estimated (UJ).

The percent recoveries (%R) for 1,1-dichloroethene in LCS WG575199-02 and LCSD WG575199-03 were 54.9% and 54.7%, respectively, in SDGs L16061290, L16061452 and L1606143. The lower control limit for 1,1-dichloroethene is 70% and the associated samples reported concentrations below the LOD, therefore concentrations are estimated (UJ).

The percent recoveries (%R) for dichlorodifluoromethane in LCS WG575199-02 and LCSD WG575199-03 were 10.7% and 10.5%, respectively, in SDGs L16061290, L16061452 and

L1606143. The lower control limit for dichlorodifluoromethane is 30% and the associated samples reported concentrations below the LOD, therefore concentrations are estimated (UJ).

The percent recoveries (%R) for 2,2-dichloropropane in LCS WG575086-02 and LCSD WG575086-03 were 67.2% and 68.8%, respectively, in SDG L16061290. The lower control limit for 2,2-dichloropropane is 70% and the associated samples reported concentrations below the LOD, therefore concentrations are estimated (UJ).

The percent recoveries (%R) for chloromethane in LCS WG575199-02 and LCSD WG575199-03 were 31.1% and 30.9%, respectively, in SDGs L16061452 and L16061453. The lower control limit for chloromethane is 40% and the associated samples reported concentrations below the LOD, therefore concentrations are estimated (UJ).

The percent recoveries (%R) for vinyl chloride in LCS WG575199-02 and LCSD WG575199-03 were 31.1% and 30.9%, respectively, in SDGs L16061452 and L16061453. The lower control limit for vinyl chloride is 50% and the associated samples reported concentrations below the LOD, therefore concentrations are estimated (UJ).

Table 3 shows qualified analytical data.

1.7 Duplicates

Field duplicates were taken at a rate of 1 per every 20 samples. All duplicate recoveries were within the acceptable range of ≤30% for groundwater matrices and ≤50% for soil matrices.

1.7.1.1 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

The MS/MSD for sample L16021306-02 in SDG L16021306 had RPDs that were outside of control limits for 1,1,2,2-tetrachloroethane, 1,2,3-trichlorobenzene, 1,2,4-trichlorobenzene, 1,2,4-trimethylbenzene, 1,2-dibromo-3-chloropropane, 1,2-dichlorobenzene, 1,3-dichlorobenzene, 1,4-dichlorobenzene, 2-chlorotoluene and bromobenzene. L16021306-02 had concentrations of these analytes below the LOD and therefore the concentrations are estimated (UJ).

The MS/MSD for sample L16061068-13 in SDG L16061068 had RPDs that were outside of control limits for sodium, chromium, barium, and manganese and therefore reported concentrations are estimated (UJ/J).

Table 3 shows qualified analytical data.

2 DATA USABILITY SUMMARY

The data are usable for the intended purposes of the project. The data quality objectives have been met for the project.

Table 1: Completeness by Method

Microbac

Laboratory Report Number: L16021240

Kayla Teague
AECOM Technical Services, Inc.
16000 Dallas Parkway
Dallas, TX 75248

Please find enclosed the analytical results for the samples you submitted to Microbac Laboratories. Review and compilation of your report was completed by Microbac's Ohio Valley Division (OVD). If you have any questions, comments, or require further assistance regarding this report, please contact your service representative listed below.

Laboratory Contact:
Stephanie Mossburg – Team Chemist/Data Specialist
(740) 373-4071
Stephanie.Mossburg@microbac.com

I certify that all test results meet all of the requirements of the DoD QSM and other applicable contract terms and conditions. Any exceptions are attached to this cover page or addressed in the method narratives presented in the report. All results for soil samples are reported on a 'dry-weight' basis unless specified otherwise. Analytical results for water and wastes are reported on a 'as received' basis unless specified otherwise. A statement of uncertainty for each analysis is available upon request. This laboratory report shall not be reproduced, except in full, without the written approval of Microbac Laboratories, DoD ELAP certification number 2936.01. The reported results are related only to the samples analyzed as received.

This report was certified on March 02 2016

David Vandenberg – Managing Director

State of Origin: TX
Accrediting Authority: Texas Commission on Environmental Quality ID:T104704252-07-TX
QAPP: DOD Ver 4.1

Project Name: Longhorn Army Ammunition
Lab Contact: Stephanie Mossburg

Record of Sample Receipt and Inspection

Comments/Discrepancies

This is the record of the shipment conditions and the inspection records for the samples received and reported as a sample delivery group (SDG). All of the samples were inspected and observed to conform to our receipt policies, except as noted below.

There were no discrepancies.

Discrepancy	Resolution

Coolers

Cooler #	Temperature Gun	Temperature	COC #	Airbill #	Temp Required?
00112730	I	0.0		J4599413984	X

Inspection Checklist

#	Question	Result
1	Were shipping coolers sealed?	Yes
2	Were custody seals intact?	Yes
3	Were cooler temperatures in range of 0-6?	Yes
4	Was ice present?	Yes
5	Were COC's received/information complete/signed and dated?	Yes
6	Were sample containers intact and match COC?	Yes
7	Were sample labels intact and match COC?	Yes
8	Were the correct containers and volumes received?	Yes
9	Were samples received within EPA hold times?	Yes
10	Were correct preservatives used? (water only)	NA
11	Were pH ranges acceptable? (voa's excluded)	NA
12	Were VOA samples free of headspace (less than 6mm)?	NA

Prep Batch Number(s):	558910,559002	**Reviewer Name:**	Sarah Vandenberg
LRC Date:	2016-02-29 00:00:00		

Description	Yes	No	NA	NR	ER#
Chain-of-custody (C-O-C)					
Did samples meet the laboratory's standard conditions of sample acceptability upon receipt?	X				
Were all departures from standard conditions described in an exception report?	X				
Sample and quality control (QC) identification	X				
Are all field sample ID numbers cross-referenced to the laboratory ID numbers?	X				
Are all laboratory ID numbers cross-referenced to the corresponding QC data?	X				
Test reports					
Were all samples prepared and analyzed within holding times?	X				
Other than those results < MQL, were all other raw values bracketed by calibration standards?	X				
Were calculations checked by a peer or supervisor?	X				
Were all analyte identifications checked by a peer or supervisor?	X				
Were sample detection limits reported for all analytes not detected?	X				
Were all results for soil and sediment samples reported on a dry weight basis?	X				
Were % moisture (or solids) reported for all soil and sediment samples?	X				
Were bulk soils/solids samples for volatile analysis extracted with methanol per SW846 Method 5035?			X		
If required for the project, are TICs reported?			X		
Surrogate recovery data					
Were surrogates added prior to extraction?	X				
Were surrogate percent recoveries in all samples within the laboratory QC limits?	X				
Test reports/summary forms for blank samples	X				
Were appropriate type(s) of blanks analyzed?	X				
Were blanks analyzed at the appropriate frequency?	X				
Were method blanks taken through the entire analytical process, including preparation and, if applicable, cleanup procedures?	X				
Were blank concentrations < MQL?	X				
Laboratory control samples (LCS):					
Were all COCs included in the LCS?	X				
Was each LCS taken through the entire analytical procedure, including prep and cleanup steps?	X				
Were LCSs analyzed at the required frequency?	X				

Texas Risk Reduction Program (TRRP) Checklist

Laboratory Name:	Microbac OVD	**Laboratory Log Number:**	L16021240
Project Name:		**Method:**	8260
Prep Batch Number(s):	558910,559002	**Reviewer Name:**	Sarah Vandenberg
LRC Date:	2016-02-29 00:00:00		

Were LCS (and LCSD, if applicable) %Rs within the laboratory QC limits?		X			1
Does the detectability check sample data document the laboratory's capability to detect the COCs at the MDL used to calculate the SDLs?	X				
Was the LCSD RPD within QC limits?	X				
Matrix spike (MS) and matrix spike duplicate (MSD) data					
Were the project/method specified analytes included in the MS and MSD?			X		
Were MS/MSD analyzed at the appropriate frequency?			X		
Were MS (and MSD, if applicable) %Rs within the laboratory QC limits?			X		
Were MS/MSD RPDs within laboratory QC limits?			X		
Analytical duplicate data					
Were appropriate analytical duplicates analyzed for each matrix?			X		
Were analytical duplicates analyzed at the appropriate frequency?			X		
Were RPDs or relative standard deviations within the laboratory QC limits?			X		
Method quantitation limits (MQLs):					
Are the MQLs for each method analyte included in the laboratory data package?	X				
Do the MQLs correspond to the concentration of the lowest non-zero calibration standard?	X				
Are unadjusted MQLs and DCSs included in the laboratory data package?	X				
Other problems/anomalies					
Are all known problems/anomalies/special conditions noted in this LRC and ER?	X				
Was applicable and available technology used to lower the SDL to minimize the matrix interference effects on the sample results?	X				
Is the laboratory NELAC-accredited under the Texas Laboratory Accreditation Program for the analytes, matrices and methods associated with this laboratory data package?	X				
Initial calibration (ICAL)					
Were response factors and/or relative response factors for each analyte within QC limits?	X				
Were percent RSDs or correlation coefficient criteria met?	X				
Was the number of standards recommended in the method used for all analytes?	X				
Were all points generated between the lowest and highest standard used to calculate the curve?	X				
Are ICAL data available for all instruments used?	X				
Has the initial calibration curve been verified using an appropriate second source standard?	X				

Microbac

Texas Risk Reduction Program (TRRP) Checklist

Laboratory Name:	Microbac OVD	**Laboratory Log Number:**	L16021240
Project Name:		**Method:**	8260
Prep Batch Number(s):	558910,559002	**Reviewer Name:**	Sarah Vandenberg
LRC Date:	2016-02-29 00:00:00		

Initial and continuing calibration verification (ICCV and CCV) and continuing calibration blank (CCB):					
Was the CCV analyzed at the method-required frequency?	X				
Were percent differences for each analyte within the method-required QC limits?	X				
Was the ICAL curve verified for each analyte?		X			2
Was the absolute value of the analyte concentration in the inorganic CCB < MDL?			X		
Mass spectral tuning					
Was the appropriate compound for the method used for tuning?	X				
Were ion abundance data within the method-required QC limits?	X				
Internal standards (IS)					
Were IS area counts and retention times within the method-required QC limits?	X				
Raw data (NELAC Section 5.5.10)					
Were the raw data (for example, chromatograms, spectral data) reviewed by an analyst?	X				
Were data associated with manual integrations flagged on the raw data?	X				
Dual column confirmation					
Did dual column confirmation results meet the method-required QC?			X		
Tentatively identified compounds (TICs)					
If TICs were requested, were the mass spectra and TIC data subject to appropriate checks?			X		
Interference Check Sample (ICS) results					
Were percent recoveries within method QC limits?			X		
Serial dilutions, post digestion spikes, and method of standard additions					
Were percent differences, recoveries, and the linearity within the QC limits specified in the method?			X		
Method detection limit (MDL) studies					
Was a MDL study performed for each reported analyte?	X				
Is the MDL either adjusted or supported by the analysis of DCSs?	X				
Proficiency test reports					
Was the laboratory's performance acceptable on the applicable proficiency tests or evaluation studies?	X				
Standards documentation					
Are all standards used in the analyses NIST-traceable or obtained from other appropriate sources?	X

Compound/analyte identification procedures					
Are the procedures for compound/analyte identification documented?	X				
Demonstration of analyst competency (DOC)					
Was DOC conducted consistent with NELAC Chapter 5?	X				
Is documentation of the analyst's competency up-to-date and on file?	X				
Verification/validation documentation for methods (NELAC Chapter 5)					
Are all the methods used to generate the data documented, verified, and validated, where applicable?	X				
Laboratory standard operating procedures (SOPs)					
Are laboratory SOPs current and on file for each method performed	X				

1. Items identified by the letter “R” must be included in the laboratory data package submitted in the TRRP-required report(s). Items identified by the letter “S” should be retained and made available upon request for the appropriate retention period;

2. O = organic analyses; I = inorganic analyses (and general chemistry, when applicable);

3. NA = Not applicable;

4. NR = Not reviewed;

5. ER# = Exception Report identification number (an Exception Report should be completed for an item if “NR” or “No” is checked).

The Exception Report for each “No” or “Not Reviewed (NR)” item in Laboratory Review Checklist and for each analyte, matrix, and method for which the laboratory does not hold NELAC accreditation under the Texas Laboratory Accreditation Program.

Release Statement: I am responsible for the release of this laboratory data package. This laboratory is NELAC accredited under the Texas Laboratory Accreditation Program for all the methods, analytes, and matrices reported in this data package except as noted in the Exception Reports. The data have been reviewed and are technically compliant with the requirements of the methods used, except where noted by the laboratory in the Exception Reports. By my signature below, I affirm to the best of my knowledge all problems/anomalies observed by the laboratory have been identified in the Laboratory Review Checklist, and no information affecting the quality of the data has been knowingly withheld.

Check, if applicable: [ ] This laboratory meets an exception under 30 TAC §25.6 and was last inspection by [ ] TCEQ or [ ] _____ on **(enter date of last inspection**). Any findings affecting the data in this laboratory data package are noted in the Exception Reports herein. The official signing the cover page of the report in which these data are used is responsible for releasing this data package and is by signature affirming the above release statement is true.

Exceptions Report

1)Dichlorodifluoromethane and Vinyl chloride exceeded the UCL in the LCS/LCS2 analyzed 02/26/16 on HPMS9. Dichlorodifluoromethane exceeded the UCL in the LCS analyzed 02/28/16 on HPMS9.
2)Dichlorodifluoromethane exceeded the UCL in ICV analyzed 02/25/16 on HPMS9.

Other than those results < MQL, were all other raw values bracketed by calibration standards?			X		
Were calculations checked by a peer or supervisor?	X				
Were all analyte identifications checked by a peer or supervisor?			X		
Were sample detection limits reported for all analytes not detected?			X		
Were all results for soil and sediment samples reported on a dry weight basis?	X				
Were % moisture (or solids) reported for all soil and sediment samples?	X				
Were bulk soils/solids samples for volatile analysis extracted with methanol per SW846 Method 5035?			X		
If required for the project, are TICs reported?			X		
Surrogate recovery data					
Were surrogates added prior to extraction?			X		
Were surrogate percent recoveries in all samples within the laboratory QC limits?			X		
Test reports/summary forms for blank samples					
Were appropriate type(s) of blanks analyzed?			X		
Were blanks analyzed at the appropriate frequency?			X		
Were method blanks taken through the entire analytical process, including preparation and, if applicable, cleanup procedures?			X		
Were blank concentrations < MQL?			X		
Laboratory control samples (LCS):			X		
Were all COCs included in the LCS?			X		

Texas Risk Reduction Program (TRRP) Checklist

Laboratory Name:	Microbac OVD	**Laboratory Log Number:**	L16021240
Project Name:		**Method:**	PCT-S
Prep Batch Number(s):	WG558757	**Reviewer Name:**	Deanna Hesson
LRC Date:	2016-02-26 00:00:00		

Was each LCS taken through the entire analytical procedure, including prep and cleanup steps?			X		
Were LCSs analyzed at the required frequency?			X		
Were LCS (and LCSD, if applicable) %Rs within the laboratory QC limits?			X		
Does the detectability check sample data document the laboratory's capability to detect the COCs at the MDL used to calculate the SDLs?			X		
Was the LCSD RPD within QC limits?			X		
Matrix spike (MS) and matrix spike duplicate (MSD) data					
Were the project/method specified analytes included in the MS and MSD?			X		
Were MS/MSD analyzed at the appropriate frequency?			X		
Were MS (and MSD, if applicable) %Rs within the laboratory QC limits?			X		
Were MS/MSD RPDs within laboratory QC limits?			X		
Analytical duplicate data					
Were appropriate analytical duplicates analyzed for each matrix?	X				
Were analytical duplicates analyzed at the appropriate frequency?	X				
Were RPDs or relative standard deviations within the laboratory QC limits?	X				
Method quantitation limits (MQLs):					
Are the MQLs for each method analyte included in the laboratory data package?			X		
Do the MQLs correspond to the concentration of the lowest non-zero calibration standard?			X		
Are unadjusted MQLs and DCSs included in the laboratory data package?			X		
Other problems/anomalies					
Are all known problems/anomalies/special conditions noted in this LRC and ER?	X				
Was applicable and available technology used to lower the SDL to minimize the matrix interference effects on the sample results?			X		
Is the laboratory NELAC-accredited under the Texas Laboratory Accreditation Program for the analytes, matrices and methods associated with this laboratory data package?	X				
Initial calibration (ICAL)					
Were response factors and/or relative response factors for each analyte within QC limits?			X		
Were percent RSDs or correlation coefficient criteria met?			X		

Microbac

Texas Risk Reduction Program (TRRP) Checklist

Laboratory Name:	Microbac OVD	**Laboratory Log Number:**	L16021240
Project Name:		**Method:**	PCT-S
Prep Batch Number(s):	WG558757	**Reviewer Name:**	Deanna Hesson
LRC Date:	2016-02-26 00:00:00		

Was the number of standards recommended in the method used for all analytes?			X		
Were all points generated between the lowest and highest standard used to calculate the curve?			X		
Are ICAL data available for all instruments used?			X		
Has the initial calibration curve been verified using an appropriate second source standard?			X		
Initial and continuing calibration verification (ICCV and CCV) and continuing calibration blank (CCB):					
Was the CCV analyzed at the method-required frequency?			X		
Were percent differences for each analyte within the method-required QC limits?			X		
Was the ICAL curve verified for each analyte?			X		
Was the absolute value of the analyte concentration in the inorganic CCB < MDL?			X		
Mass spectral tuning					
Was the appropriate compound for the method used for tuning?			X		
Were ion abundance data within the method-required QC limits?			X		
Internal standards (IS)					
Were IS area counts and retention times within the method-required QC limits?			X		
Raw data (NELAC Section 5.5.10)			X		
Were the raw data (for example, chromatograms, spectral data) reviewed by an analyst?	X				
Were data associated with manual integrations flagged on the raw data?			X		
Dual column confirmation					
Did dual column confirmation results meet the method-required QC?			X		
Tentatively identified compounds (TICs)			X		
If TICs were requested, were the mass spectra and TIC data subject to appropriate checks?			X		
Interference Check Sample (ICS) results					
Were percent recoveries within method QC limits?			X		
Serial dilutions, post digestion spikes, and method of standard additions			X		
Were percent differences, recoveries, and the linearity within the QC limits specified in the method?			X		
Method detection limit (MDL) studies

Texas Risk Reduction Program (TRRP) Checklist

Laboratory Name:	Microbac OVD	**Laboratory Log Number:**	L16021240
Project Name:		**Method:**	PCT-S
Prep Batch Number(s):	WG558757	**Reviewer Name:**	Deanna Hesson
LRC Date:	2016-02-26 00:00:00		

Was a MDL study performed for each reported analyte?			X		
Is the MDL either adjusted or supported by the analysis of DCSs?			X		
Proficiency test reports					
Was the laboratory's performance acceptable on the applicable proficiency tests or evaluation studies?	X				
Standards documentation					
Are all standards used in the analyses NIST-traceable or obtained from other appropriate sources?			X		
Compound/analyte identification procedures					
Are the procedures for compound/analyte identification documented?	X				
Demonstration of analyst competency (DOC)					
Was DOC conducted consistent with NELAC Chapter 5?	X				
Is documentation of the analyst's competency up-to-date and on file?	X				
Verification/validation documentation for methods (NELAC Chapter 5)	X				
Are all the methods used to generate the data documented, verified, and validated, where applicable?	X				
Laboratory standard operating procedures (SOPs)					
Are laboratory SOPs current and on file for each method performed	X				

1. Items identified by the letter “R” must be included in the laboratory data package submitted in the TRRP-required report(s). Items identified by the letter “S” should be retained and made available upon request for the appropriate retention period;
2. O = organic analyses; I = inorganic analyses (and general chemistry, when applicable);
3. NA = Not applicable;
4. NR = Not reviewed;
5. ER# = Exception Report identification number (an Exception Report should be completed for an item if “NR” or “No” is checked).

The Exception Report for each “No” or “Not Reviewed (NR)” item in Laboratory Review Checklist and for each analyte, matrix, and method for which the laboratory does not hold NELAC accreditation under the Texas Laboratory Accreditation Program.

Release Statement: I am responsible for the release of this laboratory data package. This laboratory is NELAC accredited under the Texas Laboratory Accreditation Program for all the methods, analytes, and matrices reported in this data package except as noted in the Exception Reports. The data have been reviewed and are technically compliant with

Texas Risk Reduction Program (TRRP) Checklist

Laboratory Name:	Microbac OVD	**Laboratory Log Number:**	L16021240

Lab Report #: L16021240
Lab Project #: 2551.096
Project Name: Longhorn Army Ammunition
Lab Contact: Stephanie Mossburg

Analyte	CAS #	Result	Qual	LOQ	LOD	DL
1,2,4-Trimethylbenzene	95-63-6	1.32	U	6.61	1.32	0.661
1,3,5-Trimethylbenzene	108-67-8	1.32	U	6.61	1.32	0.661
Vinyl chloride	75-01-4	2.64	U	6.61	2.64	1.32
o-Xylene	95-47-6	1.32	U	6.61	1.32	0.661
m-,p-Xylene	179601-23-1	1.32	U	6.61	1.32	0.661

Surrogate	Recovery	Lower Limit	Upper Limit	Q
Dibromofluoromethane	99.4	80	120	
1,2-Dichloroethane-d4	93.6	80	120	
Toluene-d8	111	85	115	
4-Bromofluorobenzene	114	85	120	

J	Estimated value ; the analyte concentration was less than the LOQ.
U	Analyte was not detected. The concentration is below the reported LOD.

2.1.1.2 QC Summary Data

Example 8260 Calculations

1.0 Calculating the Response Factor (RF) from the initial calibration (ICAL) data:

RF = [(Ax) (Cis)] / [(Ais) (Cx)]

where:	Example
Ax = Area of the characteristic ion for the compound being measured:	3399156
Cis = Concentration of the specific internal standard (ug/mL)	25
Ais = Area of the characteristic ion of the specific internal standard	846471
Cx = Concentration of the compound in the standard being measured (ug/mL)	100
RF = Calculated Response Factor	**1.0039**

2.0 Calculating the concentration (C) of a compound in water using the average RF: *

Cx = [(Ax) (Cis) (Vn)(D)] / [(Ais) (RF) (Vs)]

where:	**Example**
Ax = Area of the characteristic ion for the compound being measured	**3122498**
Cis = Concentration of the specific internal standard (ug/L)	**25**
D = Dilution factor for sample as a multiplier (10x = 10)	**1**
Ais = Area of the characteristic ion of the specific internal standard	**611048**
RF = Average RF from the ICAL	**1.004**
Vs = Purge volume of sample (mL)	**10**
Vn = Nominal purge volume of sample (mL) (10.0 mL)	**10**
Cx = Concentration of the compound in the sample being measured (ug/L)	**127.2428**

3.0 Calculating the concentration (C) of a compound in soil using the average RF: *

Cx = [(Ax) (Cis) (Wn)(D)] / [(Ais) (RF) (Ws)]

where:	**Example**
Ax = Area of the characteristic ion for the compound being measured	**3122498**
Cis = Concentration of the specific internal standard (ug/L)	**25**
D = Dilution factor for sample as a multiplier (10x = 10)	**1**
Ais = Area of the characteristic ion of the specific internal standard	**611048**
RF = Average RF from the ICAL	**1.004**
Ws = Weight of sample purged (g)	**5**
Wn = Nominal purge weight (g) (5.0 g)	**5**
Cx = Concentration of the compound in the sample being measured (ug/L)	**127.2428**

Dry weight correction:

Percent solids (PCT_S)	**50**
Cd = (Cx) (100)/PCT_S	**254.4856**

* Concentrations appearing on the instrument quantitation reports are on-column results and do not take into account initial volume, final volume, and the dilution factor.

4.0 Concentration from Linear Regression

Step 1: Retrieve Curve Data From Plot, y = mx + b

y = response ratio = response of analyte / response of IS = Ax/Ais

x = amount ratio = concentration analyte/concentration internal standard = Cx / Cis

m = slope from curve = 0.213

b = intercept from curve = - 0.00642

Step 2: Calculate y from Quantitation Report

y = 86550/593147 = 0.1459

Step 3: Solve for x

x = (y - b)/m = [(0.1459 -(- 0.00642)]/ 0.213 = 0.7152

Step 4: Solve for analyte concentration Cx

Cx = Cis (x) = (25.0)(0.7152) = 17.88

Example Spreadsheet Calculation:

Slope from curve, m:	**0.213**
Intercept from curve, b:	**-0.00642**
Area of analyte, Ax:	**86550**
Area of Internal Standard , Ais:	**593147**
Concentration of IS, Cis	**25.00**
Response Ratio:	**0.145917**
Amount Ratio:	**0.715195**
Concentration:	**17.87988**
Units of Internal Standard:	**ug/L**

5.0 Concentration from Quadratic Regression

Step 1 - Retrieve Curve Data from Plot, y = Ax^2 + Bx + C
Where:
Ax^2 + Bx + (C - y) = 0
A, B, C = constants from the ICAL quadratic regression
y = Response ratio = Area of analyte/Area of internal standard (IS)
x = Amount ratio = Concentration of analyte/concentration of IS

Step 2: Calculate y from Quantitation Report

y = Ax/Ais

Step 3: Solve for x using the quadratic formula
Ax^2 + Bx + C - y = 0

$$x = \frac{b \pm \sqrt{\left(b^2 - 4a(c - y)\right)}}{2a}$$ (Two possible solutions)

Step 4: Solve for analyte concentration Cx

Cx = (Cis)(Amount ratio)

Example Spreadsheet Calculation:

Value of A from plot:	**-0.00629**	
Value of B from plot:	**0.511**	
Value of C from plot:	**-0.0276**	
Area of unknown from quantitation report:	**293821**	
Area of IS from quantiation report:	**784848**	
Response ratio, y:	**0.374367**	
C - y:	**-0.40197**	
Root 1 - Computed amount ratio , X1:	**80.44567**	
Root 2 - Computed amount ratio , X2:	**0.794396**	use this solution
Concentration of IS, Cis:	**25.00**	
Concentration of analyte, Cx:	**19.86**	ug/L

2.2.1.2 QC Summary Data

Example Calculation 6850 - Perchlorate

Concentration from Linear Regression

Step 1: Retrieve Curve Data From Plot, y = mx + b

y = response ratio = response of analyte / response of internal standard (IS) = Rx/Ristd

x = amount ratio = concentration analyte/concentration internal standard (IS) = Cx / Cistd

m = slope from curve (1.45)

b = intercept from curve (-0.00242)

y = 1.45x + -0.00242

Step 2: Substitute the value for y

where y = 12600/226000 = 0.055752

Step 3: Solve for x

x = (y - b)/m = 0.0040119

Step 4: Solve for analyte concentration Cx

Cx = (Cis)(x) = (5 ug/L)(0.040119) = 0.200594 ug/L

Example Calculation - Water:

Slope from curve, m:	1.45
Intercept from curve, b:	-0.00242
Response of analyte, Rx:	12600
Response of Internal Standard , Ristd:	226000
Concentration of IS, Cistd (ug/L):	5.00
Response Ratio:	0.05575
Amount Ratio:	0.04012
Analyte Concentration, Cx (ug/L) :	0.200594

Example Calculation - Soil:

Analyte Concentration, Cx (ug/L):	0.20059
Amount of soil extracted (g):	5.00
Final volume of extract (mL):	50.00
Percent solids (Pct wt.)	100
Concentration in soil (ug/kg):	2.005938

2.3 General Chemistry Data

2.3.1 Percent Solids Data

2.3.1.1 Raw Data

Example Percent Solids Calculations

1.0 Calculating the percent solids of a sample.

$$\%Solids = \frac{WT3 - WT1}{WT2 - WT1} \times F$$

Where:	
WT1 = Weight, in grams, of the empty container	1.30 g
WT2 = Weight, in grams, of the container and wet sample	21.274 g
WT3 = Weight, in grams, of the container and dried sample	5.21 g
F = Factor to get units as percent weight	100
%Solids = Percent solids present in sample.	19.58%

2.0 Calculating the percent moisture of a sample.

% Moisture = 100 - % Solids from 1.0 calculation

Microbac Laboratories Inc.

List of Valid Qualifiers
March 02, 2016

Qualkey: DOD

Qualifier	Description
*	Surrogate or spike compound out of range
+	Correlation coefficient for the MSA is less than 0.995
<	Result is less than the associated numerical value.
>	Greater than
A	See the report narrative
B	The reported result is associated with a contaminated method blank.
B,H1	Analyte present in method blank. Sample analysis performed past holding time.
B1	Target analyte detected in method blank at or above the method reporting limit
B3	Target analyte detected in calibration blank at or above the method reporting limit
B4	The BOD unseeded dilution water blank exceeded 0.2 mg/L
C	Confirmed by GC/MS
CG	Confluent growth
CT1	Cooler temperature at sample reciept exceeded regulatory limit.
DL	Surrogate or spike compound was diluted out
E	Estimated concentration due to sample matrix interference
E,CT1	Estimated results. The cooler temperature at receipt exceeded regulatory guidelines for requested testing.
EDL	Elevated sample reporting limits, presence of non-target analytes
EMPC	Estimated Maximum Possible Concentration
F, S	Estimated result below quantitation limit; method of standard additions(MSA)
F,CT1	Estimated value; the analyte concentration was less than the RL/LOQ. The cooler temperature at receipt exceeded regula
FL	Free Liquid
FP1	Did not ignite.
H1	Sample analysis performed past holding time.
H1,CT1	Sample analysis performed past holding time. The cooler temperature at receipt exceeded regulatory guidelines for reque
I	Semiquantitative result (out of instrument calibration range)
J	Estimated concentration; sample matrix interference.
J	Estimated value ; the analyte concentration was greater than the highest standard
J	Estimated value ; the analyte concentration was less than the LOQ.
J	The reported result is an estimated value.
J,B	Analyte detected in both the method blank and sample above the MDL.
J,CT1	Estimated value ; the analyte concentration was less than the LOQ. Cooler temperature at sample reciept exceeded regu
J,H1	Estimated value ; the analyte concentration was less than the LOQ. Sample analysis performed past holding time.
J,H1	The reported result is an estimated value. Sample was analyzed past holding time.
J,P	Estimate; columns don't agree to within 40%
J,S	Estimated concentration; analyzed by method of standard addition (MSA)
JB	The reported result is an estimated value. The reported result is also associated with a contaminated method blank.
JQ	The reported result is an estimated value and one or more quality control criteria failed. See narrative.
L	Sample reporting limits elevated due to matrix interference
L1	The associated blank spike (LCS) recovery was above the laboratory acceptance limits.
L2	The associated blank spike (LCS) recovery was below the laboratory acceptance limits.
M	Matrix effect; the concentration is an estimate due to matrix effect.
N	Nontarget analyte; the analyte is a tentativlely identified compound (TIC) by GC/MS
NA	Not applicable
ND	Not detected at or above the reporting limit (RL)
ND, B	Not detected at or above the reporting limit (RL). Analyte present in method blank.
ND, CT1	Analyte was not detected. The concentration is below the reported LOD. The cooler temperature at receipt exceeded reg
ND, L	Not detected; sample reporting limit (RL) elevated due to interference
ND, S	Not detected; analyzed by method of standard addition (MSA)
ND,H1	Not detected; Sample analysis performed past holding time.
ND,H1,CT1	Not detected; Sample analysis performed past holding time. The cooler temperature at receipt exceeded regulatory guide
NF	Not found by library search
NFL	No free liquid
NI	Non-ignitable
NR	Analyte is not required to be analyzed
NS	Not spiked
P	Concentrations >40% difference between the two GC columns
Q	One or more quality control criteria failed. See narrative.
Q,H1	One or more quality control criteria failed. Sample analyzed past holding time. See narrative.
QNS	Quantity of sample not sufficient to perform analysis
RA	Reanalysis confirms reported results
RE	Reanalysis confirms sample matrix interference
S	Analyzed by method of standard addition (MSA)
SMI	Sample matrix interference on surrogate
SP	Reported results are for spike compounds only
T5	Laboratory not licensed for this parameter
TIC	Library Search Compound
TNTC	Too numerous to count

Microbac Laboratories Inc.
List of Valid Qualifiers
March 02, 2016

Qualkey: DOD

TNTC, B	Too numerous to count. Analyte present in method blank.
TNTC,CT1	Too numerous to count. The cooler temperature at receipt exceeded regulatory guidelines for requested testing.
TNTC,H1	Too numerous to count. Sample analysis performed past holding time.
U	Analyte was not detected. The concentration is below the reported LOD.
U,CT1	Analyte was not detected. The concentration is below the reported LOD. Cooler temperature at sample reciept exceeded
U,H1	Not detected; Sample analysis performed past holding time.
UJ	Undetected; the MDL and RL are estimated due to quality control discrepancies.
UQ	Undetected; the analyte was analyzed for, but not detected.
W	Post-digestion spike for furnace AA out of control limits
X	Exceeds regulatory limit
X, S	Exceeds regulatory limit; method of standard additions (MSA)
Z	Cannot be resolved from isomer - see below

NELAP Addendum - January 4, 2016

Non-NELAP LIMS Product and Description

The following is a list of those tests that are not included in the Microbac – OVD NELAP Scope of Accreditation:

Heat of Combustion (BTU)
Total Halide by Bomb Combustion (TX)
Particle Sizing - 200 Mesh (PS200)
Specific Gravity/Density (SPGRAV)
Total Residual Chlorine (CL-TRL)
Total Volatile Solids (all forms) (TVS)
Total Coliform Bacteria (all methods)
Fecal Coliform Bacteria (all methods)
Sulfite (SO3)
Propionaldehyde (HPLC-UV)

SOLID AND HAZARDOUS CHEMICALS
Nitrogen, Ammonia by Method 350.1
Chromium, Hexavalent, Leachable by SM3500 Cr-B 2009
Phenolics, Total by Method 420.1
ASTM D3987-06

NELAP Accreditation by Laboratory SOP

NONPOTABLE WATER

OVD HPLC02/HPLC-UV

Nitroglycerin
Acetic acid
Butyric acid
Lactic acid
Propionic acid
Pyruvic acid

OVD MSS01/GC-MS

1,4-Phenylenediamine
1-Methylnaphthalene
1,4-Dioxane
Atrazine
Benzaldehyde
Biphenyl
Caprolactam
Hexamethylphosphoramide (HMPA)
Pentachlorobenzene
Pentachloroethane

NELAP Accreditation by Laboratory SOP

NONPOTABLE WATER

OVD MSV01/GC-MS

1, 1, 2-Trichloro-1,2,2-trifluoroethane
1,3-Butadiene
Cyclohexane
Cyclohexanone
Dimethyl disulfide
Dimethylsulfide
Ethyl-t-butylether (ETBE)
Isoprene
Methylacetate
Methylcyclohexane
T-amylmethylether (TAME)
Tetrahydrofuran (THF)

OVD HPLC07/HPLC-MS-MS

Hexamethylphosphoramide (XMPA-LCMS)

OVD HPLC12/HPLC/UV

Acetate
Formate

OVD RSK01/GC-FID

Acetylene
Propane

OVD K9305/ISE

Fluoroborate

SOLID AND HAZARDOUS CHEMICALS

OVD MSS0I/GC-MS

1-Methylnaphthalene
Benzaldehyde
Biphenyl
Caprolactam
Pentachloroethane

NELAP Accreditation by Laboratory SOP

SOLID AND HAZARDOUS CHEMICALS

OVD MSV0I/GC-MS

1.3-Butadiene
Cyclohexane
Cyclohexanone
Dimethyl disulfide
Dimethylsulfide
Ethyl-t-butylether (ETBE)
Isoprene
Methylacetate
Methylcyclohexane
n-Hexane
T-amylmethylether (TAME)

Microbac

Laboratory Report Number: L16021306

Kayla Teague
AECOM Technical Services, Inc.
16000 Dallas Parkway
Dallas, TX 75248

Please find enclosed the analytical results for the samples you submitted to Microbac Laboratories. Review and compilation of your report was completed by Microbac's Ohio Valley Division (OVD). If you have any questions, comments, or require further assistance regarding this report, please contact your service representative listed below.

Laboratory Contact:
Stephanie Mossburg – Team Chemist/Data Specialist
(740) 373-4071
Stephanie.Mossburg@microbac.com

I certify that all test results meet all of the requirements of the DoD QSM and other applicable contract terms and conditions. Any exceptions are attached to this cover page or addressed in the method narratives presented in the report. All results for soil samples are reported on a 'dry-weight' basis unless specified otherwise. Analytical results for water and wastes are reported on a 'as received' basis unless specified otherwise. A statement of uncertainty for each analysis is available upon request. This laboratory report shall not be reproduced, except in full, without the written approval of Microbac Laboratories, DoD ELAP certification number 2936.01. The reported results are related only to the samples analyzed as received.

This report was certified on March 02 2016

David Vandenberg – Managing Director

Record of Sample Receipt and Inspection

Comments/Discrepancies

This is the record of the shipment conditions and the inspection records for the samples received and reported as a sample delivery group (SDG). All of the samples were inspected and observed to conform to our receipt policies, except as noted below.

The following discrepancies were noted:

Discrepancy	Resolution
18DPT05(20-20.5)250216 on the chain of custody, but the labels says (19.5-20). CLS	Please log per the COC. SLM

Coolers

Cooler #	Temperature Gun	Temperature	COC #	Airbill #	Temp Required?
00112756	I	0.0		J2317165947	X

Inspection Checklist

#	Question	Result
1	Were shipping coolers sealed?	Yes
2	Were custody seals intact?	Yes
3	Were cooler temperatures in range of 0-6?	Yes
4	Was ice present?	Yes
5	Were COC's received/information complete/signed and dated?	Yes
6	Were sample containers intact and match COC?	Yes
7	Were sample labels intact and match COC?	No
8	Were the correct containers and volumes received?	Yes
9	Were samples received within EPA hold times?	Yes
10	Were correct preservatives used? (water only)	NA
11	Were pH ranges acceptable? (voa's excluded)	NA
12	Were VOA samples free of headspace (less than 6mm)?	NA

LRC Date:	2016-02-29 00:00:00		

Description	Yes	No	NA	NR	ER#
Chain-of-custody (C-O-C)					
Did samples meet the laboratory's standard conditions of sample acceptability upon receipt?	X				
Were all departures from standard conditions described in an exception report?	X				
Sample and quality control (QC) identification	X				
Are all field sample ID numbers cross-referenced to the laboratory ID numbers?	X				
Are all laboratory ID numbers cross-referenced to the corresponding QC data?	X				
Test reports					
Were all samples prepared and analyzed within holding times?	X				
Other than those results < MQL, were all other raw values bracketed by calibration standards?	X				
Were calculations checked by a peer or supervisor?	X				
Were all analyte identifications checked by a peer or supervisor?	X				
Were sample detection limits reported for all analytes not detected?	X				
Were all results for soil and sediment samples reported on a dry weight basis?	X				
Were % moisture (or solids) reported for all soil and sediment samples?	X				
Were bulk soils/solids samples for volatile analysis extracted with methanol per SW846 Method 5035?			X		
If required for the project, are TICs reported?			X		
Surrogate recovery data					
Were surrogates added prior to extraction?	X				
Were surrogate percent recoveries in all samples within the laboratory QC limits?	X				
Test reports/summary forms for blank samples	X				
Were appropriate type(s) of blanks analyzed?	X				
Were blanks analyzed at the appropriate frequency?	X				
Were method blanks taken through the entire analytical process, including preparation and, if applicable, cleanup procedures?	X				
Were blank concentrations < MQL?	X				
Laboratory control samples (LCS):					
Were all COCs included in the LCS?	X				

Texas Risk Reduction Program (TRRP) Checklist

Laboratory Name:	Microbac OVD	**Laboratory Log Number:**	L16021306
Project Name:		**Method:**	8260
Prep Batch Number(s):	559002	**Reviewer Name:**	Sarah Vandenberg
LRC Date:	2016-02-29 00:00:00		

Was each LCS taken through the entire analytical procedure, including prep and cleanup steps?	X				
Were LCSs analyzed at the required frequency?	X				
Were LCS (and LCSD, if applicable) %Rs within the laboratory QC limits?		X			1
Does the detectability check sample data document the laboratory's capability to detect the COCs at the MDL used to calculate the SDLs?	X				
Was the LCSD RPD within QC limits?	X				
Matrix spike (MS) and matrix spike duplicate (MSD) data			X		
Were the project/method specified analytes included in the MS and MSD?	X				
Were MS/MSD analyzed at the appropriate frequency?	X				
Were MS (and MSD, if applicable) %Rs within the laboratory QC limits?		X			2
Were MS/MSD RPDs within laboratory QC limits?		X			3
Analytical duplicate data					
Were appropriate analytical duplicates analyzed for each matrix?			X		
Were analytical duplicates analyzed at the appropriate frequency?			X		
Were RPDs or relative standard deviations within the laboratory QC limits?			X		
Method quantitation limits (MQLs):					
Are the MQLs for each method analyte included in the laboratory data package?	X				
Do the MQLs correspond to the concentration of the lowest non-zero calibration standard?	X				
Are unadjusted MQLs and DCSs included in the laboratory data package?	X				
Other problems/anomalies					
Are all known problems/anomalies/special conditions noted in this LRC and ER?	X				
Was applicable and available technology used to lower the SDL to minimize the matrix interference effects on the sample results?	X				
Is the laboratory NELAC-accredited under the Texas Laboratory Accreditation Program for the analytes, matrices and methods associated with this laboratory data package?	X				
Initial calibration (ICAL)					
Were response factors and/or relative response factors for each analyte within QC limits?	X				
Were percent RSDs or correlation coefficient criteria met?	X				

Texas Risk Reduction Program (TRRP) Checklist

Laboratory Name:	Microbac OVD	**Laboratory Log Number:**	L16021306
Project Name:		**Method:**	8260
Prep Batch Number(s):	559002	**Reviewer Name:**	Sarah Vandenberg
LRC Date:	2016-02-29 00:00:00		

Was the number of standards recommended in the method used for all analytes?	X				
Were all points generated between the lowest and highest standard used to calculate the curve?	X				
Are ICAL data available for all instruments used?	X				
Has the initial calibration curve been verified using an appropriate second source standard?	X				
Initial and continuing calibration verification (ICCV and CCV) and continuing calibration blank (CCB):					
Was the CCV analyzed at the method-required frequency?	X				
Were percent differences for each analyte within the method-required QC limits?	X				
Was the ICAL curve verified for each analyte?		X			4
Was the absolute value of the analyte concentration in the inorganic CCB < MDL?			X		
Mass spectral tuning					
Was the appropriate compound for the method used for tuning?	X				
Were ion abundance data within the method-required QC limits?	X				
Internal standards (IS)					
Were IS area counts and retention times within the method-required QC limits?	X				
Raw data (NELAC Section 5.5.10)					
Were the raw data (for example, chromatograms, spectral data) reviewed by an analyst?	X				
Were data associated with manual integrations flagged on the raw data?	X				
Dual column confirmation					
Did dual column confirmation results meet the method-required QC?			X		
Tentatively identified compounds (TICs)					
If TICs were requested, were the mass spectra and TIC data subject to appropriate checks?			X		
Interference Check Sample (ICS) results					
Were percent recoveries within method QC limits?			X		
Serial dilutions, post digestion spikes, and method of standard additions					
Were percent differences, recoveries, and the linearity within the QC limits specified in the method?			X		
Method detection limit (MDL) studies

Was a MDL study performed for each reported analyte?	X				
Is the MDL either adjusted or supported by the analysis of DCSs?	X				
Proficiency test reports					
Was the laboratory's performance acceptable on the applicable proficiency tests or evaluation studies?	X				
Standards documentation					
Are all standards used in the analyses NIST-traceable or obtained from other appropriate sources?	X				
Compound/analyte identification procedures					
Are the procedures for compound/analyte identification documented?	X				
Demonstration of analyst competency (DOC)					
Was DOC conducted consistent with NELAC Chapter 5?	X				
Is documentation of the analyst's competency up-to-date and on file?	X				
Verification/validation documentation for methods (NELAC Chapter 5)					
Are all the methods used to generate the data documented, verified, and validated, where applicable?	X				
Laboratory standard operating procedures (SOPs)					
Are laboratory SOPs current and on file for each method performed	X				

1. Items identified by the letter “R” must be included in the laboratory data package submitted in the TRRP-required report(s). Items identified by the letter “S” should be retained and made available upon request for the appropriate retention period;
2. O = organic analyses; I = inorganic analyses (and general chemistry, when applicable);
3. NA = Not applicable;
4. NR = Not reviewed;
5. ER# = Exception Report identification number (an Exception Report should be completed for an item if “NR” or “No” is checked).

The Exception Report for each “No” or “Not Reviewed (NR)” item in Laboratory Review Checklist and for each analyte, matrix, and method for which the laboratory does not hold NELAC accreditation under the Texas Laboratory Accreditation Program.

Release Statement: I am responsible for the release of this laboratory data package. This laboratory is NELAC accredited under the Texas Laboratory Accreditation Program for all the methods, analytes, and matrices reported in this data package except as noted in the Exception Reports. The data have been reviewed and are technically compliant with the requirements of the methods used, except where noted by the laboratory in the Exception Reports. By my signature

below, I affirm to the best of my knowledge all problems/anomalies observed by the laboratory have been identified in the Laboratory Review Checklist, and no information affecting the quality of the data has been knowingly withheld.

Check, if applicable: [ ] This laboratory meets an exception under 30 TAC §25.6 and was last inspection by [ ] TCEQ or [ ] _____ on **(enter date of last inspection**). Any findings affecting the data in this laboratory data package are noted in the Exception Reports herein. The official signing the cover page of the report in which these data are used is responsible for releasing this data package and is by signature affirming the above release statement is true.

Exceptions Report

1)Dichlorodifluoromethane excceded the UCL in the LCS.
2)Dichlorodifluoromethane and Vinyl chloride exceeded the percent recovery in the MS/MSD.
3)1,1,2,2-Tetrachloroethane, 1,2,4-Trichlorobenzene, 1,2,4-Trimethylbenzene, 1,2-Dibromo-3-chloropropane, 1,2,3-Trichlorobenzene, 1,2-Dichlorobenzene, 1,3-Dichlorobenzene, 1,4-Dichlorobenzene, 2-Chlorotoluene, Bromobenzene, trans-1,3-Dichloropropene exceeds RPD limits in the MS/MSD.
4)Dichlorodifluoromethane exceeded the UCL in the ICV.

Raw data (NELAC Section 5.5.10)			X		
Were the raw data (for example, chromatograms, spectral data) reviewed by an analyst?	X				
Were data associated with manual integrations flagged on the raw data?			X		
Dual column confirmation					
Did dual column confirmation results meet the method-required QC?			X		
Tentatively identified compounds (TICs)			X		
If TICs were requested, were the mass spectra and TIC data subject to appropriate checks?			X		
Interference Check Sample (ICS) results					
Were percent recoveries within method QC limits?			X		
Serial dilutions, post digestion spikes, and method of standard additions			X		
Were percent differences, recoveries, and the linearity within the QC limits specified in the method?			X		
Method detection limit (MDL) studies					

Microbac

Texas Risk Reduction Program (TRRP) Checklist

Laboratory Name:	Microbac OVD	**Laboratory Log Number:**	L16021306
Project Name:		**Method:**	PCT-S
Prep Batch Number(s):	WG558918	**Reviewer Name:**	Deanna Hesson
LRC Date:	2016-02-29 00:00:00		

Was a MDL study performed for each reported analyte?			X		
Is the MDL either adjusted or supported by the analysis of DCSs?			X		
Proficiency test reports					
Was the laboratory's performance acceptable on the applicable proficiency tests or evaluation studies?	X				
Standards documentation					
Are all standards used in the analyses NIST-traceable or obtained from other appropriate sources?			X		
Compound/analyte identification procedures					
Are the procedures for compound/analyte identification documented?	X				
Demonstration of analyst competency (DOC)					
Was DOC conducted consistent with NELAC Chapter 5?	X				
Is documentation of the analyst's competency up-to-date and on file?	X				
Verification/validation documentation for methods (NELAC Chapter 5)	X				
Are all the methods used to generate the data documented, verified, and validated, where applicable?	X				
Laboratory standard operating procedures (SOPs)					
Are laboratory SOPs current and on file for each method performed	X				

1. Items identified by the letter “R” must be included in the laboratory data package submitted in the TRRP-required report(s). Items identified by the letter “S” should be retained and made available upon request for the appropriate retention period;

2. O = organic analyses; I = inorganic analyses (and general chemistry, when applicable);

3. NA = Not applicable;

4. NR = Not reviewed;

5. ER# = Exception Report identification number (an Exception Report should be completed for an item if “NR” or “No” is checked).

The Exception Report for each “No” or “Not Reviewed (NR)” item in Laboratory Review Checklist and for each analyte, matrix, and method for which the laboratory does not hold NELAC accreditation under the Texas Laboratory Accreditation Program.

Release Statement: I am responsible for the release of this laboratory data package. This laboratory is NELAC accredited under the Texas Laboratory Accreditation Program for all the methods, analytes, and matrices reported in this data package except as noted in the Exception Reports. The data have been reviewed and are technically compliant with

Texas Risk Reduction Program (TRRP) Checklist

Laboratory Name:	Microbac OVD	**Laboratory Log Number:**	L16021306
Project Name:		**Method:**	PCT-S

the requirements of the methods used, except where noted by the laboratory in the Exception Reports. By my signature below, I affirm to the best of my knowledge all problems/anomalies observed by the laboratory have been identified in the Laboratory Review Checklist, and no information affecting the quality of the data has been knowingly withheld.

Check, if applicable: [ ] This laboratory meets an exception under 30 TAC §25.6 and was last inspection by [ ] TCEQ or [ ] _____ on **(enter date of last inspection**). Any findings affecting the data in this laboratory data package are noted in the Exception Reports herein. The official signing the cover page of the report in which these data are used is responsible for releasing this data package and is by signature affirming the above release statement is true.

2.1.1.2 QC Summary Data

Example 8260 Calculations

1.0 Calculating the Response Factor (RF) from the initial calibration (ICAL) data:

RF = [(Ax) (Cis)] / [(Ais) (Cx)]

where:	Example
Ax = Area of the characteristic ion for the compound being measured:	3399156
Cis = Concentration of the specific internal standard (ug/mL)	25
Ais = Area of the characteristic ion of the specific internal standard	846471
Cx = Concentration of the compound in the standard being measured (ug/mL)	100
RF = Calculated Response Factor	**1.0039**

2.0 Calculating the concentration (C) of a compound in water using the average RF: *

Cx = [(Ax) (Cis) (Vn)(D)] / [(Ais) (RF) (Vs)]

where:	**Example**
Ax = Area of the characteristic ion for the compound being measured	**3122498**
Cis = Concentration of the specific internal standard (ug/L)	**25**
D = Dilution factor for sample as a multiplier (10x = 10)	**1**
Ais = Area of the characteristic ion of the specific internal standard	**611048**
RF = Average RF from the ICAL	**1.004**
Vs = Purge volume of sample (mL)	**10**
Vn = Nominal purge volume of sample (mL) (10.0 mL)	**10**
Cx = Concentration of the compound in the sample being measured (ug/L)	**127.2428**

3.0 Calculating the concentration (C) of a compound in soil using the average RF: *

Cx = [(Ax) (Cis) (Wn)(D)] / [(Ais) (RF) (Ws)]

where:	**Example**
Ax = Area of the characteristic ion for the compound being measured	**3122498**
Cis = Concentration of the specific internal standard (ug/L)	**25**
D = Dilution factor for sample as a multiplier (10x = 10)	**1**
Ais = Area of the characteristic ion of the specific internal standard	**611048**
RF = Average RF from the ICAL	**1.004**
Ws = Weight of sample purged (g)	**5**
Wn = Nominal purge weight (g) (5.0 g)	**5**
Cx = Concentration of the compound in the sample being measured (ug/L)	**127.2428**

Dry weight correction:

Percent solids (PCT_S)	**50**
Cd = (Cx) (100)/PCT_S	**254.4856**

* Concentrations appearing on the instrument quantitation reports are on-column results and do not take into account initial volume, final volume, and the dilution factor.

4.0 Concentration from Linear Regression

Step 1: Retrieve Curve Data From Plot, y = mx + b

y = response ratio = response of analyte / response of IS = Ax/Ais

x = amount ratio = concentration analyte/concentration internal standard = Cx / Cis

m = slope from curve = 0.213

b = intercept from curve = - 0.00642

Step 2: Calculate y from Quantitation Report

y = 86550/593147 = 0.1459

Step 3: Solve for x

x = (y - b)/m = [(0.1459 -(- 0.00642)]/ 0.213 = 0.7152

Step 4: Solve for analyte concentration Cx

Cx = Cis (x) = (25.0)(0.7152) = 17.88

Example Spreadsheet Calculation:

Slope from curve, m:	**0.213**
Intercept from curve, b:	**-0.00642**
Area of analyte, Ax:	**86550**
Area of Internal Standard , Ais:	**593147**
Concentration of IS, Cis	**25.00**
Response Ratio:	**0.145917**
Amount Ratio:	**0.715195**
Concentration:	**17.87988**
Units of Internal Standard:	**ug/L**

5.0 Concentration from Quadratic Regression

Step 1 - Retrieve Curve Data from Plot, y = Ax^2 + Bx + C
Where:
Ax^2 + Bx + (C - y) = 0
A, B, C = constants from the ICAL quadratic regression
y = Response ratio = Area of analyte/Area of internal standard (IS)
x = Amount ratio = Concentration of analyte/concentration of IS

Step 2: Calculate y from Quantitation Report

y = Ax/Ais

Step 3: Solve for x using the quadratic formula
Ax^2 + Bx + C - y = 0

$$x = \frac{b \pm \sqrt{\left(b^2 - 4a(c - y)\right)}}{2a}$$ (Two possible solutions)

Step 4: Solve for analyte concentration Cx

Cx = (Cis)(Amount ratio)

Example Spreadsheet Calculation:

Value of A from plot:	**-0.00629**	
Value of B from plot:	**0.511**	
Value of C from plot:	**-0.0276**	
Area of unknown from quantitation report:	**293821**	
Area of IS from quantiation report:	**784848**	
Response ratio, y:	**0.374367**	
C - y:	**-0.40197**	
Root 1 - Computed amount ratio , X1:	**80.44567**	
Root 2 - Computed amount ratio , X2:	**0.794396**	use this solution
Concentration of IS, Cis:	**25.00**	
Concentration of analyte, Cx:	**19.86**	ug/L

Response via : Initial Calibration
DataAcq Meth : 8260SL

Internal Standards	R.T.	QIon	Response	Conc Units	Dev(Min)
1) Fluorobenzene	10.85	96	544259	50.00 ug/kg	0.00
57) Chlorobenzene-d5	14.72	117	391881	50.00 ug/kg	-0.01
77) 1,4-Dichlorobenzene-d4	17.76	152	178969	50.00 ug/kg	0.00

System Monitoring Compounds

37) Dibromofluoromethane	9.81	111	29036	9.8422 ug/kg	0.00
Spiked Amount 50.000	Range 80 - 120		Recovery = 19.68%#		
43) 1,2-Dichloroethane-d4	10.44	65	38093	10.2911 ug/kg	0.00
Spiked Amount 50.000	Range 80 - 120		Recovery = 20.58%#		
58) Toluene-d8	12.83	98	95044	9.5885 ug/kg	0.00
Spiked Amount 50.000	Range 81 - 117		Recovery = 19.18%#		
79) p-Bromofluorobenzene	16.23	95	32806	9.4138 ug/kg	0.00
Spiked Amount 50.000	Range 74 - 121		Recovery = 18.82%#		

Target Compounds					Qvalue
2) Dichlorodifluoromethane	3.28	85	14756	3.9724 ug/kg	92
3) Chloromethane	3.74	50	15227	4.2763 ug/kg	91
4) Vinyl Chloride	3.99	62	17097	4.7964 ug/kg	89
5) 1,3-Butadiene	4.04	54	14484	4.2710 ug/kg	97
6) Bromomethane	4.89	94	9847	4.2533 ug/kg	95
7) Chloroethane	5.04	64	6311	3.9741 ug/kg	93
8) Trichlorofluoromethane	5.53	101	22668	4.2400 ug/kg	100
9) Diethyl ether	6.05	59	118004	47.2164 ug/kg	99
10) Isoprene	6.10	67	13644	4.2747 ug/kg	95
11) Acrolein	6.30	56	12131	24.3428 ug/kg	84
12) 1,1,2-Trichloro-1,2,2-Trif	6.31	101	12752	4.6251 ug/kg	95
13) Acetone	6.41	43	9765	4.9429 ug/kg	94
14) 1,1-Dichloroethene	6.62	61	21760	4.2784 ug/kg	99
15) Tert-Butyl Alcohol	6.76	59	50500	90.7440 ug/kg	98
16) Dimethyl Sulfide	6.88	62	10098	4.6977 ug/kg	87
17) Iodomethane	7.13	142	4147	5.3886 ug/kg	97
18) Methyl acetate	7.15	43	12159	4.3976 ug/kg#	87
19) Methylene Chloride	7.41	84	11825	4.2690 ug/kg	99
20) Carbon Disulfide	7.45	76	34078	4.3495 ug/kg	94
21) Acrylonitrile	7.58	53	31012	22.6731 ug/kg	100
22) Methyl Tert Butyl Ether	7.61	73	34936	4.4284 ug/kg	99
23) trans-1,2-Dichloroethene	7.85	61	20503	4.5233 ug/kg	95
24) n-Hexane	7.92	57	20970	4.4853 ug/kg	98
25) Diisopropyl ether	8.26	45	505084	46.5162 ug/kg	100
26) Vinyl Acetate	8.44	43	28253	4.5644 ug/kg	100
27) 1,1-Dichloroethane	8.47	63	24239	4.2575 ug/kg	99
28) Ethyl-Tert-Butyl ether	8.83	59	463447	45.9037 ug/kg	99
29) 2-Butanone	9.03	43	8265	4.7092 ug/kg	88
30) Propionitrile	9.15	54	25938	48.2931 ug/kg	99
31) 2,2-Dichloropropane	9.23	77	17954	4.2251 ug/kg	91
32) cis-1,2-Dichloroethene	9.32	96	13479	4.5340 ug/kg	84
33) Chloroform	9.52	83	23525	4.4982 ug/kg	95
34) 1-Bromopropane	9.65	122	2239	5.8652 ug/kg	90
35) Bromochloromethane	9.75	130	9205	4.7667 ug/kg	97
36) Tetrahydrofuran	9.78	42	53635	47.4100 ug/kg	99
38) 1,1,1-Trichloroethane	10.04	97	20945	4.4285 ug/kg	91
39) Cyclohexane	10.09	56	23110	4.4818 ug/kg	98
40) 1,1-Dichloropropene	10.24	75	16349	4.3930 ug/kg	99
41) Tert-Amyl-Methyl ether	10.35	73	343692	46.8330 ug/kg	98
42) Carbon Tetrachloride	10.39	117	18527	4.2254 ug/kg	100
