Were method blanks taken through the entire analytical process, including preparation and, if applicable, cleanup procedures?	X				
Were blank concentrations < MQL?	X				
Laboratory control samples (LCS):	X				
Were all COCs included in the LCS?	X				

Texas Risk Reduction Program (TRRP) Checklist

Laboratory Name:	Microbac OVD	**Laboratory Log Number:**	L15031486
Project Name:		**Method:**	TOC
Prep Batch Number(s):	WG517282	**Reviewer Name:**	Deanna Hesson
LRC Date:	2015-04-03 00:00:00		

Was each LCS taken through the entire analytical procedure, including prep and cleanup steps?	X				
Were LCSs analyzed at the required frequency?	X				
Were LCS (and LCSD, if applicable) %Rs within the laboratory QC limits?	X				
Does the detectability check sample data document the laboratory's capability to detect the COCs at the MDL used to calculate the SDLs?	X				
Was the LCSD RPD within QC limits?	X				
Matrix spike (MS) and matrix spike duplicate (MSD) data					
Were the project/method specified analytes included in the MS and MSD?	X				
Were MS/MSD analyzed at the appropriate frequency?	X				
Were MS (and MSD, if applicable) %Rs within the laboratory QC limits?	X				
Were MS/MSD RPDs within laboratory QC limits?	X				
Analytical duplicate data					
Were appropriate analytical duplicates analyzed for each matrix?	X				
Were analytical duplicates analyzed at the appropriate frequency?	X				
Were RPDs or relative standard deviations within the laboratory QC limits?	X				
Method quantitation limits (MQLs):					
Are the MQLs for each method analyte included in the laboratory data package?	X				
Do the MQLs correspond to the concentration of the lowest non-zero calibration standard?	X				
Are unadjusted MQLs and DCSs included in the laboratory data package?	X				
Other problems/anomalies					
Are all known problems/anomalies/special conditions noted in this LRC and ER?	X				
Was applicable and available technology used to lower the SDL to minimize the matrix interference effects on the sample results?			X		
Is the laboratory NELAC-accredited under the Texas Laboratory Accreditation Program for the analytes, matrices and methods associated with this laboratory data package?	X				
Initial calibration (ICAL)					
Were response factors and/or relative response factors for each analyte within QC limits?	X				
Were percent RSDs or correlation coefficient criteria met?	X				

Microbac

Texas Risk Reduction Program (TRRP) Checklist

Laboratory Name:	Microbac OVD	**Laboratory Log Number:**	L15031486
Project Name:		**Method:**	TOC
Prep Batch Number(s):	WG517282	**Reviewer Name:**	Deanna Hesson
LRC Date:	2015-04-03 00:00:00		

Was the number of standards recommended in the method used for all analytes?	X				
Were all points generated between the lowest and highest standard used to calculate the curve?	X				
Are ICAL data available for all instruments used?	X				
Has the initial calibration curve been verified using an appropriate second source standard?	X				
Initial and continuing calibration verification (ICCV and CCV) and continuing calibration blank (CCB):					
Was the CCV analyzed at the method-required frequency?	X				
Were percent differences for each analyte within the method-required QC limits?	X				
Was the ICAL curve verified for each analyte?	X				
Was the absolute value of the analyte concentration in the inorganic CCB < MDL?	X				
Mass spectral tuning					
Was the appropriate compound for the method used for tuning?			X		
Were ion abundance data within the method-required QC limits?			X		
Internal standards (IS)					
Were IS area counts and retention times within the method-required QC limits?			X		
Raw data (NELAC Section 5.5.10)			X		
Were the raw data (for example, chromatograms, spectral data) reviewed by an analyst?	X				
Were data associated with manual integrations flagged on the raw data?			X		
Dual column confirmation					
Did dual column confirmation results meet the method-required QC?			X		
Tentatively identified compounds (TICs)			X		
If TICs were requested, were the mass spectra and TIC data subject to appropriate checks?			X		
Interference Check Sample (ICS) results					
Were percent recoveries within method QC limits?			X		
Serial dilutions, post digestion spikes, and method of standard additions			X		
Were percent differences, recoveries, and the linearity within the QC limits specified in the method?			X		
Method detection limit (MDL) studies					

Texas Risk Reduction Program (TRRP) Checklist

Laboratory Name:	Microbac OVD	**Laboratory Log Number:**	L15031486
Project Name:		**Method:**	TOC
Prep Batch Number(s):	WG517282	**Reviewer Name:**	Deanna Hesson
LRC Date:	2015-04-03 00:00:00		

Was a MDL study performed for each reported analyte?	X				
Is the MDL either adjusted or supported by the analysis of DCSs?	X				
Proficiency test reports					
Was the laboratory's performance acceptable on the applicable proficiency tests or evaluation studies?	X				
Standards documentation					
Are all standards used in the analyses NIST-traceable or obtained from other appropriate sources?	X				
Compound/analyte identification procedures					
Are the procedures for compound/analyte identification documented?	X				
Demonstration of analyst competency (DOC)					
Was DOC conducted consistent with NELAC Chapter 5?	X				
Is documentation of the analyst's competency up-to-date and on file?	X				
Verification/validation documentation for methods (NELAC Chapter 5)	X				
Are all the methods used to generate the data documented, verified, and validated, where applicable?	X				
Laboratory standard operating procedures (SOPs)					
Are laboratory SOPs current and on file for each method performed	X				

1. Items identified by the letter “R” must be included in the laboratory data package submitted in the TRRP-required report(s). Items identified by the letter “S” should be retained and made available upon request for the appropriate retention period;
2. O = organic analyses; I = inorganic analyses (and general chemistry, when applicable);
3. NA = Not applicable;
4. NR = Not reviewed;
5. ER# = Exception Report identification number (an Exception Report should be completed for an item if “NR” or “No” is checked).

The Exception Report for each “No” or “Not Reviewed (NR)” item in Laboratory Review Checklist and for each analyte, matrix, and method for which the laboratory does not hold NELAC accreditation under the Texas Laboratory Accreditation Program.

Release Statement: I am responsible for the release of this laboratory data package. This laboratory is NELAC accredited under the Texas Laboratory Accreditation Program for all the methods, analytes, and matrices reported in this data package except as noted in the Exception Reports. The data have been reviewed and are technically compliant with

Texas Risk Reduction Program (TRRP) Checklist

Laboratory Name:	Microbac OVD	**Laboratory Log Number:**	L15031486

2.1.1.2 QC Summary Data

RSK-175 - Example Calculation for Methane

1.0 Linear Calibration Models

Option A - Average RF Method

ICAL_x	ICAL_r		RF
1.67	19901		11917
6.67	69174		10371
16.7	176923		10594
66.7	685135		10272
133	1324853		9961
300	2845104		9484
		Average RF:	**10433**

Where:
ICAL_x = the ICAL concentration
ICAL_r = the ICAL response (area)
RF = calibration factor = ICAL_r / ICAL_x

Option B - Agilent Linear Regression Constant

ICAL_x	ICAL_r	[ICAL_r}^2	[ICAL-x][ICAL-r]
1.67	19901	396049801	33235
6.67	69174	4785042276	461391
16.7	176923	31301747929	2954614
66.7	685135	4.6941E+11	45698505
133	1324853	1.75524E+12	176205449
300	2845104	8.09462E+12	853531200
Summation:		**1.03557E+13**	**1078884393**

Agilent Linear Regression Constant : **9598.567853**
(1.03557E+13)/1078884393)

2.0 Calculate the concentration in extract, Cx

Where:

y = area response of methane from quant report	**1157414**
a = average RF (or Agilent regression constant)	**10433.00**
Cx = y/a	**110.9377935**

3.0 Calculate the concentration in sample

Cs = Cx (MW/Tf) (HS/S) (DF)

Where:

Cx = Concentration in extract	**110.9377935**	umol/mol
MW = molecular weight of analyte	**16.04**	ug/umol
TF = temperature factor = (22.4)(313/273)	**25.68**	L/mol
HS = headspace volume	**0.015**	L
S = sample volume remaining after headspace removal	**0.00547**	L
DF = dilution factor	**2**	
Cs = calculated sample concentration	**380.034301**	ug/L

RSK-175 - Example Calculation for Carbon Dioxide

ICAL Plot - Quadratic Regression (y = Ax^2 + Bx +C)

Ax^2 + Bx + (C - y) = 0

Step 1 - Calculate the concentration in extract, Cx

Data from quadratic regression plot:		
Value of A from plot:	**0.916**	
Value of B from plot:	**1540**	
Value of C from plot:	**0**	
Response for methane from quantitation report (y):	**8763828**	
Value of C - y	**-8763828**	
Solving for Cx using the quadratic formula:		
Root 1 - Computed Cx1:	**2364.716284**	umol/mol
Root 2 - Computed Cx2:	**-4045.938991**	

Step 2 - Calculate the concentration in sample

Cs = Cx (MW/Tf) (HS/S) (DF)

Where:

Cx = Concentration in extract :	**2364.716284**	umol/mol
MW = molecular weight of analyte:	**44.0**	ug/umol
TF = temperature factor = (22.4)(313/273):	**25.68**	L/mol
HS = initial headspace volume (extraction log):	**0.015**	L
S = final volume (extraction log):	**0.00547**	L
DF = dilution factor:	**10**	
Cs = calculated sample concentration:	**111106.798**	ug/L

Other Notes:

Temperature of headspace = 40 C = 313 K

Analyte	**MW (g/mol)**
Methane	16.04
Ethane	30.07
Ethene	28.05
Propane	44.1
Carbon Dioxide	44.0

2.2.1.2 QC Summary Data

Example Calculations - Ion Chromatography

A. Methods 9056/300.0 (Quadratic with Offset)

1. Retrieve Curve Data from the ICAL Curve

c2 = the value of curve constant
c1= the curve slope
c0 = the curve offset

2. Obtain the area, y , from the instrument raw data

3. Calculate the concentration of the analyte, f(y), where:

$$f(y) = \frac{1}{2 * c_2} * \left(- c_1 \pm \sqrt{c_1^2 - 4 * c_2 * (c_0 - y)}\right)$$

Example Calculation:

Value of constant, c2, (curve):	0.0003
Value of curve constant, c1, (slope):	0.0869
Value of curve constant, c0, (offset):	-0.0103
Area of target analyte, y, (uS*min):	2.993
Calculated concentration, f(y), (mg/L):	31.1998864
or:	-40.1161215 *
Dilution factor (D):	1.00
Concentration of analyte in sample (mg/L):	31.200

* There are two possible solutions, but only one is valid.

B. Method 314.0 - Perchlorate (Linear)

Retrieve Curve Data from Linear Plot

c1 = the curve slope

Obtain the area, y , from the quantitation report

Calculate the concentration of the analyte, f(y), where:

f (y) = y / c1

Example Calculation:

Value of c1, slope:	0.0034
Area of target analyte, y:	0.083
Calculated concentration:	24.4117647
Dilution Factor:	1
Concentration in sample:	24.4117647

2.2.2.2 QC Summary Data

Example Calculations for Visible Spectrophotometric Methods

Linear Calibration Model

Step 1 - Retrieve Curve Data from ICAL

m = slope of the linear equation
b = intercept from the linear equation
y = instrument response as absorbance or OD
x = concentration of analyte (mg/L)
y = mx + b

Step 2: Calculate the instrument concentration, x

Where:

x = (y - b)/m

Step 3: Solve for analyte concentration in sample, Cx

Cx = (x) (D)

Example Calculation (LCS):

Value of m from plot:	7.809
Value of b from plot:	0.0004135
Absorbance of unknown from quantitation report (y):	0.31
Calculated concentration (x):	0.03964483
Dilution factor (D):	1.00
Concentration of analyte in sample, Cy:	0.0396 mg/L

SmartChem Autoanalyzer - Quadratic Calibration for Chloride and Sulfate

Step 1 - Retrieve Curve Data from Smartchem ICAL

A, B, C = constants from the ICAL quadratic regression

x = instrument response as absorbance or OD

y = concentration of analyte (mg/L)

Step 2: Calculate the instrument concentration, y

Where:

y = Ax^2 + Bx + C

Step 3: Solve for analyte concentration in sample, Cy

Cy = (y) (D)

Example Calculation (LCS):

Value of A from plot:	101.2796
Value of B from plot:	318.9056
Value of C from plot:	-2.2712
Absorbance of unknown from quantitation report (x):	0.1583
Calculated concentration (y):	50.7495108
Dilution factor (D):	1.00
Concentration of analyte in sample, Cy:	50.75 mg/L

2.2.3.2 QC Summary Data

Example Total Sulfide(Liquid) Calculations

[mL Iodine * N Iodide) - (mL titrant * N titrant)] * 16000/(volume * dilution) = mg/L Sulfide

where:

mL Iodine = mL of Iodine used
N Iodine = normality of Iodine
mL titrant = mL of titrant used
N titrant = normality of titrant
16000 = factor: 1mL of 0.025 N iodine reacts with 0.4mg sulfide
volume = mL filtered of mL titrated(if not filtered)
dilution = dilution in decimal form (1/5 = 0.2)

Example Total Sulfide(Soil) Calculations

[(mL Iodine * N Iodine) - (mL titrant * N titrant)] * 16.03/weight = mg/kg sulfide

where:

mL Iodine = mL of Iodine used
N Iodine = normality of Iodine
mL titrant = normality of titrant
16.03 = 32.06 grams per 2 equivalents
weight = kg of sample used

Microbac Laboratories Inc.
List of Valid Qualifiers
April 03, 2015

Qualkey: DOD

Qualifier	Description
*	Surrogate or spike compound out of range
+	Correlation coefficient for the MSA is less than 0.995
<	Result is less than the associated numerical value.
>	Greater than
A	See the report narrative
B	The reported result is associated with a contaminated method blank.
B,H1	Analyte present in method blank. Sample analysis performed past holding time.
B1	Target analyte detected in method blank at or above the method reporting limit
B3	Target analyte detected in calibration blank at or above the method reporting limit
B4	The BOD unseeded dilution water blank exceeded 0.2 mg/L
C	Confirmed by GC/MS
CG	Confluent growth
CT1	The cooler temperature at receipt exceeded regulatory guidelines for requested testing.
DL	Surrogate or spike compound was diluted out
E	Estimated concentration due to sample matrix interference
EDL	Elevated sample reporting limits, presence of non-target analytes
EMPC	Estimated Maximum Possible Concentration
F, S	Estimated result below quantitation limit; method of standard additions(MSA)
F,CT1	Estimated value; the analyte concentration was less than the RL/LOQ. The cooler temperature at receipt exceeded regula
FL	Free Liquid
H1	Sample analysis performed past holding time.
H1,CT1	Sample analysis performed past holding time. The cooler temperature at receipt exceeded regulatory guidelines for reque
I	Semiquantitative result (out of instrument calibration range)
J	Estimated concentration; sample matrix interference.
J	Estimated value ; the analyte concentration was greater than the highest standard
J	Estimated value ; the analyte concentration was less than the LOQ.
J	The reported result is an estimated value.
J,B	Analyte detected in both the method blank and sample above the MDL.
J,CT1	Estimated value; the analyte concentration was less than the RL/LOQ.
J,CT1	Estimated value; the analyte concentration was less than the RL/LOQ. The cooler temperature at receipt exceeded regula
J,H1	Estimated value ; the analyte concentration was less than the LOQ. Sample analysis performed past holding time.
J,H1	The reported result is an estimated value. Sample was analyzed past holding time.
J,P	Estimate; columns don't agree to within 40%
J,S	Estimated concentration; analyzed by method of standard addition (MSA)
JB	The reported result is an estimated value. The reported result is also associated with a contaminated method blank.
JQ	The reported result is an estimated value and one or more quality control criteria failed. See narrative.
L	Sample reporting limits elevated due to matrix interference
L1	The associated blank spike (LCS) recovery was above the laboratory acceptance limits.
L2	The associated blank spike (LCS) recovery was below the laboratory acceptance limits.
M	Matrix effect; the concentration is an estimate due to matrix effect.
N	Nontarget analyte; the analyte is a tentativlely identified compound (TIC) by GC/MS
NA	Not applicable
ND	Not detected at or above the reporting limit (RL/MDL).
ND, B	Not detected at or above the reporting limit (RL). Analyte present in method blank.
ND, CT1	Analyte was not detected. The concentration is below the reported LOD. The cooler temperature at receipt exceeded reg
ND, L	Not detected; sample reporting limit (RL) elevated due to interference
ND, S	Not detected; analyzed by method of standard addition (MSA)
ND,H1	Not detected; Sample analysis performed past holding time.
ND,H1,CT1	Not detected; Sample analysis performed past holding time. The cooler temperature at receipt exceeded regulatory guide
NF	Not found by library search
NFL	No free liquid
NI	Non-ignitable
NR	Analyte is not required to be analyzed
NS	Not spiked
P	Concentrations >40% difference between the two GC columns
Q	One or more quality control criteria failed. See narrative.
Q,H1	One or more quality control criteria failed. Sample analyzed past holding time. See narrative.
QNS	Quantity of sample not sufficient to perform analysis
RA	Reanalysis confirms reported results
RE	Reanalysis confirms sample matrix interference
S	Analyzed by method of standard addition (MSA)
SMI	Sample matrix interference on surrogate
SP	Reported results are for spike compounds only
TIC	Library Search Compound
TNTC	Too numerous to count
TNTC, B	Too numerous to count. Analyte present in method blank.
TNTC,CT1	Too numerous to count. The cooler temperature at receipt exceeded regulatory guidelines for requested testing.

Microbac Laboratories Inc.
List of Valid Qualifiers
April 03, 2015

Qualkey: DOD

TNTC,H1	Too numerous to count. Sample analysis performed past holding time.
U	Analyte was not detected. The concentration is below the reported LOD.
U,H1	Not detected; Sample analysis performed past holding time.
UJ	Undetected; the MDL and RL are estimated due to quality control discrepancies.
UQ	Undetected; the analyte was analyzed for, but not detected.
W	Post-digestion spike for furnace AA out of control limits
X	Exceeds regulatory limit
X, S	Exceeds regulatory limit; method of standard additions (MSA)
Z	Cannot be resolved from isomer - see below

NELAP Addendum - March 27, 2015

Non-NELAP LIMS Product and Description

The following is a list of those tests that are not included in the Microbac – OVL NELAP Scope of Accreditation:

Heat of Combustion (BTU)
Total Halide by Bomb Combustion (TX)
Particle Sizing - 200 Mesh (PS200)
Specific Gravity/Density (SPGRAV)
Total Residual Chlorine (CL-TRL)
Total Volatile Solids (all forms) (TVS)
Total Coliform Bacteria (all methods)
Fecal Coliform Bacteria (all methods)
Sulfite (SO3)
Formate (HPLC-UV)
Propionaldehyde (HPLC-UV)
Fluoroborate (ISE)

SOLID AND HAZARDOUS CHEMICALS
Nitrogen, Ammonia by Method 350.1
Chromium, Hexavalent, Leachable by SM3500 Cr-B 2009
Phenolics, Total by Method 420.1
m,p-xylenes
o-xylene

NELAP Accreditation by Laboratory SOP

NONPOTABLE WATER

OVL HPLC02/HPLC-UV

Nitroglycerin
Acetic acid
Butyric acid
Lactic acid
Propionic acid
Pyruvic acid

OVL MSS01/GC-MS

1,4-Phenylenediamine
1-Methylnaphthalene
1,4-Dioxane
Atrazine
Benzaldehyde
Biphenyl
Caprolactam
Hexamethylphosphoramide (HMPA)
Pentachlorobenzene

Pentachloroethane

NELAP Accreditation by Laboratory SOP

NONPOTABLE WATER

OVL MSV0I/GC-MS

1, 1, 2-Trichloro-1,2,2-trifluoroethane
1,3-Butadiene
Cyclohexane
Cyclohexanone
Dimethyl disulfide
Dimethylsulfide
Ethyl-t-butylether (ETBE)
Isoprene
Methylacetate
Methylcyclohexane
T-amylmethylether (TAME)
Tetrahydrofuran (THF)

OVL RSKOI/GC-FID

Isobutane
n-Butane
Propane
Propylene
Propyne

OVL HPLC07/HPLC-MS-MS

Hexamethylphosphoramide (XMPA-LCMS)

OVL HPLC12/HPLC/UV
Acetate

SOLID AND HAZARDOUS CHEMICALS

OVL MSS0I/GC-MS

1-Methylnaphthalene
Benzaldehyde
Biphenyl
Caprolactam
Pentachloroethane

NELAP Accreditation by Laboratory SOP

SOLID AND HAZARDOUS CHEMICALS

OVL MSV0I/GC-MS

1.3-Butadiene
Cyclohexane
Cyclohexanone
Dimethyl disulfide
Dimethylsulfide
Ethyl-t-butylether (ETBE)
Isoprene
Methylacetate
Methylcyclohexane
n-Hexane
T-amylmethylether (TAME)

Microbac

Laboratory Report Number: L15050872

Kayla Teague
AECOM Technical Services, Inc.
16000 Dallas Parkway
Dallas, TX 75248

Please find enclosed the analytical results for the samples you submitted to Microbac Laboratories. Review and compilation of your report was completed by Microbac's Ohio Valley Division (OVD). If you have any questions, comments, or require further assistance regarding this report, please contact your service representative listed below.

Laboratory Contact:
Stephanie Mossburg – Team Chemist/Data Specialist
(740) 373-4071
Stephanie.Mossburg@microbac.com

I certify that all test results meet all of the requirements of the DoD QSM and other applicable contract terms and conditions. Any exceptions are attached to this cover page or addressed in the method narratives presented in the report. All results for soil samples are reported on a 'dry-weight' basis unless specified otherwise. Analytical results for water and wastes are reported on a 'as received' basis unless specified otherwise. A statement of uncertainty for each analysis is available upon request. This laboratory report shall not be reproduced, except in full, without the written approval of Microbac Laboratories, DoD ELAP certification number 2936.01. The reported results are related only to the samples analyzed as received.

This report was certified on May 28 2015

David Vandenberg – Managing Director

Record of Sample Receipt and Inspection

Comments/Discrepancies

This is the record of the shipment conditions and the inspection records for the samples received and reported as a sample delivery group (SDG). All of the samples were inspected and observed to conform to our receipt policies, except as noted below.

The following discrepancies were noted:

Discrepancy	Resolution
67WW03-051215: no date/time sampled or ID listed on the labels. This is the only ID that we are missing, so by process of elimination, we are able to determine that the VOAs are this sample ID. CLS	Please proceed.

Coolers

Cooler #	Temperature Gun	Temperature	COC #	Airbill #	Temp Required?
0019783	H	2.0		J2317161576	X

Inspection Checklist

#	Question	Result
1	Were shipping coolers sealed?	Yes
2	Were custody seals intact?	Yes
3	Were cooler temperatures in range of 0-6?	Yes
4	Was ice present?	Yes
5	Were COC's received/information complete/signed and dated?	Yes
6	Were sample containers intact and match COC?	Yes
7	Were sample labels intact and match COC?	No
8	Were the correct containers and volumes received?	Yes
9	Were samples received within EPA hold times?	Yes
10	Were correct preservatives used? (water only)	Yes
11	Were pH ranges acceptable? (voa's excluded)	NA
12	Were VOA samples free of headspace (less than 6mm)?	Yes

Laboratory Data Package Cover Page

X	R1	Field chain-of-custody documentation;
X	R2	Sample identification cross-reference;
X	R3	Test reports (analytical data sheets) for each environmental sample that includes: (a) Items consistent with NELAC Chapter 5, (b) dilution factors, (c) preparation methods, (d) cleanup methods, and (e) a.if required for the project, tentatively identified compounds (TICs).
X	R4	Surrogate recovery data including: (a) Calculated recovery (%R), and (b) the laboratory's surrogate QC limits.
X	R5	Test reports/summary forms for blank samples;
X	R6	Test reports/summary forms for laboratory control samples (LCSs) including: (a) LCS spiking amounts, (b) calculated %R for each analyte, and (c) the laboratory's LCS QC limits.
X	R7	Test reports for project matrix spike/matrix spike duplicates (MS/MSDs) including: (a) samples associated with the MS/MSD clearly identified, (b) MS/MSD spiking compounds, (c) concentration of each MS/MSD analyte measured in the parent and spiked samples, (d) calculated %Rs and relative percent differences (RPDs), and (e) the laboratory's MS/MSD QC limits.
X	R8	Laboratory analytical duplicate (if applicable) recovery and precision: (a) the amount of analyte measured in the duplicate, (b) the calculated RPD, and (c) the laboratory's QC limits for analytical duplicates.
X	R9	List of method quantitation limits (MQLs) and detectability check sample results for each analyte for each method and matrix.
X	R10	Other problems or anomalies.

Texas Risk Reduction Program (TRRP) Checklist

Laboratory Name:	Microbac OVD	**Laboratory Log Number:**	L15050872
Project Name:		**Method:**	8260
Prep Batch Number(s):	523885,524783	**Reviewer Name:**	Franci Bolden
LRC Date:	2015-05-27 00:00:00		

Description	Yes	No	NA	NR	ER#
Chain-of-custody (C-O-C)					
Did samples meet the laboratory's standard conditions of sample acceptability upon receipt?	X				
Were all departures from standard conditions described in an exception report?	X				
Sample and quality control (QC) identification	X				
Are all field sample ID numbers cross-referenced to the laboratory ID numbers?	X				
Are all laboratory ID numbers cross-referenced to the corresponding QC data?	X				
Test reports					
Were all samples prepared and analyzed within holding times?	X				
Other than those results < MQL, were all other raw values bracketed by calibration standards?	X				
Were calculations checked by a peer or supervisor?	X				
Were all analyte identifications checked by a peer or supervisor?	X				
Were sample detection limits reported for all analytes not detected?	X				
Were all results for soil and sediment samples reported on a dry weight basis?	X				
Were % moisture (or solids) reported for all soil and sediment samples?	X				
Were bulk soils/solids samples for volatile analysis extracted with methanol per SW846 Method 5035?			X		
If required for the project, are TICs reported?			X		
Surrogate recovery data					
Were surrogates added prior to extraction?	X				
Were surrogate percent recoveries in all samples within the laboratory QC limits?	X				
Test reports/summary forms for blank samples	X				
Were appropriate type(s) of blanks analyzed?	X				
Were blanks analyzed at the appropriate frequency?	X				
Were method blanks taken through the entire analytical process, including preparation and, if applicable, cleanup procedures?	X				
Were blank concentrations < MQL?	X				
Laboratory control samples (LCS):					
Were all COCs included in the LCS?	X				

Texas Risk Reduction Program (TRRP) Checklist

Laboratory Name:	Microbac OVD	**Laboratory Log Number:**	L15050872
Project Name:		**Method:**	8260
Prep Batch Number(s):	523885,524783	**Reviewer Name:**	Franci Bolden
LRC Date:	2015-05-27 00:00:00		

Was each LCS taken through the entire analytical procedure, including prep and cleanup steps?	X				
Were LCSs analyzed at the required frequency?	X				
Were LCS (and LCSD, if applicable) %Rs within the laboratory QC limits?	X				
Does the detectability check sample data document the laboratory's capability to detect the COCs at the MDL used to calculate the SDLs?	X				
Was the LCSD RPD within QC limits?	X				
Matrix spike (MS) and matrix spike duplicate (MSD) data					
Were the project/method specified analytes included in the MS and MSD?	X				
Were MS/MSD analyzed at the appropriate frequency?	X				
Were MS (and MSD, if applicable) %Rs within the laboratory QC limits?	X				
Were MS/MSD RPDs within laboratory QC limits?		X			1
Analytical duplicate data					
Were appropriate analytical duplicates analyzed for each matrix?			X		
Were analytical duplicates analyzed at the appropriate frequency?			X		
Were RPDs or relative standard deviations within the laboratory QC limits?			X		
Method quantitation limits (MQLs):					
Are the MQLs for each method analyte included in the laboratory data package?	X				
Do the MQLs correspond to the concentration of the lowest non-zero calibration standard?	X				
Are unadjusted MQLs and DCSs included in the laboratory data package?	X				
Other problems/anomalies					
Are all known problems/anomalies/special conditions noted in this LRC and ER?	X				
Was applicable and available technology used to lower the SDL to minimize the matrix interference effects on the sample results?	X				
Is the laboratory NELAC-accredited under the Texas Laboratory Accreditation Program for the analytes, matrices and methods associated with this laboratory data package?	X				
Initial calibration (ICAL)					
Were response factors and/or relative response factors for each analyte within QC limits?	X				
Were percent RSDs or correlation coefficient criteria met?	X				

Texas Risk Reduction Program (TRRP) Checklist

Laboratory Name:	Microbac OVD	**Laboratory Log Number:**	L15050872
Project Name:		**Method:**	8260
Prep Batch Number(s):	523885,524783	**Reviewer Name:**	Franci Bolden
LRC Date:	2015-05-27 00:00:00		

Was the number of standards recommended in the method used for all analytes?	X				
Were all points generated between the lowest and highest standard used to calculate the curve?	X				
Are ICAL data available for all instruments used?	X				
Has the initial calibration curve been verified using an appropriate second source standard?	X				
Initial and continuing calibration verification (ICCV and CCV) and continuing calibration blank (CCB):					
Was the CCV analyzed at the method-required frequency?	X				
Were percent differences for each analyte within the method-required QC limits?		X			3
Was the ICAL curve verified for each analyte?		X			2
Was the absolute value of the analyte concentration in the inorganic CCB < MDL?			X		
Mass spectral tuning					
Was the appropriate compound for the method used for tuning?	X				
Were ion abundance data within the method-required QC limits?	X				
Internal standards (IS)					
Were IS area counts and retention times within the method-required QC limits?	X				
Raw data (NELAC Section 5.5.10)					
Were the raw data (for example, chromatograms, spectral data) reviewed by an analyst?	X				
Were data associated with manual integrations flagged on the raw data?	X				
Dual column confirmation					
Did dual column confirmation results meet the method-required QC?			X		
Tentatively identified compounds (TICs)					
If TICs were requested, were the mass spectra and TIC data subject to appropriate checks?			X		
Interference Check Sample (ICS) results					
Were percent recoveries within method QC limits?			X		
Serial dilutions, post digestion spikes, and method of standard additions					
Were percent differences, recoveries, and the linearity within the QC limits specified in the method?			X		
Method detection limit (MDL) studies					

Texas Risk Reduction Program (TRRP) Checklist

Laboratory Name:	Microbac OVD	**Laboratory Log Number:**	L15050872
Project Name:		**Method:**	8260
Prep Batch Number(s):	523885,524783	**Reviewer Name:**	Franci Bolden
LRC Date:	2015-05-27 00:00:00		

Was a MDL study performed for each reported analyte?	X				
Is the MDL either adjusted or supported by the analysis of DCSs?	X				
Proficiency test reports					
Was the laboratory's performance acceptable on the applicable proficiency tests or evaluation studies?	X				
Standards documentation					
Are all standards used in the analyses NIST-traceable or obtained from other appropriate sources?	X				
Compound/analyte identification procedures					
Are the procedures for compound/analyte identification documented?	X				
Demonstration of analyst competency (DOC)					
Was DOC conducted consistent with NELAC Chapter 5?	X				
Is documentation of the analyst's competency up-to-date and on file?	X				
Verification/validation documentation for methods (NELAC Chapter 5)					
Are all the methods used to generate the data documented, verified, and validated, where applicable?	X				
Laboratory standard operating procedures (SOPs)					
Are laboratory SOPs current and on file for each method performed	X				

1. Items identified by the letter “R” must be included in the laboratory data package submitted in the TRRP-required report(s). Items identified by the letter “S” should be retained and made available upon request for the appropriate retention period;
2. O = organic analyses; I = inorganic analyses (and general chemistry, when applicable);
3. NA = Not applicable;
4. NR = Not reviewed;
5. ER# = Exception Report identification number (an Exception Report should be completed for an item if “NR” or “No” is checked).

The Exception Report for each “No” or “Not Reviewed (NR)” item in Laboratory Review Checklist and for each analyte, matrix, and method for which the laboratory does not hold NELAC accreditation under the Texas Laboratory Accreditation Program.

Release Statement: I am responsible for the release of this laboratory data package. This laboratory is NELAC accredited under the Texas Laboratory Accreditation Program for all the methods, analytes, and matrices reported in this data package except as noted in the Exception Reports. The data have been reviewed and are technically compliant with the requirements of the methods used, except where noted by the laboratory in the Exception Reports. By my signature

Texas Risk Reduction Program (TRRP) Checklist

Laboratory Name:	Microbac OVD	**Laboratory Log Number:**	L15050872

LRC Date:	2015-05-27 00:00:00		

below, I affirm to the best of my knowledge all problems/anomalies observed by the laboratory have been identified in the Laboratory Review Checklist, and no information affecting the quality of the data has been knowingly withheld.

Check, if applicable: [ ] This laboratory meets an exception under 30 TAC §25.6 and was last inspection by [ ] TCEQ or [ ] _____ on **(enter date of last inspection**). Any findings affecting the data in this laboratory data package are noted in the Exception Reports herein. The official signing the cover page of the report in which these data are used is responsible for releasing this data package and is by signature affirming the above release statement is true.

Exceptions Report

1)Acetone was outside the control limits in the water MS/MSD.

2) Chloromethane, carbon disulfide and dichlorofluoromethane exceeded the UCL in the ICV analyzed 04/16/2015 on HPMS17.

3 Chloromethane, bromomethane, 2-butanone, 2-hexanone, and 4-methyl-2-pentanone exceeded the UCL in the CCV analyzed 05/15/2015 on HPMS 17. Hexachlorobutadiene exceed the UCL in the CCV analyzed 05/22/2015 on HPMS8.

2.1.1.2 QC Summary Data

Example 8260 Calculations

1.0 Calculating the Response Factor (RF) from the initial calibration (ICAL) data:

RF = [(Ax) (Cis)] / [(Ais) (Cx)]

where:	Example
Ax = Area of the characteristic ion for the compound being measured:	3399156
Cis = Concentration of the specific internal standard (ug/mL)	25
Ais = Area of the characteristic ion of the specific internal standard	846471
Cx = Concentration of the compound in the standard being measured (ug/mL)	100
RF = Calculated Response Factor	**1.0039**

2.0 Calculating the concentration (C) of a compound in water using the average RF: *

Cx = [(Ax) (Cis) (Vn)(D)] / [(Ais) (RF) (Vs)]

where:	**Example**
Ax = Area of the characteristic ion for the compound being measured	**3122498**
Cis = Concentration of the specific internal standard (ug/L)	**25**
D = Dilution factor for sample as a multiplier (10x = 10)	**1**
Ais = Area of the characteristic ion of the specific internal standard	**611048**
RF = Average RF from the ICAL	**1.004**
Vs = Purge volume of sample (mL)	**10**
Vn = Nominal purge volume of sample (mL) (10.0 mL)	**10**
Cx = Concentration of the compound in the sample being measured (ug/L)	**127.2428**

3.0 Calculating the concentration (C) of a compound in soil using the average RF: *

Cx = [(Ax) (Cis) (Wn)(D)] / [(Ais) (RF) (Ws)]

where:	**Example**
Ax = Area of the characteristic ion for the compound being measured	**3122498**
Cis = Concentration of the specific internal standard (ug/L)	**25**
D = Dilution factor for sample as a multiplier (10x = 10)	**1**
Ais = Area of the characteristic ion of the specific internal standard	**611048**
RF = Average RF from the ICAL	**1.004**
Ws = Weight of sample purged (g)	**5**
Wn = Nominal purge weight (g) (5.0 g)	**5**
Cx = Concentration of the compound in the sample being measured (ug/L)	**127.2428**

Dry weight correction:

Percent solids (PCT_S)	**50**
Cd = (Cx) (100)/PCT_S	**254.4856**

* Concentrations appearing on the instrument quantitation reports are on-column results and do not take into account initial volume, final volume, and the dilution factor.

4.0 Concentration from Linear Regression

Step 1: Retrieve Curve Data From Plot, y = mx + b

y = response ratio = response of analyte / response of IS = Ax/Ais

x = amount ratio = concentration analyte/concentration internal standard = Cx / Cis

m = slope from curve = 0.213

b = intercept from curve = - 0.00642

Step 2: Calculate y from Quantitation Report

y = 86550/593147 = 0.1459

Step 3: Solve for x

x = (y - b)/m = [(0.1459 -(- 0.00642)]/ 0.213 = 0.7152

Step 4: Solve for analyte concentration Cx

Cx = Cis (x) = (25.0)(0.7152) = 17.88

Example Spreadsheet Calculation:

Slope from curve, m:	**0.213**
Intercept from curve, b:	**-0.00642**
Area of analyte, Ax:	**86550**
Area of Internal Standard , Ais:	**593147**
Concentration of IS, Cis	**25.00**
Response Ratio:	**0.145917**
Amount Ratio:	**0.715195**
Concentration:	**17.87988**
Units of Internal Standard:	**ug/L**

5.0 Concentration from Quadratic Regression

Step 1 - Retrieve Curve Data from Plot, y = Ax^2 + Bx + C
Where:
Ax^2 + Bx + (C - y) = 0
A, B, C = constants from the ICAL quadratic regression
y = Response ratio = Area of analyte/Area of internal standard (IS)
x = Amount ratio = Concentration of analyte/concentration of IS

Step 2: Calculate y from Quantitation Report

y = Ax/Ais

Step 3: Solve for x using the quadratic formula
Ax^2 + Bx + C - y = 0

$$x = \frac{b \pm \sqrt{\left(b^2 - 4a(c - y)\right)}}{2a}$$ (Two possible solutions)

Step 4: Solve for analyte concentration Cx

Cx = (Cis)(Amount ratio)

Example Spreadsheet Calculation:

Value of A from plot:	**-0.00629**	
Value of B from plot:	**0.511**	
Value of C from plot:	**-0.0276**	
Area of unknown from quantitation report:	**293821**	
Area of IS from quantiation report:	**784848**	
Response ratio, y:	**0.374367**	
C - y:	**-0.40197**	
Root 1 - Computed amount ratio , X1:	**80.44567**	
Root 2 - Computed amount ratio , X2:	**0.794396**	use this solution
Concentration of IS, Cis:	**25.00**	
Concentration of analyte, Cx:	**19.86**	ug/L

Microbac Laboratories Inc.
List of Valid Qualifiers
May 28, 2015

Qualkey: DOD

Qualifier	Description
*	Surrogate or spike compound out of range
+	Correlation coefficient for the MSA is less than 0.995
<	Result is less than the associated numerical value.
>	Greater than
A	See the report narrative
B	The reported result is associated with a contaminated method blank.
B,H1	Analyte present in method blank. Sample analysis performed past holding time.
B1	Target analyte detected in method blank at or above the method reporting limit
B3	Target analyte detected in calibration blank at or above the method reporting limit
B4	The BOD unseeded dilution water blank exceeded 0.2 mg/L
C	Confirmed by GC/MS
CG	Confluent growth
CT1	Cooler temperature at sample reciept exceeded regulatory limit.
DL	Surrogate or spike compound was diluted out
E	Estimated concentration due to sample matrix interference
EDL	Elevated sample reporting limits, presence of non-target analytes
EMPC	Estimated Maximum Possible Concentration
F, S	Estimated result below quantitation limit; method of standard additions(MSA)
F,CT1	Estimated value; the analyte concentration was less than the RL/LOQ. The cooler temperature at receipt exceeded regula
FL	Free Liquid
H1	Sample analysis performed past holding time.
H1,CT1	Sample analysis performed past holding time. The cooler temperature at receipt exceeded regulatory guidelines for reque
I	Semiquantitative result (out of instrument calibration range)
J	Estimated concentration; sample matrix interference.
J	Estimated value ; the analyte concentration was greater than the highest standard
J	Estimated value ; the analyte concentration was less than the LOQ.
J	The reported result is an estimated value.
J,B	Analyte detected in both the method blank and sample above the MDL.
J,CT1	Estimated value ; the analyte concentration was less than the LOQ. Cooler temperature at sample reciept exceeded regu
J,H1	Estimated value ; the analyte concentration was less than the LOQ. Sample analysis performed past holding time.
J,H1	The reported result is an estimated value. Sample was analyzed past holding time.
J,P	Estimate; columns don't agree to within 40%
J,S	Estimated concentration; analyzed by method of standard addition (MSA)
JB	The reported result is an estimated value. The reported result is also associated with a contaminated method blank.
JQ	The reported result is an estimated value and one or more quality control criteria failed. See narrative.
L	Sample reporting limits elevated due to matrix interference
L1	The associated blank spike (LCS) recovery was above the laboratory acceptance limits.
L2	The associated blank spike (LCS) recovery was below the laboratory acceptance limits.
M	Matrix effect; the concentration is an estimate due to matrix effect.
N	Nontarget analyte; the analyte is a tentativlely identified compound (TIC) by GC/MS
NA	Not applicable
ND	Not detected at or above the reporting limit (RL/MDL).
ND, B	Not detected at or above the reporting limit (RL). Analyte present in method blank.
ND, CT1	Analyte was not detected. The concentration is below the reported LOD. The cooler temperature at receipt exceeded reg
ND, L	Not detected; sample reporting limit (RL) elevated due to interference
ND, S	Not detected; analyzed by method of standard addition (MSA)
ND,H1	Not detected; Sample analysis performed past holding time.
ND,H1,CT1	Not detected; Sample analysis performed past holding time. The cooler temperature at receipt exceeded regulatory guide
NF	Not found by library search
NFL	No free liquid
NI	Non-ignitable
NR	Analyte is not required to be analyzed
NS	Not spiked
P	Concentrations >40% difference between the two GC columns
Q	One or more quality control criteria failed. See narrative.
Q,H1	One or more quality control criteria failed. Sample analyzed past holding time. See narrative.
QNS	Quantity of sample not sufficient to perform analysis
RA	Reanalysis confirms reported results
RE	Reanalysis confirms sample matrix interference
S	Analyzed by method of standard addition (MSA)
SMI	Sample matrix interference on surrogate
SP	Reported results are for spike compounds only
T5	Laboratory not licensed for this parameter
TIC	Library Search Compound
TNTC	Too numerous to count
TNTC, B	Too numerous to count. Analyte present in method blank.
TNTC,CT1	Too numerous to count. The cooler temperature at receipt exceeded regulatory guidelines for requested testing.

Microbac Laboratories Inc.
List of Valid Qualifiers
May 28, 2015

Qualkey: DOD

TNTC,H1	Too numerous to count. Sample analysis performed past holding time.
U	Analyte was not detected. The concentration is below the reported LOD.
U,CT1	Analyte was not detected. The concentration is below the reported LOD. Cooler temperature at sample reciept exceeded
U,H1	Not detected; Sample analysis performed past holding time.
UJ	Undetected; the MDL and RL are estimated due to quality control discrepancies.
UQ	Undetected; the analyte was analyzed for, but not detected.
W	Post-digestion spike for furnace AA out of control limits
X	Exceeds regulatory limit
X, S	Exceeds regulatory limit; method of standard additions (MSA)
Z	Cannot be resolved from isomer - see below

NELAP Addendum - May 26, 2015

Non-NELAP LIMS Product and Description

The following is a list of those tests that are not included in the Microbac – OVL NELAP Scope of Accreditation:

Heat of Combustion (BTU)
Total Halide by Bomb Combustion (TX)
Particle Sizing - 200 Mesh (PS200)
Specific Gravity/Density (SPGRAV)
Total Residual Chlorine (CL-TRL)
Total Volatile Solids (all forms) (TVS)
Total Coliform Bacteria (all methods)
Fecal Coliform Bacteria (all methods)
Sulfite (SO3)
Formate (HPLC-UV)
Propionaldehyde (HPLC-UV)
Fluoroborate (ISE)
n-Butane (RSK175)

SOLID AND HAZARDOUS CHEMICALS
Nitrogen, Ammonia by Method 350.1
Chromium, Hexavalent, Leachable by SM3500 Cr-B 2009
Phenolics, Total by Method 420.1

NELAP Accreditation by Laboratory SOP

NONPOTABLE WATER

OVL HPLC02/HPLC-UV

Nitroglycerin
Acetic acid
Butyric acid
Lactic acid
Propionic acid
Pyruvic acid

OVL MSS01/GC-MS

1,4-Phenylenediamine
1-Methylnaphthalene
1,4-Dioxane
Atrazine
Benzaldehyde
Biphenyl
Caprolactam
Hexamethylphosphoramide (HMPA)
Pentachlorobenzene
Pentachloroethane

NELAP Accreditation by Laboratory SOP

NONPOTABLE WATER

OVL MSV0I/GC-MS

1, 1, 2-Trichloro-1,2,2-trifluoroethane
1,3-Butadiene
Cyclohexane
Cyclohexanone
Dimethyl disulfide
Dimethylsulfide
Ethyl-t-butylether (ETBE)
Isoprene
Methylacetate
Methylcyclohexane
T-amylmethylether (TAME)
Tetrahydrofuran (THF)

OVL RSKOI/GC-FID

Acetylene
Propane

OVL HPLC07/HPLC-MS-MS

Hexamethylphosphoramide (XMPA-LCMS)

OVL HPLC12/HPLC/UV
Acetate

SOLID AND HAZARDOUS CHEMICALS

OVL MSS0I/GC-MS

1-Methylnaphthalene
Benzaldehyde
Biphenyl
Caprolactam
Pentachloroethane

NELAP Accreditation by Laboratory SOP

SOLID AND HAZARDOUS CHEMICALS

OVL MSV0I/GC-MS

1.3-Butadiene
Cyclohexane
Cyclohexanone
Dimethyl disulfide

Dimethylsulfide
Ethyl-t-butylether (ETBE)
Isoprene
Methylacetate
Methylcyclohexane
n-Hexane
T-amylmethylether (TAME)

Microbac

Laboratory Report Number: L15051231

Kayla Teague
AECOM Technical Services, Inc.
16000 Dallas Parkway
Dallas, TX 75248

Please find enclosed the analytical results for the samples you submitted to Microbac Laboratories. Review and compilation of your report was completed by Microbac's Ohio Valley Division (OVD). If you have any questions, comments, or require further assistance regarding this report, please contact your service representative listed below.

Laboratory Contact:
Stephanie Mossburg – Team Chemist/Data Specialist
(740) 373-4071
Stephanie.Mossburg@microbac.com

I certify that all test results meet all of the requirements of the DoD QSM and other applicable contract terms and conditions. Any exceptions are attached to this cover page or addressed in the method narratives presented in the report. All results for soil samples are reported on a 'dry-weight' basis unless specified otherwise. Analytical results for water and wastes are reported on a 'as received' basis unless specified otherwise. A statement of uncertainty for each analysis is available upon request. This laboratory report shall not be reproduced, except in full, without the written approval of Microbac Laboratories, DoD ELAP certification number 2936.01. The reported results are related only to the samples analyzed as received.

This report was certified on June 01 2015

David Vandenberg – Managing Director

State of Origin: TX
Accrediting Authority: Texas Commission on Environmental Quality ID:T104704252-07-TX
QAPP: DOD Ver 4.1

Record of Sample Receipt and Inspection

Comments/Discrepancies

This is the record of the shipment conditions and the inspection records for the samples received and reported as a sample delivery group (SDG). All of the samples were inspected and observed to conform to our receipt policies, except as noted below.

The following discrepancies were noted:

Discrepancy	Resolution
Sample ID: 67WW08-051915 (5/19 @ 0825). 1 of 3 voa vials received with headspace and 1 of 3 RSK vials received with headspace. BRG Sample ID: 67WW01-051915 (5/19 @ 12:20). 1 of 3 RSK vials received with headspace. BRG	Please proceed.

Coolers

Cooler #	Temperature Gun	Temperature	COC #	Airbill #	Temp Required?
00112668	I	3.0		J2317161594	X

Inspection Checklist

#	Question	Result
1	Were shipping coolers sealed?	Yes
2	Were custody seals intact?	Yes
3	Were cooler temperatures in range of 0-6?	Yes
4	Was ice present?	Yes
5	Were COC's received/information complete/signed and dated?	Yes
6	Were sample containers intact and match COC?	Yes
7	Were sample labels intact and match COC?	Yes
8	Were the correct containers and volumes received?	Yes
9	Were samples received within EPA hold times?	Yes
10	Were correct preservatives used? (water only)	Yes
11	Were pH ranges acceptable? (voa's excluded)	Yes
12	Were VOA samples free of headspace (less than 6mm)?	No

Laboratory Data Package Cover Page

X	R1	Field chain-of-custody documentation;
X	R2	Sample identification cross-reference;
X	R3	Test reports (analytical data sheets) for each environmental sample that includes: (a) Items consistent with NELAC Chapter 5, (b) dilution factors, (c) preparation methods, (d) cleanup methods, and (e) a.if required for the project, tentatively identified compounds (TICs).
X	R4	Surrogate recovery data including: (a) Calculated recovery (%R), and (b) the laboratory's surrogate QC limits.
X	R5	Test reports/summary forms for blank samples;
X	R6	Test reports/summary forms for laboratory control samples (LCSs) including: (a) LCS spiking amounts, (b) calculated %R for each analyte, and (c) the laboratory's LCS QC limits.
X	R7	Test reports for project matrix spike/matrix spike duplicates (MS/MSDs) including: (a) samples associated with the MS/MSD clearly identified, (b) MS/MSD spiking compounds, (c) concentration of each MS/MSD analyte measured in the parent and spiked samples, (d) calculated %Rs and relative percent differences (RPDs), and (e) the laboratory's MS/MSD QC limits.
X	R8	Laboratory analytical duplicate (if applicable) recovery and precision: (a) the amount of analyte measured in the duplicate, (b) the calculated RPD, and (c) the laboratory's QC limits for analytical duplicates.
X	R9	List of method quantitation limits (MQLs) and detectability check sample results for each analyte for each method and matrix.
X	R10	Other problems or anomalies.

Texas Risk Reduction Program (TRRP) Checklist

Laboratory Name:	Microbac OVD	**Laboratory Log Number:**	L15051231
Project Name:		**Method:**	8260
Prep Batch Number(s):	524936,525056	**Reviewer Name:**	Franci Bolden
LRC Date:	2015-05-29 00:00:00		

Description	Yes	No	NA	NR	ER#
Chain-of-custody (C-O-C)					
Did samples meet the laboratory's standard conditions of sample acceptability upon receipt?	X				
Were all departures from standard conditions described in an exception report?	X				
Sample and quality control (QC) identification	X				
Are all field sample ID numbers cross-referenced to the laboratory ID numbers?	X				
Are all laboratory ID numbers cross-referenced to the corresponding QC data?	X				
Test reports					
Were all samples prepared and analyzed within holding times?	X				
Other than those results < MQL, were all other raw values bracketed by calibration standards?	X				
Were calculations checked by a peer or supervisor?	X				
Were all analyte identifications checked by a peer or supervisor?	X				
Were sample detection limits reported for all analytes not detected?	X				
Were all results for soil and sediment samples reported on a dry weight basis?	X				
Were % moisture (or solids) reported for all soil and sediment samples?	X				
Were bulk soils/solids samples for volatile analysis extracted with methanol per SW846 Method 5035?			X		
If required for the project, are TICs reported?			X		
Surrogate recovery data					
Were surrogates added prior to extraction?	X				
Were surrogate percent recoveries in all samples within the laboratory QC limits?	X				
Test reports/summary forms for blank samples	X				
Were appropriate type(s) of blanks analyzed?	X				
Were blanks analyzed at the appropriate frequency?	X				
Were method blanks taken through the entire analytical process, including preparation and, if applicable, cleanup procedures?	X				
Were blank concentrations < MQL?	X				
Laboratory control samples (LCS):					
Were all COCs included in the LCS?	X				

Texas Risk Reduction Program (TRRP) Checklist

Laboratory Name:	Microbac OVD	**Laboratory Log Number:**	L15051231
Project Name:		**Method:**	8260
Prep Batch Number(s):	524936,525056	**Reviewer Name:**	Franci Bolden
LRC Date:	2015-05-29 00:00:00		

Was each LCS taken through the entire analytical procedure, including prep and cleanup steps?	X				
Were LCSs analyzed at the required frequency?	X				
Were LCS (and LCSD, if applicable) %Rs within the laboratory QC limits?		X			1
Does the detectability check sample data document the laboratory's capability to detect the COCs at the MDL used to calculate the SDLs?	X				
Was the LCSD RPD within QC limits?	X				
Matrix spike (MS) and matrix spike duplicate (MSD) data					
Were the project/method specified analytes included in the MS and MSD?			X		
Were MS/MSD analyzed at the appropriate frequency?			X		
Were MS (and MSD, if applicable) %Rs within the laboratory QC limits?			X		
Were MS/MSD RPDs within laboratory QC limits?			X		
Analytical duplicate data					
Were appropriate analytical duplicates analyzed for each matrix?			X		
Were analytical duplicates analyzed at the appropriate frequency?			X		
Were RPDs or relative standard deviations within the laboratory QC limits?			X		
Method quantitation limits (MQLs):					
Are the MQLs for each method analyte included in the laboratory data package?	X				
Do the MQLs correspond to the concentration of the lowest non-zero calibration standard?	X				
Are unadjusted MQLs and DCSs included in the laboratory data package?	X				
Other problems/anomalies					
Are all known problems/anomalies/special conditions noted in this LRC and ER?	X				
Was applicable and available technology used to lower the SDL to minimize the matrix interference effects on the sample results?	X				
Is the laboratory NELAC-accredited under the Texas Laboratory Accreditation Program for the analytes, matrices and methods associated with this laboratory data package?	X				
Initial calibration (ICAL)					
Were response factors and/or relative response factors for each analyte within QC limits?	X				
Were percent RSDs or correlation coefficient criteria met?	X				

Microbac

Texas Risk Reduction Program (TRRP) Checklist

Laboratory Name:	Microbac OVD	**Laboratory Log Number:**	L15051231
Project Name:		**Method:**	8260
Prep Batch Number(s):	524936,525056	**Reviewer Name:**	Franci Bolden
LRC Date:	2015-05-29 00:00:00		

Was the number of standards recommended in the method used for all analytes?	X				
Were all points generated between the lowest and highest standard used to calculate the curve?	X				
Are ICAL data available for all instruments used?	X				
Has the initial calibration curve been verified using an appropriate second source standard?	X				
Initial and continuing calibration verification (ICCV and CCV) and continuing calibration blank (CCB):					
Was the CCV analyzed at the method-required frequency?	X				
Were percent differences for each analyte within the method-required QC limits?		X			2
Was the ICAL curve verified for each analyte?	X				
Was the absolute value of the analyte concentration in the inorganic CCB < MDL?			X		
Mass spectral tuning					
Was the appropriate compound for the method used for tuning?	X				
Were ion abundance data within the method-required QC limits?	X				
Internal standards (IS)					
Were IS area counts and retention times within the method-required QC limits?	X				
Raw data (NELAC Section 5.5.10)					
Were the raw data (for example, chromatograms, spectral data) reviewed by an analyst?	X				
Were data associated with manual integrations flagged on the raw data?	X				
Dual column confirmation					
Did dual column confirmation results meet the method-required QC?			X		
Tentatively identified compounds (TICs)					
If TICs were requested, were the mass spectra and TIC data subject to appropriate checks?			X		
Interference Check Sample (ICS) results					
Were percent recoveries within method QC limits?			X		
Serial dilutions, post digestion spikes, and method of standard additions					
Were percent differences, recoveries, and the linearity within the QC limits specified in the method?			X		
Method detection limit (MDL) studies					

Texas Risk Reduction Program (TRRP) Checklist

Laboratory Name:	Microbac OVD	**Laboratory Log Number:**	L15051231
Project Name:		**Method:**	8260
Prep Batch Number(s):	524936,525056	**Reviewer Name:**	Franci Bolden
LRC Date:	2015-05-29 00:00:00		

Was a MDL study performed for each reported analyte?	X				
Is the MDL either adjusted or supported by the analysis of DCSs?	X				
Proficiency test reports					
Was the laboratory's performance acceptable on the applicable proficiency tests or evaluation studies?	X				
Standards documentation					
Are all standards used in the analyses NIST-traceable or obtained from other appropriate sources?	X				
Compound/analyte identification procedures					
Are the procedures for compound/analyte identification documented?	X				
Demonstration of analyst competency (DOC)					
Was DOC conducted consistent with NELAC Chapter 5?	X				
Is documentation of the analyst's competency up-to-date and on file?	X				
Verification/validation documentation for methods (NELAC Chapter 5)					
Are all the methods used to generate the data documented, verified, and validated, where applicable?	X				
Laboratory standard operating procedures (SOPs)					
Are laboratory SOPs current and on file for each method performed	X				

1. Items identified by the letter “R” must be included in the laboratory data package submitted in the TRRP-required report(s). Items identified by the letter “S” should be retained and made available upon request for the appropriate retention period;
2. O = organic analyses; I = inorganic analyses (and general chemistry, when applicable);
3. NA = Not applicable;
4. NR = Not reviewed;
5. ER# = Exception Report identification number (an Exception Report should be completed for an item if “NR” or “No” is checked).

The Exception Report for each “No” or “Not Reviewed (NR)” item in Laboratory Review Checklist and for each analyte, matrix, and method for which the laboratory does not hold NELAC accreditation under the Texas Laboratory Accreditation Program.

Release Statement: I am responsible for the release of this laboratory data package. This laboratory is NELAC accredited under the Texas Laboratory Accreditation Program for all the methods, analytes, and matrices reported in this data package except as noted in the Exception Reports. The data have been reviewed and are technically compliant with the requirements of the methods used, except where noted by the laboratory in the Exception Reports. By my signature

Texas Risk Reduction Program (TRRP) Checklist

Laboratory Name:	Microbac OVD	**Laboratory Log Number:**	L15051231

below, I affirm to the best of my knowledge all problems/anomalies observed by the laboratory have been identified in the Laboratory Review Checklist, and no information affecting the quality of the data has been knowingly withheld.

Check, if applicable: [ ] This laboratory meets an exception under 30 TAC §25.6 and was last inspection by [ ] TCEQ or [ ] _____ on **(enter date of last inspection**). Any findings affecting the data in this laboratory data package are noted in the Exception Reports herein. The official signing the cover page of the report in which these data are used is responsible for releasing this data package and is by signature affirming the above release statement is true.

Exceptions Report

1)2-Chlorotoluene Exceeded the %REC in the LCS analyzed 05/23/2015 on HPMS8.

2)Bromomethaneexceeded the UCL in the CCV analyzed 05/23/2015 onHPMS8.

Description	Yes	No	NA	NR	ER#
Chain-of-custody (C-O-C)					
Did samples meet the laboratory's standard conditions of sample acceptability upon receipt?	X				
Were all departures from standard conditions described in an exception report?	X				
Sample and quality control (QC) identification	X				
Are all field sample ID numbers cross-referenced to the laboratory ID numbers?	X				
Are all laboratory ID numbers cross-referenced to the corresponding QC data?	X				
Test reports					
Were all samples prepared and analyzed within holding times?	X				
Other than those results < MQL, were all other raw values bracketed by calibration standards?	X				
Were calculations checked by a peer or supervisor?	X				
Were all analyte identifications checked by a peer or supervisor?	X				
Were sample detection limits reported for all analytes not detected?	X				
Were all results for soil and sediment samples reported on a dry weight basis?			X		
Were % moisture (or solids) reported for all soil and sediment samples?			X		
Were bulk soils/solids samples for volatile analysis extracted with methanol per SW846 Method 5035?			X		
If required for the project, are TICs reported?			X		
Surrogate recovery data					
Were surrogates added prior to extraction?			X		
Were surrogate percent recoveries in all samples within the laboratory QC limits?			X		
Test reports/summary forms for blank samples	X				
Were appropriate type(s) of blanks analyzed?	X				
Were blanks analyzed at the appropriate frequency?	X				
Were method blanks taken through the entire analytical process, including preparation and, if applicable, cleanup procedures?	X				
Were blank concentrations < MQL?	X				
Laboratory control samples (LCS):					
Were all COCs included in the LCS?	X				

Texas Risk Reduction Program (TRRP) Checklist

Laboratory Name:	Microbac OVD	**Laboratory Log Number:**	L15051231
Project Name:		**Method:**	RSK175
Prep Batch Number(s):	524390	**Reviewer Name:**	Franci Bolden
LRC Date:	2015-05-22 00:00:00		

Was each LCS taken through the entire analytical procedure, including prep and cleanup steps?	X				
Were LCSs analyzed at the required frequency?	X				
Were LCS (and LCSD, if applicable) %Rs within the laboratory QC limits?	X				
Does the detectability check sample data document the laboratory's capability to detect the COCs at the MDL used to calculate the SDLs?	X				
Was the LCSD RPD within QC limits?	X				
Matrix spike (MS) and matrix spike duplicate (MSD) data					
Were the project/method specified analytes included in the MS and MSD?			X		
Were MS/MSD analyzed at the appropriate frequency?			X		
Were MS (and MSD, if applicable) %Rs within the laboratory QC limits?			X		
Were MS/MSD RPDs within laboratory QC limits?			X		
Analytical duplicate data					
Were appropriate analytical duplicates analyzed for each matrix?			X		
Were analytical duplicates analyzed at the appropriate frequency?			X		
Were RPDs or relative standard deviations within the laboratory QC limits?			X		
Method quantitation limits (MQLs):					
Are the MQLs for each method analyte included in the laboratory data package?	X				
Do the MQLs correspond to the concentration of the lowest non-zero calibration standard?	X				
Are unadjusted MQLs and DCSs included in the laboratory data package?	X				
Other problems/anomalies					
Are all known problems/anomalies/special conditions noted in this LRC and ER?	X				
Was applicable and available technology used to lower the SDL to minimize the matrix interference effects on the sample results?	X				
Is the laboratory NELAC-accredited under the Texas Laboratory Accreditation Program for the analytes, matrices and methods associated with this laboratory data package?	X				
Initial calibration (ICAL)					
Were response factors and/or relative response factors for each analyte within QC limits?	X				
Were percent RSDs or correlation coefficient criteria met?	X				

Microbac

Prep Batch Number(s):	524390	**Reviewer Name:**	Franci Bolden
LRC Date:	2015-05-22 00:00:00		

Was the number of standards recommended in the method used for all analytes?	X				
Were all points generated between the lowest and highest standard used to calculate the curve?	X				
Are ICAL data available for all instruments used?	X				
Has the initial calibration curve been verified using an appropriate second source standard?	X				
Initial and continuing calibration verification (ICCV and CCV) and continuing calibration blank (CCB):					
Was the CCV analyzed at the method-required frequency?	X				
Were percent differences for each analyte within the method-required QC limits?	X				
Was the ICAL curve verified for each analyte?	X				
Was the absolute value of the analyte concentration in the inorganic CCB < MDL?			X		
Mass spectral tuning					
Was the appropriate compound for the method used for tuning?			X		
Were ion abundance data within the method-required QC limits?			X		
Internal standards (IS)					
Were IS area counts and retention times within the method-required QC limits?			X		
Raw data (NELAC Section 5.5.10)					
Were the raw data (for example, chromatograms, spectral data) reviewed by an analyst?	X				
Were data associated with manual integrations flagged on the raw data?	X				
Dual column confirmation					
Did dual column confirmation results meet the method-required QC?			X		
Tentatively identified compounds (TICs)					
If TICs were requested, were the mass spectra and TIC data subject to appropriate checks?			X		
Interference Check Sample (ICS) results					
Were percent recoveries within method QC limits?			X		
Serial dilutions, post digestion spikes, and method of standard additions					
Were percent differences, recoveries, and the linearity within the QC limits specified in the method?			X		
Method detection limit (MDL) studies

Laboratory Data Package Cover Page

	R1	Field chain-of-custody documentation;
	R2	Sample identification cross-reference;
	R3	Test reports (analytical data sheets) for each environmental sample that includes: (a) Items consistent with NELAC Chapter 5, (b) dilution factors, (c) preparation methods, (d) cleanup methods, and (e) a.if required for the project, tentatively identified compounds (TICs).
	R4	Surrogate recovery data including: (a) Calculated recovery (%R), and (b) the laboratory's surrogate QC limits.
	R5	Test reports/summary forms for blank samples;
	R6	Test reports/summary forms for laboratory control samples (LCSs) including: (a) LCS spiking amounts, (b) calculated %R for each analyte, and (c) the laboratory's LCS QC limits.
	R7	Test reports for project matrix spike/matrix spike duplicates (MS/MSDs) including: (a) samples associated with the MS/MSD clearly identified, (b) MS/MSD spiking compounds, (c) concentration of each MS/MSD analyte measured in the parent and spiked samples, (d) calculated %Rs and relative percent differences (RPDs), and (e) the laboratory's MS/MSD QC limits.
	R8	Laboratory analytical duplicate (if applicable) recovery and precision: (a) the amount of analyte measured in the duplicate, (b) the calculated RPD, and (c) the laboratory's QC limits for analytical duplicates.
	R9	List of method quantitation limits (MQLs) and detectability check sample results for each analyte for each method and matrix.
	R10	Other problems or anomalies.

Exceptions Report

1. Fractions -01, -04 and -05 were analyzed at dilutions only due to their high analyte concentrations (Cl and/or SO4) which were over 200 ppm. Any sample that has a single anion load greater than 200 ppm (or a total anion load greater than 400 ppm) will be diluted in order to prevent damage to the IC from repeated overloading of the analytical column and oversaturation of the suppressor membranes.

Laboratory Data Package Cover Page

	R1	Field chain-of-custody documentation;
	R2	Sample identification cross-reference;
	R3	Test reports (analytical data sheets) for each environmental sample that includes: (a) Items consistent with NELAC Chapter 5, (b) dilution factors, (c) preparation methods, (d) cleanup methods, and (e) a.if required for the project, tentatively identified compounds (TICs).
	R4	Surrogate recovery data including: (a) Calculated recovery (%R), and (b) the laboratory's surrogate QC limits.
	R5	Test reports/summary forms for blank samples;
	R6	Test reports/summary forms for laboratory control samples (LCSs) including: (a) LCS spiking amounts, (b) calculated %R for each analyte, and (c) the laboratory's LCS QC limits.
	R7	Test reports for project matrix spike/matrix spike duplicates (MS/MSDs) including: (a) samples associated with the MS/MSD clearly identified, (b) MS/MSD spiking compounds, (c) concentration of each MS/MSD analyte measured in the parent and spiked samples, (d) calculated %Rs and relative percent differences (RPDs), and (e) the laboratory's MS/MSD QC limits.
	R8	Laboratory analytical duplicate (if applicable) recovery and precision: (a) the amount of analyte measured in the duplicate, (b) the calculated RPD, and (c) the laboratory's QC limits for analytical duplicates.
	R9	List of method quantitation limits (MQLs) and detectability check sample results for each analyte for each method and matrix.
	R10	Other problems or anomalies.

Description	Yes	No	NA	NR	ER#
Chain-of-custody (C-O-C)					
Did samples meet the laboratory's standard conditions of sample acceptability upon receipt?	X				
Were all departures from standard conditions described in an exception report?	X				
Sample and quality control (QC) identification					
Are all field sample ID numbers cross-referenced to the laboratory ID numbers?	X				
Are all laboratory ID numbers cross-referenced to the corresponding QC data?	X				
Test reports					
Were all samples prepared and analyzed within holding times?	X				
Other than those results < MQL, were all other raw values bracketed by calibration standards?	X				
Were calculations checked by a peer or supervisor?	X				
Were all analyte identifications checked by a peer or supervisor?	X				
Were sample detection limits reported for all analytes not detected?	X				
Were all results for soil and sediment samples reported on a dry weight basis?	X				
Were % moisture (or solids) reported for all soil and sediment samples?	X				
Were bulk soils/solids samples for volatile analysis extracted with methanol per SW846 Method 5035?			X		
If required for the project, are TICs reported?			X		
Surrogate recovery data					
Were surrogates added prior to extraction?			X		
Were surrogate percent recoveries in all samples within the laboratory QC limits?			X		
Test reports/summary forms for blank samples					
Were appropriate type(s) of blanks analyzed?	X				
Were blanks analyzed at the appropriate frequency?	X				
Were method blanks taken through the entire analytical process, including preparation and, if applicable, cleanup procedures?	X				
Were blank concentrations < MQL?	X				
Laboratory control samples (LCS):	X				
Were all COCs included in the LCS?	X				

Texas Risk Reduction Program (TRRP) Checklist

Laboratory Name:	Microbac OVD	**Laboratory Log Number:**	L15051231
Project Name:		**Method:**	S
Prep Batch Number(s):	WG524848	**Reviewer Name:**	Deanna Hesson
LRC Date:	2015-05-27 00:00:00		

Was each LCS taken through the entire analytical procedure, including prep and cleanup steps?	X				
Were LCSs analyzed at the required frequency?	X				
Were LCS (and LCSD, if applicable) %Rs within the laboratory QC limits?	X				
Does the detectability check sample data document the laboratory's capability to detect the COCs at the MDL used to calculate the SDLs?	X				
Was the LCSD RPD within QC limits?	X				
Matrix spike (MS) and matrix spike duplicate (MSD) data					
Were the project/method specified analytes included in the MS and MSD?			X		
Were MS/MSD analyzed at the appropriate frequency?			X		
Were MS (and MSD, if applicable) %Rs within the laboratory QC limits?			X		
Were MS/MSD RPDs within laboratory QC limits?			X		
Analytical duplicate data					
Were appropriate analytical duplicates analyzed for each matrix?	X				
Were analytical duplicates analyzed at the appropriate frequency?	X				
Were RPDs or relative standard deviations within the laboratory QC limits?			X		
Method quantitation limits (MQLs):					
Are the MQLs for each method analyte included in the laboratory data package?	X				
Do the MQLs correspond to the concentration of the lowest non-zero calibration standard?	X				
Are unadjusted MQLs and DCSs included in the laboratory data package?	X				
Other problems/anomalies					
Are all known problems/anomalies/special conditions noted in this LRC and ER?	X				
Was applicable and available technology used to lower the SDL to minimize the matrix interference effects on the sample results?			X		
Is the laboratory NELAC-accredited under the Texas Laboratory Accreditation Program for the analytes, matrices and methods associated with this laboratory data package?	X				
Initial calibration (ICAL)					
Were response factors and/or relative response factors for each analyte within QC limits?	X				
Were percent RSDs or correlation coefficient criteria met?	X				

Texas Risk Reduction Program (TRRP) Checklist

Laboratory Name:	Microbac OVD	**Laboratory Log Number:**	L15051231
Project Name:		**Method:**	S
Prep Batch Number(s):	WG524848	**Reviewer Name:**	Deanna Hesson
LRC Date:	2015-05-27 00:00:00		

Was the number of standards recommended in the method used for all analytes?	X				
Were all points generated between the lowest and highest standard used to calculate the curve?	X				
Are ICAL data available for all instruments used?	X				
Has the initial calibration curve been verified using an appropriate second source standard?	X				
Initial and continuing calibration verification (ICCV and CCV) and continuing calibration blank (CCB):					
Was the CCV analyzed at the method-required frequency?			X		
Were percent differences for each analyte within the method-required QC limits?			X		
Was the ICAL curve verified for each analyte?			X		
Was the absolute value of the analyte concentration in the inorganic CCB < MDL?			X		
Mass spectral tuning					
Was the appropriate compound for the method used for tuning?			X		
Were ion abundance data within the method-required QC limits?			X		
Internal standards (IS)					
Were IS area counts and retention times within the method-required QC limits?			X		
Raw data (NELAC Section 5.5.10)			X		
Were the raw data (for example, chromatograms, spectral data) reviewed by an analyst?	X				
Were data associated with manual integrations flagged on the raw data?			X		
Dual column confirmation					
Did dual column confirmation results meet the method-required QC?			X		
Tentatively identified compounds (TICs)			X		
If TICs were requested, were the mass spectra and TIC data subject to appropriate checks?			X		
Interference Check Sample (ICS) results					
Were percent recoveries within method QC limits?			X		
Serial dilutions, post digestion spikes, and method of standard additions			X		
Were percent differences, recoveries, and the linearity within the QC limits specified in the method?			X		
Method detection limit (MDL) studies

2.1.1.2 QC Summary Data

Example 8260 Calculations

1.0 Calculating the Response Factor (RF) from the initial calibration (ICAL) data:

RF = [(Ax) (Cis)] / [(Ais) (Cx)]

where:	Example
Ax = Area of the characteristic ion for the compound being measured:	3399156
Cis = Concentration of the specific internal standard (ug/mL)	25
Ais = Area of the characteristic ion of the specific internal standard	846471
Cx = Concentration of the compound in the standard being measured (ug/mL)	100
RF = Calculated Response Factor	**1.0039**

2.0 Calculating the concentration (C) of a compound in water using the average RF: *

Cx = [(Ax) (Cis) (Vn)(D)] / [(Ais) (RF) (Vs)]

where:	**Example**
Ax = Area of the characteristic ion for the compound being measured	**3122498**
Cis = Concentration of the specific internal standard (ug/L)	**25**
D = Dilution factor for sample as a multiplier (10x = 10)	**1**
Ais = Area of the characteristic ion of the specific internal standard	**611048**
RF = Average RF from the ICAL	**1.004**
Vs = Purge volume of sample (mL)	**10**
Vn = Nominal purge volume of sample (mL) (10.0 mL)	**10**
Cx = Concentration of the compound in the sample being measured (ug/L)	**127.2428**

3.0 Calculating the concentration (C) of a compound in soil using the average RF: *

Cx = [(Ax) (Cis) (Wn)(D)] / [(Ais) (RF) (Ws)]

where:	**Example**
Ax = Area of the characteristic ion for the compound being measured	**3122498**
Cis = Concentration of the specific internal standard (ug/L)	**25**
D = Dilution factor for sample as a multiplier (10x = 10)	**1**
Ais = Area of the characteristic ion of the specific internal standard	**611048**
RF = Average RF from the ICAL	**1.004**
Ws = Weight of sample purged (g)	**5**
Wn = Nominal purge weight (g) (5.0 g)	**5**
Cx = Concentration of the compound in the sample being measured (ug/L)	**127.2428**

Dry weight correction:

Percent solids (PCT_S)	**50**
Cd = (Cx) (100)/PCT_S	**254.4856**

* Concentrations appearing on the instrument quantitation reports are on-column results and do not take into account initial volume, final volume, and the dilution factor.

4.0 Concentration from Linear Regression

Step 1: Retrieve Curve Data From Plot, y = mx + b

y = response ratio = response of analyte / response of IS = Ax/Ais

x = amount ratio = concentration analyte/concentration internal standard = Cx / Cis

m = slope from curve = 0.213

b = intercept from curve = - 0.00642

Step 2: Calculate y from Quantitation Report

y = 86550/593147 = 0.1459

Step 3: Solve for x

x = (y - b)/m = [(0.1459 -(- 0.00642)]/ 0.213 = 0.7152

Step 4: Solve for analyte concentration Cx

Cx = Cis (x) = (25.0)(0.7152) = 17.88

Example Spreadsheet Calculation:

Slope from curve, m:	**0.213**
Intercept from curve, b:	**-0.00642**
Area of analyte, Ax:	**86550**
Area of Internal Standard , Ais:	**593147**
Concentration of IS, Cis	**25.00**
Response Ratio:	**0.145917**
Amount Ratio:	**0.715195**
Concentration:	**17.87988**
Units of Internal Standard:	**ug/L**

5.0 Concentration from Quadratic Regression

Step 1 - Retrieve Curve Data from Plot, y = Ax^2 + Bx + C
Where:
Ax^2 + Bx + (C - y) = 0
A, B, C = constants from the ICAL quadratic regression
y = Response ratio = Area of analyte/Area of internal standard (IS)
x = Amount ratio = Concentration of analyte/concentration of IS

Step 2: Calculate y from Quantitation Report

y = Ax/Ais

Step 3: Solve for x using the quadratic formula
Ax^2 + Bx + C - y = 0

$$x = \frac{b \pm \sqrt{\left(b^2 - 4a(c - y)\right)}}{2a}$$ (Two possible solutions)

Step 4: Solve for analyte concentration Cx

Cx = (Cis)(Amount ratio)

Example Spreadsheet Calculation:

Value of A from plot:	**-0.00629**	
Value of B from plot:	**0.511**	
Value of C from plot:	**-0.0276**	
Area of unknown from quantitation report:	**293821**	
Area of IS from quantiation report:	**784848**	
Response ratio, y:	**0.374367**	
C - y:	**-0.40197**	
Root 1 - Computed amount ratio , X1:	**80.44567**	
Root 2 - Computed amount ratio , X2:	**0.794396**	use this solution
Concentration of IS, Cis:	**25.00**	
Concentration of analyte, Cx:	**19.86**	ug/L

2.1.2.2 QC Summary Data

RSK-175 - Example Calculation for Methane

1.0 Linear Calibration Models

Option A - Average RF Method

ICAL_x	ICAL_r		RF
1.67	19901		11917
6.67	69174		10371
16.7	176923		10594
66.7	685135		10272
133	1324853		9961
300	2845104		9484
		Average RF:	**10433**

Where:
ICAL_x = the ICAL concentration
ICAL_r = the ICAL response (area)
RF = calibration factor = ICAL_r / ICAL_x

Option B - Agilent Linear Regression Constant

ICAL_x	ICAL_r	[ICAL_r}^2	[ICAL-x][ICAL-r]
1.67	19901	396049801	33235
6.67	69174	4785042276	461391
16.7	176923	31301747929	2954614
66.7	685135	4.6941E+11	45698505
133	1324853	1.75524E+12	176205449
300	2845104	8.09462E+12	853531200
Summation:		**1.03557E+13**	**1078884393**

Agilent Linear Regression Constant : **9598.567853**
(1.03557E+13)/1078884393)

2.0 Calculate the concentration in extract, Cx

Where:

y = area response of methane from quant report	**1157414**
a = average RF (or Agilent regression constant)	**10433.00**
Cx = y/a	**110.9377935**

3.0 Calculate the concentration in sample

Cs = Cx (MW/Tf) (HS/S) (DF)

Where:

Cx = Concentration in extract	**110.9377935**	umol/mol
MW = molecular weight of analyte	**16.04**	ug/umol
TF = temperature factor = (22.4)(313/273)	**25.68**	L/mol
HS = headspace volume	**0.015**	L
S = sample volume remaining after headspace removal	**0.00547**	L
DF = dilution factor	**2**	
Cs = calculated sample concentration	**380.034301**	ug/L

RSK-175 - Example Calculation for Carbon Dioxide

ICAL Plot - Quadratic Regression (y = Ax^2 + Bx +C)

Ax^2 + Bx + (C - y) = 0

Step 1 - Calculate the concentration in extract, Cx

Data from quadratic regression plot:		
Value of A from plot:	**0.916**	
Value of B from plot:	**1540**	
Value of C from plot:	**0**	
Response for methane from quantitation report (y):	**8763828**	
Value of C - y	**-8763828**	
Solving for Cx using the quadratic formula:		
Root 1 - Computed Cx1:	**2364.716284**	umol/mol
Root 2 - Computed Cx2:	**-4045.938991**	

Step 2 - Calculate the concentration in sample

Cs = Cx (MW/Tf) (HS/S) (DF)

Where:

Cx = Concentration in extract :	**2364.716284**	umol/mol
MW = molecular weight of analyte:	**44.0**	ug/umol
TF = temperature factor = (22.4)(313/273):	**25.68**	L/mol
HS = initial headspace volume (extraction log):	**0.015**	L
S = final volume (extraction log):	**0.00547**	L
DF = dilution factor:	**10**	
Cs = calculated sample concentration:	**111106.798**	ug/L

Other Notes:

Temperature of headspace = 40 C = 313 K

Analyte	**MW (g/mol)**
Methane	16.04
Ethane	30.07
Ethene	28.05
Propane	44.1
Carbon Dioxide	44.0

Sample ID: WG524389-03
Instrument ID: HP16
Run Time: 17:46
Method: RSK175
File ID: 16G47567
Analyst: JDS
QC Key: DOD4
Workgroup (AAB#): WG524390
Cal ID: HP16 - 03-MAR-15
Matrix: WATER

Analyte		Expected	Found	UNITS	RF	%D	UCL	Q
methane		228	216	ug/L	179000	5.24	15	
ethene		398	374	ug/L	298000	6.12	15	
ethane		427	393	ug/L	313000	8.01	15	

* Exceeds %D Criteria

2.2.1.2 QC Summary Data

Example Calculations - Ion Chromatography

A. Methods 9056/300.0 (Quadratic with Offset)

1. Retrieve Curve Data from the ICAL Curve

c2 = the value of curve constant
c1= the curve slope
c0 = the curve offset

2. Obtain the area, y , from the instrument raw data

3. Calculate the concentration of the analyte, f(y), where:

$$f(y) = \frac{1}{2 * c_2} * \left(- c_1 \pm \sqrt{c_1^2 - 4 * c_2 * (c_0 - y)}\right)$$

Example Calculation:

Value of constant, c2, (curve):	0.0003
Value of curve constant, c1, (slope):	0.0869
Value of curve constant, c0, (offset):	-0.0103
Area of target analyte, y, (uS*min):	2.993
Calculated concentration, f(y), (mg/L):	31.1998864
or:	-40.1161215 *
Dilution factor (D):	1.00
Concentration of analyte in sample (mg/L):	31.200

* There are two possible solutions, but only one is valid.

B. Method 314.0 - Perchlorate (Linear)

Retrieve Curve Data from Linear Plot

c1 = the curve slope

Obtain the area, y , from the quantitation report

Calculate the concentration of the analyte, f(y), where:

f (y) = y / c1

Example Calculation:

Value of c1, slope:	0.0034
Area of target analyte, y:	0.083
Calculated concentration:	24.4117647
Dilution Factor:	1
Concentration in sample:	24.4117647

2.2.2.2 QC Summary Data

Example Calculations for Visible Spectrophotometric Methods

Linear Calibration Model

Step 1 - Retrieve Curve Data from ICAL

m = slope of the linear equation
b = intercept from the linear equation
y = instrument response as absorbance or OD
x = concentration of analyte (mg/L)
y = mx + b

Step 2: Calculate the instrument concentration, x

Where:

x = (y - b)/m

Step 3: Solve for analyte concentration in sample, Cx

Cx = (x) (D)

Example Calculation (LCS):

Value of m from plot:	7.809
Value of b from plot:	0.0004135
Absorbance of unknown from quantitation report (y):	0.31
Calculated concentration (x):	0.03964483
Dilution factor (D):	1.00
Concentration of analyte in sample, Cy:	0.0396 mg/L

SmartChem Autoanalyzer - Quadratic Calibration for Chloride and Sulfate

Step 1 - Retrieve Curve Data from Smartchem ICAL

A, B, C = constants from the ICAL quadratic regression

x = instrument response as absorbance or OD

y = concentration of analyte (mg/L)

Step 2: Calculate the instrument concentration, y

Where:

y = Ax^2 + Bx + C

Step 3: Solve for analyte concentration in sample, Cy

Cy = (y) (D)

Example Calculation (LCS):

Value of A from plot:	101.2796
Value of B from plot:	318.9056
Value of C from plot:	-2.2712
Absorbance of unknown from quantitation report (x):	0.1583
Calculated concentration (y):	50.7495108
Dilution factor (D):	1.00
Concentration of analyte in sample, Cy:	50.75 mg/L

2.2.3.2 QC Summary Data

Example Total Sulfide(Liquid) Calculations

[mL Iodine * N Iodide) - (mL titrant * N titrant)] * 16000/(volume * dilution) = mg/L Sulfide

where:

mL Iodine = mL of Iodine used
N Iodine = normality of Iodine
mL titrant = mL of titrant used
N titrant = normality of titrant
16000 = factor: 1mL of 0.025 N iodine reacts with 0.4mg sulfide
volume = mL filtered of mL titrated(if not filtered)
dilution = dilution in decimal form (1/5 = 0.2)

Example Total Sulfide(Soil) Calculations

[(mL Iodine * N Iodine) - (mL titrant * N titrant)] * 16.03/weight = mg/kg sulfide

where:

mL Iodine = mL of Iodine used
N Iodine = normality of Iodine
mL titrant = normality of titrant
16.03 = 32.06 grams per 2 equivalents
weight = kg of sample used

2.2.4.2 QC Summary Data

Total Organic Carbon Example Calculations
(Direct Readout Parameter)

(Readout)/(dilution) = mg/L

where:

Readout = direct readout from the instrument
dilution = dilution in decimal form (ex. 1/5 dilution = 0.2)

List of Valid Qualifiers
June 01, 2015

Qualkey: DOD

Qualifier	Description
*	Surrogate or spike compound out of range
+	Correlation coefficient for the MSA is less than 0.995
<	Result is less than the associated numerical value.
>	Greater than
A	See the report narrative
B	The reported result is associated with a contaminated method blank.
B,H1	Analyte present in method blank. Sample analysis performed past holding time.
B1	Target analyte detected in method blank at or above the method reporting limit
B3	Target analyte detected in calibration blank at or above the method reporting limit
B4	The BOD unseeded dilution water blank exceeded 0.2 mg/L
C	Confirmed by GC/MS
CG	Confluent growth
CT1	Cooler temperature at sample reciept exceeded regulatory limit.
DL	Surrogate or spike compound was diluted out
E	Estimated concentration due to sample matrix interference
EDL	Elevated sample reporting limits, presence of non-target analytes
EMPC	Estimated Maximum Possible Concentration
F, S	Estimated result below quantitation limit; method of standard additions(MSA)
F,CT1	Estimated value; the analyte concentration was less than the RL/LOQ. The cooler temperature at receipt exceeded regula
FL	Free Liquid
H1	Sample analysis performed past holding time.
H1,CT1	Sample analysis performed past holding time. The cooler temperature at receipt exceeded regulatory guidelines for reque
I	Semiquantitative result (out of instrument calibration range)
J	Estimated concentration; sample matrix interference.
J	Estimated value ; the analyte concentration was greater than the highest standard
J	Estimated value ; the analyte concentration was less than the LOQ.
J	The reported result is an estimated value.
J,B	Analyte detected in both the method blank and sample above the MDL.
J,CT1	Estimated value ; the analyte concentration was less than the LOQ. Cooler temperature at sample reciept exceeded regu
J,H1	Estimated value ; the analyte concentration was less than the LOQ. Sample analysis performed past holding time.
J,H1	The reported result is an estimated value. Sample was analyzed past holding time.
J,P	Estimate; columns don't agree to within 40%
J,S	Estimated concentration; analyzed by method of standard addition (MSA)
JB	The reported result is an estimated value. The reported result is also associated with a contaminated method blank.
JQ	The reported result is an estimated value and one or more quality control criteria failed. See narrative.
L	Sample reporting limits elevated due to matrix interference
L1	The associated blank spike (LCS) recovery was above the laboratory acceptance limits.
L2	The associated blank spike (LCS) recovery was below the laboratory acceptance limits.
M	Matrix effect; the concentration is an estimate due to matrix effect.
N	Nontarget analyte; the analyte is a tentativlely identified compound (TIC) by GC/MS
NA	Not applicable
ND	Not detected at or above the reporting limit (RL/MDL).
ND, B	Not detected at or above the reporting limit (RL). Analyte present in method blank.
ND, CT1	Analyte was not detected. The concentration is below the reported LOD. The cooler temperature at receipt exceeded reg
ND, L	Not detected; sample reporting limit (RL) elevated due to interference
ND, S	Not detected; analyzed by method of standard addition (MSA)
ND,H1	Not detected; Sample analysis performed past holding time.
ND,H1,CT1	Not detected; Sample analysis performed past holding time. The cooler temperature at receipt exceeded regulatory guide
NF	Not found by library search
NFL	No free liquid
NI	Non-ignitable
NR	Analyte is not required to be analyzed
NS	Not spiked
P	Concentrations >40% difference between the two GC columns
Q	One or more quality control criteria failed. See narrative.
Q,H1	One or more quality control criteria failed. Sample analyzed past holding time. See narrative.
QNS	Quantity of sample not sufficient to perform analysis
RA	Reanalysis confirms reported results
RE	Reanalysis confirms sample matrix interference
S	Analyzed by method of standard addition (MSA)
SMI	Sample matrix interference on surrogate
SP	Reported results are for spike compounds only
T5	Laboratory not licensed for this parameter
TIC	Library Search Compound
TNTC	Too numerous to count
TNTC, B	Too numerous to count. Analyte present in method blank.
TNTC,CT1	Too numerous to count. The cooler temperature at receipt exceeded regulatory guidelines for requested testing.

Microbac Laboratories Inc.
List of Valid Qualifiers
June 01, 2015

Qualkey: DOD

TNTC,H1	Too numerous to count. Sample analysis performed past holding time.
U	Analyte was not detected. The concentration is below the reported LOD.
U,CT1	Analyte was not detected. The concentration is below the reported LOD. Cooler temperature at sample reciept exceeded
U,H1	Not detected; Sample analysis performed past holding time.
UJ	Undetected; the MDL and RL are estimated due to quality control discrepancies.
UQ	Undetected; the analyte was analyzed for, but not detected.
W	Post-digestion spike for furnace AA out of control limits
X	Exceeds regulatory limit
X, S	Exceeds regulatory limit; method of standard additions (MSA)
Z	Cannot be resolved from isomer - see below

NELAP Addendum - May 26, 2015

Non-NELAP LIMS Product and Description

The following is a list of those tests that are not included in the Microbac – OVL NELAP Scope of Accreditation:

Heat of Combustion (BTU)
Total Halide by Bomb Combustion (TX)
Particle Sizing - 200 Mesh (PS200)
Specific Gravity/Density (SPGRAV)
Total Residual Chlorine (CL-TRL)
Total Volatile Solids (all forms) (TVS)
Total Coliform Bacteria (all methods)
Fecal Coliform Bacteria (all methods)
Sulfite (SO3)
Formate (HPLC-UV)
Propionaldehyde (HPLC-UV)
Fluoroborate (ISE)
n-Butane (RSK175)

SOLID AND HAZARDOUS CHEMICALS
Nitrogen, Ammonia by Method 350.1
Chromium, Hexavalent, Leachable by SM3500 Cr-B 2009
Phenolics, Total by Method 420.1

NELAP Accreditation by Laboratory SOP

NONPOTABLE WATER

OVL HPLC02/HPLC-UV

Nitroglycerin
Acetic acid
Butyric acid
Lactic acid
Propionic acid
Pyruvic acid

OVL MSS01/GC-MS

1,4-Phenylenediamine
1-Methylnaphthalene
1,4-Dioxane
Atrazine
Benzaldehyde
Biphenyl
Caprolactam
Hexamethylphosphoramide (HMPA)
Pentachlorobenzene
Pentachloroethane

NELAP Accreditation by Laboratory SOP

NONPOTABLE WATER

OVL MSV0I/GC-MS

1, 1, 2-Trichloro-1,2,2-trifluoroethane
1,3-Butadiene
Cyclohexane
Cyclohexanone
Dimethyl disulfide
Dimethylsulfide
Ethyl-t-butylether (ETBE)
Isoprene
Methylacetate
Methylcyclohexane
T-amylmethylether (TAME)
Tetrahydrofuran (THF)

OVL RSKOI/GC-FID

Acetylene
Propane

OVL HPLC07/HPLC-MS-MS

Hexamethylphosphoramide (XMPA-LCMS)

OVL HPLC12/HPLC/UV
Acetate

SOLID AND HAZARDOUS CHEMICALS

OVL MSS0I/GC-MS

1-Methylnaphthalene
Benzaldehyde
Biphenyl
Caprolactam
Pentachloroethane

NELAP Accreditation by Laboratory SOP

SOLID AND HAZARDOUS CHEMICALS

OVL MSV0I/GC-MS

1.3-Butadiene
Cyclohexane
Cyclohexanone
Dimethyl disulfide

Dimethylsulfide
Ethyl-t-butylether (ETBE)
Isoprene
Methylacetate
Methylcyclohexane
n-Hexane
T-amylmethylether (TAME)

APPENDIX E: MANN-KENDALL TREND TEST RESULTS

Mann-Kendall Trend Test - 67WW01

Mann-Kendall Trend Analysis

00740878

n	6
Confidence Coefficient	0.9500
Level of Significance	0.0500
Standard Deviation of S	5.3229
Standardized Value of S	2.2544
Test Value (S)	13
Tabulated p-value	0.0080
Approximate p-value	0.0121

OLS Regression Line (Blue)

OLS Regression Slope	0.6674
OLS Regression Intercept	-27,583.0491

Statistically significant evidence of an increasing trend at the specified level of significance.

Mann-Kendall Trend Test - 67WW01

Mann-Kendall Trend Analysis

n	6
Confidence Coefficient	0.9500
Level of Significance	0.0500
Standard Deviation of S	5.3229
Standardized Value of S	2.2544
Test Value (S)	13
Tabulated p-value	0.0080
Approximate p-value	0.0121

OLS Regression Line (Blue)

OLS Regression Slope	0.0344
OLS Regression Intercept	-1,421.5379

Statistically significant evidence of an increasing trend at the specified level of significance.

Mann-Kendall Trend Test - 67WW01

Mann-Kendall Trend Analysis

n	6
Confidence Coefficient	0.9500
Level of Significance	0.0500
Standard Deviation of S	5.3229
Standardized Value of S	1.1272
Test Value (S)	7
Tabulated p-value	0.1360
Approximate p-value	0.1298

OLS Regression Line (Blue)

OLS Regression Slope	0.0008
OLS Regression Intercept	-31.7443

Insufficient statistical evidence of a significant trend at the specified level of significance.

00740881

Mann-Kendall Trend Analysis

n	6
Confidence Coefficient	0.9500
Level of Significance	0.0500
Standard Deviation of S	5.3229
Standardized Value of S	0.0000
Test Value (S)	-1
Tabulated p-value	0.5000
Approximate p-value	0.5000

OLS Regression Line (Blue)

OLS Regression Slope	-0.0001
OLS Regression Intercept	5.8146

Insufficient statistical evidence of a significant trend at the specified level of significance.

Mann-Kendall Trend Test - 67WW02

Mann-Kendall Trend Analysis

00740882

n	8
Confidence Coefficient	0.9500
Level of Significance	0.0500
Standard Deviation of S	6.9761
Standardized Value of S	1.0034
Test Value (S)	8
Tabulated p-value	0.1190
Approximate p-value	0.1578

OLS Regression Line (Blue)

OLS Regression Slope	0.0111
OLS Regression Intercept	-462.5269

Insufficient statistical evidence of a significant trend at the specified level of significance.

Mann-Kendall Trend Test - 67WW02

Mann-Kendall Trend Analysis

00740883

n	8
Confidence Coefficient	0.9500
Level of Significance	0.0500
Standard Deviation of S	4.5826
Standardized Value of S	-1.3093
Test Value (S)	-7
Tabulated p-value	0.2740
Approximate p-value	0.0952

OLS Regression Line (Blue)

OLS Regression Slope	-0.0002
OLS Regression Intercept	9.3378

Insufficient statistical evidence of a significant trend at the specified level of significance.

Mann-Kendall Trend Test - 67WW02

Mann-Kendall Trend Analysis

00740884

n	8
Confidence Coefficient	0.9500
Level of Significance	0.0500
Standard Deviation of S	4.5826
Standardized Value of S	-1.3093
Test Value (S)	-7
Tabulated p-value	0.2740
Approximate p-value	0.0952

OLS Regression Line (Blue)

OLS Regression Slope	-0.0002
OLS Regression Intercept	9.3378

Insufficient statistical evidence of a significant trend at the specified level of significance.

Mann-Kendall Trend Test - 67WW02

Mann-Kendall Trend Analysis

00740885

n	8
Confidence Coefficient	0.9500
Level of Significance	0.0500
Standard Deviation of S	4.5826
Standardized Value of S	-1.3093
Test Value (S)	-7
Tabulated p-value	0.2740
Approximate p-value	0.0952

OLS Regression Line (Blue)

OLS Regression Slope	-0.0002
OLS Regression Intercept	9.3378

Insufficient statistical evidence of a significant trend at the specified level of significance.

Mann-Kendall Trend Test - 67WW08

Mann-Kendall Trend Analysis

n	8
Confidence Coefficient	0.9500
Level of Significance	0.0500
Standard Deviation of S	8.0829
Standardized Value of S	2.1032
Test Value (S)	18
Tabulated p-value	0.0160
Approximate p-value	0.0177

OLS Regression Line (Blue)

OLS Regression Slope	1.4397
OLS Regression Intercept	-58,592.6319

Statistically significant evidence of an increasing trend at the specified level of significance.

Mann-Kendall Trend Test - 67WW08

Mann-Kendall Trend Analysis

00740887

n	8
Confidence Coefficient	0.9500
Level of Significance	0.0500
Standard Deviation of S	8.0829
Standardized Value of S	1.1135
Test Value (S)	10
Tabulated p-value	0.1380
Approximate p-value	0.1328

OLS Regression Line (Blue)

OLS Regression Slope	0.0200
OLS Regression Intercept	-740.5388

Insufficient statistical evidence of a significant trend at the specified level of significance.

Mann-Kendall Trend Test - 67WW08

Mann-Kendall Trend Analysis

n	8
Confidence Coefficient	0.9500
Level of Significance	0.0500
Standard Deviation of S	8.0208
Standardized Value of S	0.4987
Test Value (S)	5
Tabulated p-value	0.3600
Approximate p-value	0.3090

OLS Regression Line (Blue)

OLS Regression Slope	0.0002
OLS Regression Intercept	-5.3016

Insufficient statistical evidence of a significant trend at the specified level of significance.

Mann-Kendall Trend Test - 67WW08

Mann-Kendall Trend Analysis

n	8
Confidence Coefficient	0.9500
Level of Significance	0.0500
Standard Deviation of S	4.5826
Standardized Value of S	1.3093
Test Value (S)	7
Tabulated p-value	0.2740
Approximate p-value	0.0952

OLS Regression Line (Blue)

OLS Regression Slope	0.0014
OLS Regression Intercept	-54.2967

Insufficient statistical evidence of a significant trend at the specified level of significance.

Mann-Kendall Trend Test - 67WW09

Mann-Kendall Trend Analysis

n	7
Confidence Coefficient	0.9500
Level of Significance	0.0500
Standard Deviation of S	6.6583
Standardized Value of S	-1.8023
Test Value (S)	-13
Tabulated p-value	0.0350
Approximate p-value	0.0358

OLS Regression Line (Blue)

OLS Regression Slope	-0.0195
OLS Regression Intercept	829.2111

Statistically significant evidence of a decreasing trend at the specified level of significance.

Mann-Kendall Trend Test - 67WW09

Mann-Kendall Trend Analysis

00740891

n	7
Confidence Coefficient	0.9500
Level of Significance	0.0500
Standard Deviation of S	5.9722
Standardized Value of S	1.3395
Test Value (S)	9
Tabulated p-value	0.1190
Approximate p-value	0.0902

OLS Regression Line (Blue)

OLS Regression Slope	0.0037
OLS Regression Intercept	-153.9704

Insufficient statistical evidence of a significant trend at the specified level of significance.

Mann-Kendall Trend Test - 67WW09

Mann-Kendall Trend Analysis

n	7
Confidence Coefficient	0.9500
Level of Significance	0.0500
Standard Deviation of S	5.2599
Standardized Value of S	1.5209
Test Value (S)	9
Tabulated p-value	0.1190
Approximate p-value	0.0641

OLS Regression Line (Blue)

OLS Regression Slope	0.0031
OLS Regression Intercept	-127.9784

Insufficient statistical evidence of a significant trend at the specified level of significance.

Mann-Kendall Trend Test - 67WW09

Mann-Kendall Trend Analysis

05/19/15	177.37	522	31
Correlation		-32%	21%

Notes:
Correlation calculated using Microsoft Excel correlation function.
Average used for two samples when field duplicate sample collected.
Analytical results are in micrograms per liter (µg/L).
ft MSL - feet above mean sea level

Subject: **Final Minutes, Monthly Managers' Meeting, Longhorn Army Ammunition Plant (LHAAP)**

Location of Meeting: **Teleconference – 844-712-3247, Passcode 32317675**
Date of Meeting: **February 23, 2017 – 10:00 AM**

Attendees:

Army BRAC:	Rose Zeiler (RMZ)
EPA:	Rich Mayer (RM), Kent Becher (KB) (USGS Liaison), Barry Forsythe (BF), Dorelle Harrison (DH)
TCEQ:	April Palmie (AP)
USACE:	Aaron Williams (AW)
AECOM:	Debra Richmann (DR), Elspeth Sharp (ES), Craig Holloway (CH), JoLynn Snow (JS)
USFWS:	Paul Bruckwicki (PB)

Welcome **RMZ**

Action Items

AECOM

- Complete arrangements for removal and disposal of a roll-off box containing IDW at LHAAP-67. **Complete** – All roll offs containing IDW from LHAAP-67 (and LHAAP-37 and -18/24) were picked up and transported to the landfill on 2/16/17.
- Management of irrigation with treated GWTP effluent. **In Progress.** RMZ and AW are going to discuss further with Army team.
- Update on GWTP operations. **In Progress** - Summary of activities and progress:
    - CH discussed that the GWTP is continuing to recirculate. Approximately 14,000 gallons have been disposed of offsite, giving more room in the frac tanks to add fresh water and circulate, and enabling some extraction of groundwater. CH also discussed ORP and pH levels, which are indicator parameters. CH stated that a sample was taken yesterday (February 22) and if perchlorate levels are below 13 µg/L, discharging to Harrison Bayou will begin. If not, AECOM will continue the current process of disposing of water off site until results get to that level. There is currently flow in Harrison Bayou.
    - RM asked which ICTs were being turned on. CH said they have rotated which ICTs were extracting. ICTs in the NW corner were extracting on Monday (February 20) and Wednesday (February 22); ICTs from the NE side were extracting on February 21.
    - RM asked what the level of perchlorate was in the water that was shipped off site. RMZ and CH said it was approximately 5000 µg/L.
    - CH said there will be variations up and down from day to day for pH and ORP, but the trend is down for ORP and up for pH, and they are expected to eventually stabilize.
- PB asked about the status of the power supply switch over. He stated SWEPCO wanted to put a pole over or near a water line. During the switch over, power will be shut down. CH

confirmed this and stated this will be okay for the GWTP. CH stated SWEPCO has put this project "into construction" and will be installing three new power poles and a new meter. Then Arklatex will be doing their part of the task. CH believes the power outage will be approximately 3 to 4 hours.

Army

- Surface water and perimeter well sampling requirements were from the December 1999 Dispute Resolution Decision. There is agreement to discontinue perimeter well sampling. **Complete.**

EPA

- RM stated that EPA has funds he wants to use to perform some sampling. RMZ asked what wells EPA is planning on sampling. RM said he would send RMZ that list.

TCEQ

- No outstanding action items.

AEC

- No outstanding action items.

USFWS

- No outstanding action items.

Schedule Review **RMZ**

- Restoration
- Contract - AW said GFI will be needed by the end of March so the Year 3 RA-O reports for LHAAP-46 and LHAAP-67 and the Geochemical Rebound Tech Memo for LHAAP-37 should be going to TCEQ and EPA soon. RMZ asked for an expedited review from TCEQ and EPA.

Programmatic Issues **RMZ/RM/AP**

- RM discussed that the LHAAP-04 ROD is with the Division Director. RM indicated the delay is related to there being a new EPA administration. Many CERCLA sites are being held up. It is unknown if the LHAAP-04 ROD is on the schedule for FY17.

Defense Environmental Restoration Program (DERP) PBR Update **AECOM**

DR asked everyone to refer to the Document and Issue Tracker dated 2/23/17, which was distributed with the agenda. It includes currently projected dates for submittal of remaining project milestone deliverables to EPA and TCEQ.

- Item 1 (GWTP Quarterly Report) – DR said the draft GWTP report for Q2 2016 is currently in preparation and will incorporate responses to agency comments on the Q1 2016 report in a separate section of the report. Submittal to EPA and TCEQ is planned for the week of 3/6/17.

- The following items are complete and not discussed:

- Item 2 – Supplemental to Updated LHAAP-18/24 PSI Addendum
- Item 2-1- LHAAP-18/24 Data Gap Sampling
- Item 2-2 - Previous Regulatory Comments on LHAAP-18/24 FS
- Item 2-3 - LHAAP-18/24 Revised FS
- Item 3-1 - LHAAP-37 RACR
- Item 4 - LHAAP-46 RACR
- Item 5 - LHAAP-50 RACR
- Item 6 - LHAAP-58 RACR
- Item 7 - LHAAP-67 RACR
- Item 8 - LHAAP-12 2015 Annual Report

- Item 8-1 (LHAAP-12 2016 RA-O Report) – DR said the validated data for groundwater samples collected in December 2016 were provided to EPA and TCEQ on 2/23/17 in the January 2017 Data Validation Package attachment to the February 2017 MMM agenda.

- Item 9 (LHAAP-46 Yr. 1 and Yr. 2 RA-O Reports) is complete, so was not discussed.

- Item 9-1 (LHAAP-46 Yr. 3 RA-O Report) – The draft report is planned for submittal to TCEQ and EPA for review the week of 3/6/17.

- Item 10-1 (LHAAP-67 Yr. 1 RA-O Report) and Item 10-2 (LHAAP-67 Yr. 2. RA-O Report) are complete, so were not discussed.

- Item 10-3 (LHAAP-67 Yr. 3 RA-O Report) – The draft report is planned for submittal to TCEQ and EPA for review the week of 2/27/17.

- Item 11-1 (LHAAP-50 Yr. 1 RA-O Report) is complete, so was not discussed.

- Item 11-2 (LHAAP-50 Yr. 2 RA-O Report) – Revised Figure 2-10 using the most recent set of Year 2 RA-O sampling results was sent to EPA and TCEQ on 1/30/17. TCEQ accepted the revised figure, RTCs and Draft Final report on 1/31/17.

- Item 12-1 (LHAAP-58 Yr. 1 and Yr. 2 RA-O Reports) are complete, so were not discussed.

- Item 12-2 (LHAAP-58 Contingency Remedial Action Work Plan) is complete, so was not discussed.

- Item 13 (MMM) – Draft minutes from the January 2017 MMM planned for submittal to EPA and TCEQ by 2/24/17. The next MMM meeting will be held at 10:00 CST on Tuesday 3/28/17 by teleconference.

- Item 14-1 (LHAAP-29 RI Addendum) is complete, so was not discussed.

- Item 14-2 (LHAAP-29 FS Addendum) – DR said a determination of whether the draft FS addendum will be submitted to the regulators under the current PBR contract is pending a decision from the Army.

- Item 15-1 (LHAAP-47 PSI Work Plan) is complete, so was not discussed.
- Item 15-2 (LHAAP-16 RD) is complete, so was not discussed.
- Item 15-2a (LHAAP-16 RD Post ROD Requirements) is complete, so was not discussed.
- Items 15-3 (LHAAP-17 RD) – The Army is deferring the RD to the next PBR contract.
- Item 15-3a (LHAAP-17 PDI WP) is complete, so was not discussed.
- Item 15-3b (LHAAP-17 Post-ROD Requirements) is complete, so was not discussed.
- Item 15-4 (LHAAP-001-R-01 RD/RDWP) – The Army is deferring the LUC RD to the follow-on PBR contract, so this item was not discussed.
- Item 15-4a (LHAAP-001-R-01 Limited LTM) and Item 15-4b (LHAAP-001-R-01 Post-ROD Requirements) are complete, so were not discussed.
- Item 15-5 (LHAAP-003-R-01 RD/RDWP) – The Army is deferring the LUC RD to the follow-on PBR contract, so this item was not discussed.
- Item 15-5a (LHAAP-003-R-01 Limited LTM) – Submitted Draft Tech Memo to EPA and TCEQ on 2/8/17. Received EPA approval on 2/22/17.
- Item 15-5b (LHAAP-003-R-01 Post-ROD Requirements) is complete, so was not discussed.
- Item 15-6 (LHAAP-04 ROD) – The ROD is with EPA for signature. A preliminary public notice will be published after the ROD is signed.
- Item 15-7 (Site-wide LUC Management Plan) – The FY2016 Revision Log and signed transmittal letters will be entered into the next Admin Record update.
- Item 16 (RAB/Website) – Submitted Draft January 2017 RAB meeting minutes to EPA and TCEQ on 2/9/17. Received TCEQ concurrence on Draft January 2017 RAB meeting minutes on 2/13/17. Received EPA concurrence on Draft January 2017 RAB meeting minutes on 2/14/17. The next RAB meeting will be a site tour on 4/27/17 at 5:00 PM CST. RMZ received an email from Rick Lowerre stating George Rice would like to address the RAB at the next meeting. When informed a tour is scheduled instead of a meeting, said he would get back to Army if it will be during the tour or earlier at the community center.
- Item 17-1 (GWTP O&M – GWTP Sampling and Optimization Memo) is complete so was not discussed.
- Item 17-2 (GWTP Sampling and Analysis Plan) – is complete so was not discussed.
- Item 17-3 (GWTP Continuing O&M) – discussed earlier under AECOM Action Items.
    - CH stated that he is working on getting back to the regular sampling schedule.

- RMZ asked CH to send the graph of the pH and ORP levels to date and the list of ICTs pumped to AP and RM.

- Item 18 (Admin. Record Update) – The Q3 2016 AR update was uploaded to the LHAAP website on 12/14/16, and CDs were sent later in the week. The 2016 AR Q4 update is currently in preparation. JS said the quarterly GWTP evaluation reports are still being uploaded.

- Item 19 (LHAAP-02) is complete so was not discussed.

- Item 20 (LHAAP-37 Geochemical Rebound) – Submittal of the Draft Tech Memo to EPA and TCEQ is planned for the week of 3/6/17.

- Item 21 (Smart Map) – AECOM continues to develop the Smart Map, which will be transferred to Army at the end of the month.

- Upcoming/ongoing field work: No sampling scheduled.

- Monthly data – See attached January 2017 Validated LHAAP Data. RM noted that 18WW08 perchlorate results are high and are outside of the containment area. RMZ stated it will be closely looked at.

- Groundwater Treatment Plant Operations – Discussed earlier in meeting.

MMRP Update **Army**

- RMZ, AW, and PB discussed the possibility of transferring LHAAP-001-R and LHAAP-003-R. PB agreed that they could proceed with the transfer of LHAAP-003-R. PB and RMZ agreed that LHAAP-001-R will need to wait until more sampling is completed. RM agreed.

Other Environmental Restoration **Army**

- Quarterly Reporting and Requirements
  - GWTP Evaluation
  - Surface Water/Perimeter Well Quarterly Update
  - Administrative Record Update
  - Website Update
- Annual Reporting
  - LUC Management Plan Update - Signed Revision Log and transmittal letters will be entered into the 2016 Q4 AR update. RMZ asked PB if he had received her email. PB confirmed. PB has LUC Management Plan from 2007.
  - PB said RM had asked him what the total acreage of the transferred property is. RMZ said the transferred property is 7114.75 acres.
- CRP/CIP Revision (Biennial)
  - RM said Janetta Coats asked him for the current CRP and said he would send what he has to RMZ to make sure he has the most current version. RMZ said the most current version is 2013. Army is waiting to have the ROD for LHAAP-04 signed before updating the CRP. Army knows the ROD dates need to be updated in the CRP.

USFWS Update
PB stated there was a controlled burn of 2,200 acres. The area included LHAAP-29. RMZ/PB

PB asked RM about a person wanting to film within the LHAAP area. RM said they should be contacting RMZ and he gave the caller the Army's contact information. RMZ said she had not been contacted by anyone regarding filming at LHAAP.

Schedule Next Managers' Meeting

- March 2017 MMM will be held by teleconference, 3/28/17 at 10:00 CST.

Other Issues

- RMZ and AW discussed the PWS.
- AW said he is going through Army comments on the PWS. He said the GFI is needed by the end of March. AW, RM, and AP discussed the possibility of an expedited review of the outstanding deliverables. AW said he will get a cut-off date to TCEQ and EPA.

Adjourn

Attachments:

- **January 2017 Validated LHAAP Data:**
  - GWTP Effluent: Weekly and Monthly Sampling (December 2016)
  - GWTP Influent: Monthly (December 2016)
  - LHAAP-12: Annual MNA Sampling (December 2016)
  - LHAAP-18/24: Semi-Annual Sampling (December 2016
  - PER: Perimeter Well Sampling (December 2016)

January 2017

GWTP Effluent *Weekly, and Monthly Sampling - December 2016*

Ammonia (350.1)
Ortho-Phosphate (365.2)
Organic Carbon (415.1)
Perchlorate (6850)
1,4-Dioxane (8270D-SIM)
Metals (6010C)
Metals (6020A)

GWTP Influent *Monthly - December 2016*

Perchlorate (6850)
VOC (8260B)

LHAAP-12 *Annual MNA Sampling - December 2016*

Metals (6010C)

LHAAP-18/24 *Semi-Annual Sampling - December 2016*

Metals (6010C)
Metals (6020A)
Perchlorate (6850)
Mercury (7470A)
VOC (8260B)

PER *Perimeter Well Sampling - December 2016*

Perchlorate (6850)

GWTP Effluent Weekly Sampling - December 2016

Location ID: Sample Date:	Units	Daily Maximum Conc	LH18/24-SP650-6415-GRAB 12/5/2016
Location Description:			GWTP–Collected from a spigot on the discharge of effluent TK-650. Sampled Weekly.
Ammonia as N (350.1)			
AMMONIA AS N	mg/L		13.5
Ortho-Phosphate (365.2)			
ORTHO-PHOSPHATE	mg/L		3.01
Organic Carbon (415.1)			
TOTAL ORGANIC CARBON (TOC)	mg/L		80.9
Perchlorate (6850)			
PERCHLORATE	ug/L	13	<0.2 U
Semi-Volatile Organic Compounds (8270D-SIM)			
1,4-DIOXANE*	ug/L	134.2	25.6

No GWTP Effluent samples collected due to process upset on 12/12/16.

* Calculated Effluent Limit

mg/L - milligrams per liter

U - Undetected: The analyte was analyzed for, but not detected.

ug/L - micrograms per liter

GWTP Effluent Monthly Sampling - December 2016

Location ID: Sample Date:	Units	Daily Maximum Conc	LH18/24-SP650-6414-GRAB 12/5/2016
Location Description:			GWTP – Collected from a spigot on the discharge of effluent TK-650. Sampled Monthly.
Metals (6010C)			
ALUMINUM	mg/L	1.644	<0.2 U
IRON	mg/L	2.395	0.252
SELENIUM	mg/L	0.012	<0.02 U
Metals (6020A)			
ANTIMONY	mg/L		0.000504 J
ARSENIC	mg/L	0.722	0.00262
BARIUM	mg/L	2	0.158
CADMIUM	mg/L	0.0034	0.000301 J
CHROMIUM	mg/L	0.752	0.0106
COBALT	mg/L	11.495	0.00678
LEAD	mg/L	0.0046	<0.001 U
MANGANESE	mg/L	15.494	0.0392
NICKEL	mg/L	0.184	0.0209
SILVER	mg/L	0.003	<0.001 U
THALLIUM	mg/L		0.00104
VANADIUM	mg/L	3.592	0.00166 J
ZINC	mg/L	0.31	0.111

J - Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.

mg/L - milligrams per liter

U - Undetected: The analyte was analyzed for, but not detected.

GWTP Influent Monthly Sampling - December 2016

Location ID: / Sample Date:	Units	LH18/24-SP140-7414-GRAB 12/5/2016
Location Description:		GWTP – Collected from a spigot on the influent to TK-140. Sampled Monthly.
Perchlorate (6850)		
PERCHLORATE	ug/L	14200
8260B

Blue highlighting indicates concentrations above the MCL/PCL

J - Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.

MCL - Maximum Contaminant Level

PCL – Texas Risk Reduction Program (TRRP) Tier 1 Groundwater Residential Protective Concentration Level

U - Undetected: The analyte was analyzed for, but not detected.

UJ - The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

ug/L - micrograms per liter

Location IDs containing "F" indicate sample filtered in the field with 10 micron filter.

Location IDs containing "FD" indicate duplicate samples.

Blue Highlighting Indicates Analyte Detected Above MCL/PCL

Note: Some samples may have been diluted due to the concentration(s) of one or more analytes exceeding the upper limit of the calibration curve.

J - Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.

MCL - Maximum Contaminant Level

mg/L - milligrams per liter

NA - not analyzed

PCL – Texas Risk Reduction Program (TRRP) Tier 1 Groundwater Residential Protective Concentration Level

U - Undetected: The analyte was analyzed for, but not detected.

UJ - The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

ug/L - micrograms per liter

Location IDs containing "F" indicate sample filtered in the field with 10 micron filter.

Location IDs containing "FD" indicate duplicate samples.

Blue Highlighting Indicates Analyte Detected Above MCL/PCL

Note: Some samples may have been diluted due to the concentration(s) of one or more analytes exceeding the upper limit of the calibration curve.

J - Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.

MCL - Maximum Contaminant Level

mg/L - milligrams per liter

NA - not analyzed

PCL – Texas Risk Reduction Program (TRRP) Tier 1 Groundwater Residential Protective Concentration Level

U - Undetected: The analyte was analyzed for, but not detected.

UJ - The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

ug/L - micrograms per liter

Location IDs containing "F" indicate sample filtered in the field with 10 micron filter.

Location IDs containing "FD" indicate duplicate samples.

Blue Highlighting Indicates Analyte Detected Above MCL/PCL

Note: Some samples may have been diluted due to the concentration(s) of one or more analytes exceeding the upper limit of the calibration curve.

J - Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.

MCL - Maximum Contaminant Level

mg/L - milligrams per liter

NA - not analyzed

PCL – Texas Risk Reduction Program (TRRP) Tier 1 Groundwater Residential Protective Concentration Level

U - Undetected: The analyte was analyzed for, but not detected.

UJ - The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

ug/L - micrograms per liter

Location IDs containing "F" indicate sample filtered in the field with 10 micron filter.

Location IDs containing "FD" indicate duplicate samples.

Blue Highlighting Indicates Analyte Detected Above MCL/PCL

Note: Some samples may have been diluted due to the concentration(s) of one or more analytes exceeding the upper limit of the calibration curve.

J - Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.

MCL - Maximum Contaminant Level

mg/L - milligrams per liter

NA - not analyzed

PCL – Texas Risk Reduction Program (TRRP) Tier 1 Groundwater Residential Protective Concentration Level

U - Undetected: The analyte was analyzed for, but not detected.

UJ - The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

ug/L - micrograms per liter

Location IDs containing "F" indicate sample filtered in the field with 10 micron filter.

Location IDs containing "FD" indicate duplicate samples.

Blue Highlighting Indicates Analyte Detected Above MCL/PCL

Note: Some samples may have been diluted due to the concentration(s) of one or more analytes exceeding the upper limit of the calibration curve.

J - Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.

MCL - Maximum Contaminant Level

mg/L - milligrams per liter

NA - not analyzed

PCL – Texas Risk Reduction Program (TRRP) Tier 1 Groundwater Residential Protective Concentration Level

U - Undetected: The analyte was analyzed for, but not detected.

UJ - The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

ug/L - micrograms per liter

Re: Technical Memorandum for Groundwater Geochemistry Rebound Evaluation for LHAAP-35B (37) at Longhorn Army Ammunition Plant, Karnack, Texas

Dear Mr. Mayer,

The above-referenced document is being transmitted to you for review. In accordance with the Federal Facilities Agreement for Longhorn, review comments are requested by March 30, 2017.

The document was prepared by AECOM on behalf of the Army as part of AECOM's Performance Based Remediation contract for the facility. I ask that Debra Richmann, AECOM's Project Manager, be copied on any communications related to the project.

The point of contact for this action is the undersigned. I may be contacted at 479-635-0110, or by email at rose.m.zeiler.civ@mail.mil.

Sincerely,

Rose M. Zeiler, Ph.D.
Longhorn AAP Site Manager

MEMORANDUM FOR RECORD

February 28, 2017

SUBJECT: Groundwater Geochemistry Rebound Evaluation for LHAAP-35B (37) at Longhorn Army Ammunition Plant, Karnack, Texas

Introduction

This memorandum presents an updated assessment of progress toward restoration of LHAAP-35B (37) groundwater geochemistry to conditions similar to those existing prior to the Bio plug study conducted between October 2012 and October 2014. The purpose of this assessment is to determine whether the aquifer has rebounded to its pre-Bio plug study condition. Nine monitoring wells at LHAAP-35B (37) that are screened in the Shallow Zone (35BWW04, 35BWW05, 35BWW06, 35BWW07, 35BWW08, 35BWW09, 35BWW11, 35BWW14, and LHSMW58) and one well that is screened in the Intermediate Zone (35BWW03) were sampled in February 2012 and July 2012 by Cherokee CRC, LLC (CCRC), and the U.S. Army Aberdeen Testing Center (ATC), respectively, before beginning the Bio plug study. These wells and three additional monitoring wells at the site (35BWW01, 35BWW12, and 35BWW13) were sampled after termination of the Bio plug study, in October 2015, December 2015, February 2016, and most recently in August 2016 by AECOM Technical Services, Inc., (AECOM) as part of the aquifer rebound evaluation presented in this memo. Geochemical data are available for a subset of wells from 2006. Figure 1 is a site map showing monitoring well locations, the extent of the May 2013 (baseline) VOC groundwater plumes, and the location of the Bio plug study (AECOM, 2016).

Groundwater Sampling Data Comparison

The pre-Bio plug study and post-Bio plug study groundwater geochemical sample results for pH, oxidation reduction potential (ORP), dissolved oxygen (DO), and conductivity from nine monitoring wells in the Shallow Zone (35BWW04, 35BWW05, 35BWW06, 35BWW07, 35BWW08, 35BWW09, 35BWW11, 35BWW14, and LHSMW58) and one monitoring well (35BWW03) in the Intermediate Zone were compared to evaluate aquifer rebound. Results from three additional Shallow Zone wells (35BWW01, 35BWW12, and 35BWW13) were also considered in assessing the overall rebound conditions. However, 2012 pre-Bio plug study geochemical data were not collected from these wells, except for 2006 geochemical data for 35BWW01. Results for other geochemical parameters that were measured during the rebound period were also considered. These parameters include total iron, ferrous (reduced) iron, nitrate, and sulfate. When field duplicates were analyzed, parameter-specific results for each pair of standard and duplicate samples were averaged. **Table 1** provides a summary of the February 2012 and July 2012 pre-Bio plug study data collected by CCRC/ATC and the post-Bio plug

study results collected by AECOM from October 2015 through August 2016. Available 2006 geochemical results are also included in Table 1. **Appendix A** provides the February 2012 field sampling forms generated by CCRC. **Appendix B** provides the July 2012 sampling data collected by ATC. **Appendix C** provides the October 2015, December 2015, February 2016, and August 2016 Quality Control Summary Reports and laboratory reports for samples collected by AECOM.

Geochemical Data Analysis

Non-parametric Wilcoxon rank sum (WRS) tests for independent data sets with equal variances, sometimes referred to as Mann Whitney U-tests, were used to compare the combined pre-Bio plug study and combined post-Bio plug study groundwater geochemistry rebound data for all wells sampled during each period. WRS was determined to be an appropriate method for statistical analysis of the data because it does not require similar sample sizes. F-tests were performed to ensure data sets being compared had equal variance. No comparisons violated the equal variance requirement. Accordingly, Z-statistic values were determined for an alpha value (level of significance) of 0.05. These were compared to Z-critical value(s) obtained from equations provided in Gilbert (1987) for the WRS test. One-tailed tests were used to determine if there is a significant difference between the pre-Bio plug study and post-Bio plug study rebound data sets for pH, ORP, and DO. The WRS test is based on the following hypotheses:

- Null hypothesis or H_0: The populations from which the two data sets have been drawn have the same mean.
- Alternative hypothesis or H_A: The populations have different means.

Results

pH

pH levels in the nine Shallow Zone monitoring wells and the one Intermediate Zone well sampled in 2012 before the Bio plug study ranged from 4.28 to 8.01. Post-Bio plug study pH levels for these same wells ranged from 3.30 to 8.97. The combined post-Bio plug study pH measurements collected from Shallow Zone monitoring wells and the Intermediate Zone well from October 2015 through August 2016 are not statistically significantly different from those in the pre-Bio plug study samples collected from February 2012 through July 2012, although the range of post-Bio plug study pH values is somewhat larger (**Appendix D**).

Figure 2 shows pH levels for individual wells during both the pre- and post-Bio plug study sampling events. **Figure 3** provides combined 2012 pre- and post-Bio plug study pH results. The wells have a wide range of pH values, both before and after the Bio plug study. Generally, pH appears to be decreasing and trending away from pre-Bio plug conditions (35BWW03,

35BWW05, 35WW06, 35BWW07, 35BWW08, 35BWW09, 35BWW11, and 35BWW14), but there is no significant difference in the pre- and post-Bio plug population means.

Oxidation Reduction Potential

ORP in the nine Shallow Zone monitoring wells and the one Intermediate Zone well in February 2012 and July 2012, before the Bio plug study, ranged between -145 and 251 millivolts (mV). Rebound ORP data for these wells after the Bio plug study ranged between -74 and 496 mV. The combined ORP values of the wells between October 2015 and August 2016 are significantly greater than the combined ORP values of the wells between February 2012 and July 2012 (**Appendix D**). ORP measurements from August and December 2006 are available for shallow monitoring wells 35BWW01 and LHSMW58, intermediate zone well 35BWW03, and composite upper and lower shallow well LHSMW59. December 2006 ORP measurements also available for shallow monitoring wells 35BWW04 and 35BWW05 and lower shallow well 35BWW06. 2006 ORP measurements ranged from 14.4 mV to 560 mV and are provided in Table 1 (Shaw, 2007).

ORP data are shown on **Figure 4**. **Figure 5** provides combined 2012 pre- and post-Bio plug study ORP values. The combined ORP data graph shows that the monitoring wells have a wide range of ORP values both pre- and post-Bio plug study. Post-Bio plug study ORP levels for monitoring wells 35BWW03 and LHSMW58 are within range of pre-Bio plug study levels from 2006 and 2012. Monitoring wells 35BWW04, 35BWW05, 35BWW06, and 35BWW08, located within the Bio plug study area, show generally increasing ORP concentrations. However, a similar pattern of increasing ORP measurements is observed in well 35BWW11 which is located outside of and cross-gradient to the Bio plug study area, indicating increasing ORP trends may not be related to the Bio plug study.

Dissolved Oxygen

DO levels in the nine Shallow Zone monitoring wells and the one Intermediate Zone well sampled in 2012 before the Bio plug study ranged between 0.89 and 6.97 milligrams per liter (mg/L). Post-Bio plug rebound DO results for these wells ranged between 0 and 6.41 mg/L. The combined DO levels in groundwater samples collected from the Shallow Zone monitoring wells and the Intermediate Zone well between October 2015 and August 2016 are not significantly different from DO levels in samples collected between February 2012 and July 2012 (**Appendix D**).

DO data are shown on **Figure 6**. DO measurements for wells 35BWW05 and 35BWW06 after termination of the Bio plug study suggest that DO levels in these wells are increasing over time, but remain low. DO data collected from Shallow Zone wells 35BWW05, 35BWW06, 35BWW08 and 35BWW09 appear to indicate stabilization, with DO values for these wells within a range consistently similar to pre-Bio plug conditions. Along with the apparent potential stabilization of DO levels in Shallow Zone wells 35BWW12 and 35BWW13, for which there are

no pre-Bio plug DO data, and in Shallow Zone well LHSMW58, this may suggest DO has returned to levels similar to those existing before the Bio plug study and supports aquifer rebound.

It is noted that only one pre-Bio plug study DO data point is available for some wells (35BWW05, 35BWW06, 35BWW08, 35BWW09, 35BWW11, and 35BWW14), which limits the understanding of pre-Bio plug conditions in comparison to post-Bio plug conditions.

Figure 7 provides combined 2012 pre- and post-Bio plug study DO values, which show that the monitoring wells have a wide range of DO values both pre- and post-Bio plug study; however, the graph also indicates that DO appears to be stabilizing throughout the aquifer, with the post-Bio plug data showing slightly less spread than the data collected before the Bio plug study. DO levels also appear to be lower in general than before the Bio plug study, though the statistics do not support a significant difference in the pre- and post-Bio plug population means.

Overall, DO levels appear to contradict the ORP measurements that show an increasing trend. It is noted that ORP measurements are often not as reliable as DO measurements.

Conductivity

Conductivity in the nine Shallow Zone monitoring wells and the one Intermediate Zone well sampled in 2012 before the Bio plug study ranged between 0.327 and 1.69 millisiemens per centimeter (mS/cm). Rebound conductivity data for these wells ranged between 0.111 and 1.24 mS/cm. Conductivity does not relate to aquifer rebound from pre-Bio plug conditions; therefore, pre- and post-Bio plug data were not statistically compared. However, combined 2012 pre- and post-Bio plug study conductivity values are presented in **Figure 8**. The figure in general indicates less spread and smaller median of conductivity results after the Bio plug study was concluded than before it was implemented.

Other Geochemical Parameters Influencing Aquifer Stabilization

Post-study concentrations of iron and manganese were analyzed in the past; however, these two geochemical parameters were not analyzed as part of the August 2016 sampling since no appreciable increase was noted in their concentrations prior to the August 2016 event. Total iron and manganese were historically analyzed when the sample turbidity was less than 10 nephelometric turbidity units (NTUs); however, filtered iron and manganese were analyzed when the sample turbidity was > 10 NTU. The presence of iron and manganese in unfiltered samples is typically associated with turbidity and suspended particulate matter. The presence of iron and manganese in filtered samples indicates a dissolved fraction and implies the presence of reducing conditions, as iron and manganese have higher solubility under reducing conditions than under oxidizing conditions. Therefore, concentrations of dissolved iron and manganese were expected to increase as the aquifer conditions progress toward their natural states after termination of the Bio plug study. Post-Bio plug concentrations of iron and manganese (not differentiating between

total and dissolved fractions) had increased in four wells (35BWW04, 35BWW05, 35BWW06, and LHSMW58) through February 2016; however, iron and/or manganese concentrations in most wells did not show an appreciable change or increase, an indication that aquifer conditions had not rebounded to pre-Bio plug study conditions at that time.

Several additional geochemical parameters were analyzed in the laboratory during post-Bio plug groundwater sampling, including nitrate, sulfate, and ferrous iron. These parameters were not collected prior to the Bio plug study in 2012; however, results for these parameters are available from August 2006 and December 2006 for wells 35BWW01, 35BWW03, LHSMW58 and LHSMW59 and from December 2006 for 32BWW04, 35BWW05, and 35BWW06.

Post Bio-plug study nitrate concentrations ranged between < 0.2 mg/L and 3.07 mg/L. Nitrate was not detected in the majority of the wells. Well LHSMW58 consistently had the highest nitrate concentration ranging from 1.05 mg/L in February 2016 to 3.07 mg/L in December 2015, followed by well 35BWW13, with detected nitrate concentrations ranging from 2.07 mg/L in December 2015 to 3.07 mg/L in October 2015. Most of the other wells had low to non-detectable levels of nitrate, which could potentially indicate stabilization of aquifer geochemistry and is consistent with 2006 mostly non-detect results (Table 1). Nitrate concentrations decreased steadily in wells 35BWW08 and LHSMW58 based on October 2015 through February 2016 results, which could indicate departure from the oxidative conditions of the aquifer attributable to Bio plug treatment.

Post Bio-plug sulfate concentrations ranged between 3.43 and 172 mg/L. The highest sulfate concentration was reported in well 35BWW06, ranging between 142 mg/L in February 2016 and 172 mg/L in December 2015; the December 2006 sulfate concentration was 235 mg/L. The second highest post Bio-plug sulfate concentration was reported in well 35BWW09, ranging between 148 mg/L in October 2015 and 165 mg/L in February 2016. Sulfate concentrations in well 35BWW09 were increasing slightly based on October 2015 through February 2016 data, indicating that oxidative conditions remained in the aquifer and rebound effects were not significant at that time; however 35BWW09 was located outside of the Bio plug study area. A steady decrease in sulfate concentration was observed in wells 35BWW04, 35BWW11, and LHSMW58 based on October 2015 through February 2016 data and in well 35BWW08 between October 2015 and August 2016. The decreasing trend in sulfate concentration in well 35BWW04 is no longer apparent when taking into account sulfate data collected in August 2016; rather, it appears that sulfate concentrations are potentially stabilizing in the well. August 2016 sulfate data was not collected for wells 35BWW09, 35BWW11, or LHSMW58, so there is no means of confirming at the present time whether the noted trends continued in those wells after February 2016. Potential stabilization of sulfate concentrations in wells 35BWW04 and 35BWW12 are indicated by the data, suggest potential aquifer stabilization in localized areas. However, this response is not widespread, as steady sulfate concentration decreases were noted in some of the aforementioned wells, and steady increases were observed in other wells such as

35BWW05, 35BWW09, and 35BWW13 through February 2016 and well 35BWW14 through August 2016.

Post- Bio plug study ferrous iron concentrations, a potential indicator of aquifer reducing conditions, ranged between < 0.04 mg/L and 6.55 mg/L. The highest ferrous iron concentration occurred in well 35BWW06 at 6.55 mg/L in February 2016. Ferrous iron in well 35BWW06 increased from < 0.04 mg/L in October and December 2015 to 6.55 mg/L in February 2016, indicating a likely shift toward more reducing conditions in the aquifer since the increase in ferrous iron in well 35BWW06 in February 2016 coincided with a slight decrease in sulfate concentration (and thus general increase in sulfide concentration) from 172 mg/L in December 2015 to 146 mg/L in February 2016. The second highest ferrous iron concentration was observed in well 35BWW05, with concentrations slightly increasing from 0.379 mg/L in October 2015 to 0.559 mg/L in February 2016, again supporting a shift in aquifer conditions which favors iron reduction since the slight increase in ferrous iron was accompanied by a slight increase in sulfate and nitrate concentrations and thus a decrease in sulfide and reduced nitrogen compound concentrations. The sulfate concentrations in 35BWW05 ranged between 33.4 mg/L in October 2015 and 41 mg/L in February 2016 and the nitrate concentrations ranged between 0.728 mg/L in October 2015 and 0.862 mg/L in February 2016. August 2016 ferrous iron, sulfate, and nitrate data were not collected for wells 35BWW05 or 35BWW06, so it is unclear whether these trends continued past February 2016. The majority of the wells sampled between October 2015 and February 2016 had non-detectable levels of ferrous iron, implying potential stabilization of aquifer geochemistry. Pre-Bio plug ferrous iron data was not collected for the four wells (35BWW04, 35BWW08, 35BWW12, and 35BWW14) sampled for ferrous iron during the August 2016 event; however, all four wells appear to support stabilization of post-Bio plug redox conditions with apparently stable post-study ferrous iron concentrations in each well as well as stable sulfate concentrations in wells 35BWW04 and 35BWW12 through August 2016.

Other field parameters include temperature and turbidity. These parameters are not directly related to aquifer rebound conditions, and were therefore not evaluated.

Discussion

The results indicate that there is no significant difference between pH and DO levels before the Bio plug study and current rebound conditions. This may be a function of the large data variability, but could also indicate that current aquifer conditions for pH and DO are representative of pre-Bio plug study conditions. Increasing ORP levels seen in many wells conflicts with DO levels; ORP measurements are often not as reliable as DO measurements. Analytical results for geochemical parameters in samples collected after the Bio plug study indicate localized aquifer recovery.

Conclusions and Recommendations

Based on available data, the aquifer at LHAAP-35B (37) is sufficiently recovered to its pre-Bio plug study geochemical state to begin implementation of the MNA remedy.

UJ - The analysis was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample. 'UJ' not detects are not definite; the analyte may be present.

Notes:
1. February 9, 2012 data collected by Cherokee CRC, LLC (CCRC); analyzed by Test America Laboratories; provided in June 2013 Final Remedial ActionWork Plan for LHAAP-35B(37), Chemical Laboratory, Longhorn Army Ammunition Plant, Karnack, Texas, prepared by AECOM Technical Services, Inc.
2. July 2012 data collected no earlier than July 12, 2012, by U.S. Army Aberdeen Test Center (ATC), Aberdeen Proving Ground (APG), Maryland; analyzed by Microbac Laboratories, Inc.; provided in May 2015 Final Report for the In Situ Microbial Reactor Enhanced Bioremediation Field Test (ATC-11731), Appendix B, Tables, prepared by ATC.
3. Red bars indicate data was collected prior to Bio plug implementation.
4. Blue bars indicate data was collected after operation of the Bio plug system was terminated.

Water Level Measurement/Groundwater Sampling Log Form

Well No. 35BWW09 Date 2/9/12
Sample ID No. 35BWW09
Project ID LHAAP Measured/Sampled By: John Freise
Time: Start 1040 End: 1128

Measuring Point Elevation: Ft. Well Construction Material: 4" PVC
Well Depth Ft: 1) 38.5 2) 3) 4)
Avg. (of valid measurements*)

Water Depth Ft: 1) 25.5 2) 3) 4)
Avg. (of valid measurements*)
(*Minimum of three measurements, last two within 0.01 feet.)

Well Internal Diameter: 4 ~~Ft~~ In.
Riser Above/Below Pad Elevation Marker: Ft.

Pad Elevation: Ft.
Sampling Equipment Used:
Horiba U-52, Cole-Parmer Peristaltic Pump, Teflon Tubing

Equipment Numbers: U-52 HBJ2C3AVR
pH Meter EC Meter Turbidity Meter Thermometer

Casing Volume Information:

Casing ID (inch)	1.0	1.5	2.0	2.2	3.0	4.0	4.3	5.0	6.0	7.0	8.0
Unit Casing Volume (A) (gal/ft)	0.04	0.09	0.16	0.2	0.37	0.65	0.75	1.0	1.5	2.0	2.6

Purging Information:
Measured Well Depth (B): 38.5 Ft.
Measured Water Level Depth (C): 25.5 Ft.
Length of Static Water Column (D) 38.5 : (B) - 25.5 (C) = 13 ft.
Casing Water Volume (E): 0.65 (A) x 13 (D) = 8.45 gal.
Total Purge Volume = 1.0 (gal) (minimum of three casing volumes)

These standard project procedures are applicable to all members of Shaw Environmental, Inc.

1 INTRODUCTION

AECOM reviewed eight (8) data packages from Microbac Laboratory Services, Marietta, OH. Groundwater samples were collected in October 2015, December 2015, February 2016 and August 2016 at Site 37 Longhorn Army Ammunition Plant (LHAAP), Karnack, Texas. Data were reviewed for conformance to the requirements of the following guidance documents: Automated Data Review by Laboratory Data Consultants (ADR.net), United States Environmental Protection Agency (EPA) Contract Laboratory Program National Functional Guidelines for Inorganic Data Review, (EPA, July 2002), and EPA Contract Laboratory Program National Functional Guidelines for Low Concentration Organic Data Review, (EPA, June 2001).

1.1 Intended Use of Data

Groundwater sampling was implemented at the LHAAP-35B (37) site to determine aquifer rebound. Analyses requested included:

- SW6010 – Total Iron
- SW6020 - Total Manganese
- SW9056 – Common Anions (sulfate, nitrate)
- SM3500 Fe – Ferrous Iron
- SM4500-S-(-2)-F-2000 – Sulfide
- EPA415.1 – Total Organic/Inorganic Carbon
- SW8260B – Volatile Organic Compounds
- RSK175 – Dissolved Gases

Table 2 lists the sample identifications and their associated laboratory identifications. **Table 3** lists qualified results with the associated quality control parameter that was exceeded.

1.2 Preservation and Holding Times

Sample identification data were evaluated for agreement with the chain-of-custody (COC). All samples were received in appropriate containers, within the proper temperature range, in good condition, and with the required signatures.

All samples submitted in SDG L15121375 for nitrate analysis exceeded the holding time of 48 hours. Sample concentrations for nitrate are estimated (J/UJ).

Due to sulfate results outside of the calibration range for sulfate, samples L15121373-10, L16020861-04 and L16020861-05 were re-extracted and analyzed outside of the required holding time. The samples have detections for sulfate and the concentrations are estimated (J).

Table 3 shows qualified analytical data.

1.3 Calibrations

Initial calibration criteria modification includes RSD< or = to 30%, two compounds allowed up to 40%. If the continuing calibration verification (CCV) compound exceeds 30% drift, the compound is checked in the LCS, if both are outside recovery limits, the compound is rejected,

R. If only the CCV exceeds recovery criteria and is less than ± 40% drift, then the compound is qualified J or UJ.

1.3.1 Continuing Calibration Verifications (CCV)

All CCVs are within criteria.

1.4 Blanks

Where contamination by a target analyte of one of the various blanks was found, if the sample result for an associated sample was non-detect or less than 5X (10X for common laboratory contaminants) the analyte concentration in the blank, the corresponding sample result for the analyte was qualified B. Where the sample result for the affected analyte was greater than 5X the amount in the blank, no qualifier was applied.

All blanks were free of target analytes.

1.5 Surrogates

All Surrogates are within criteria.

1.6 Laboratory Control Sample (LCS)

All LCS/LCSDs are within criteria.

1.7 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

The matrix spike for sample L15101148-05 yielded a recovery of 78.5% for total manganese in SDG L15101148. This is below the lower control limit of 80%. The parent sample has a detection of total manganese and is estimated (J).

The matrix spike duplicate for sample L15101148-05 yielded a recovery of 111% for sulfate in SDG L15101148. This is greater than the upper control limit of 110%. The parent sample has a detection of sulfate and is estimated (J).

Table 3 shows qualified analytical data.

1.8 Field Duplicate Precision

Precision is the measure of variability of individual sample measurements. Evaluation of field duplicates for precision was done using the Relative Percent Difference (RPD). The RPD is defined as the difference between two duplicate samples divided by the mean and expressed as a percent. Field duplicate RPD limits were set at 0-30% for groundwater matrices. No data required qualification based field duplicate RPD outliers. Overall field precision was acceptable.

2 DATA USABILITY SUMMARY

The data are usable for the intended purposes of the project. The data quality objectives have been met for the project.

Subject: RE: EPA Approval of the Longhorn AAP Site 46 Draft Year 3 RAO

Good Afternoon Rose/JoLynn, EPA has completed the review of the Draft Longhorn AAP Site 46 Year 3 RAO Report and have no questions or comments. EPA agrees that monitoring well 46WW09 needs to be redeveloped before the next sampling event and that a camera survey be performed on monitoring well LHSMW23 before sampling. As far as the dry wells, EPA agrees with the approach to gauge the wells after a rain event greater than 2 inches.

1 INTRODUCTION

The United States (U.S.) Army Corps of Engineers (USACE), Tulsa District, contracted AECOM Technical Services, Inc. (AECOM), to perform remedial actions at multiple sites at the former Longhorn Army Ammunition Plant (LHAAP), Karnack, Texas, under the Huntsville District's Worldwide Environmental Restoration Services Contract Number (No.) W912DY-09-D-0059, Task Order No. DS01. AECOM is performing groundwater monitoring as part of Remedial Action Operations (RA[O]s) for the Monitored Natural Attenuation (MNA) groundwater remedy at site LHAAP-46. A Final Record of Decision (ROD) was executed for LHAAP-46 in September 2010 (USACE, 2010). Groundwater monitoring activities at LHAAP-46 are ongoing, as described in the Draft Final Remedial Action Completion Report (RACR) (AECOM, 2015a). This RA(O) report documents the third year of RA(O) implementation and summarizes the results of inspections and sampling activities completed between February 2016 and August 2016.

LHAAP is located in northeast Texas in the northeastern corner of Harrison County between State Highway 43 in Karnack, Texas, and the western shore of Caddo Lake (see **Figure 1-1**). The nearest cities are Marshall, Texas, approximately 14 miles to the southwest, and Shreveport, Louisiana, approximately 40 miles to the east. Caddo Lake is a large freshwater lake that bounds LHAAP to the north and east. The eastern fence of the LHAAP installation is 3.5 miles from the Texas-Louisiana border.

1.1 Remedial Action Objectives

The Remedial Action Objectives (RAOs) for the LHAAP-46 site are to protect human health and meet applicable or relevant and appropriate requirements (ARARs). There are no unacceptable ecological risks posed by the LHAAP-46 site (USACE, 2010).

The RAOs for LHAAP-46, consistent with the reasonably anticipated future use of the site as a national wildlife refuge, are:

- Protection of human health by preventing human exposure to the contaminated groundwater;
- Protection of human health and the environment by preventing contaminated groundwater from migrating into nearby surface water; and,
- Returning groundwater to its potential beneficial use as a drinking water source, wherever practicable.

1.2 Performance Objectives

The remedy selected for LHAAP-46 is Land Use Control (LUC) and MNA. The performance objectives at LHAAP-46 consist of two components: physical inspections and groundwater/surface water monitoring. As a component of the LUC implementation, the civil survey of the LUC boundary was conducted in November 2014 and recorded in the Harrison County Courthouse in December 2014. Physical inspections are conducted annually to confirm compliance with the LUC objectives, which consist of preventing human exposure to groundwater contamination at levels that pose an unacceptable risk to a future maintenance worker; and ensuring that there is no withdrawal or use of groundwater from the site for anything

other than environmental monitoring and testing until the cleanup levels – maximum contaminant levels (MCLs) – are attained. Groundwater monitoring has been conducted at the site since May 2013, and LHAAP-46 will be included in the facility-wide Longhorn Five-Year Review.

Groundwater and surface water monitoring are being performed to demonstrate that natural attenuation is an effective remedy to:

- Detect changes in environmental conditions that may reduce the efficacy of natural attenuation processes;
- Identify potentially toxic and/or mobile transformation products;
- Verify that the plume is not expanding;
- Verify no unacceptable impact to downgradient receptors, such as discharge to surface water;
- Detect new releases of contaminants to the environment that could impact effectiveness of the natural attenuation remedy; and
- Verify attainment of the remediation objectives.

LHAAP-46 RA(O) monitoring began in May 2013. Monitoring during the first two years was performed on a quarterly basis and documented in annual reports (AECOM, 2015b; AECOM 2016). In accordance with the Remedial Design (RD) (Shaw, 2011), the Year 3 RA(O) monitoring was reduced to semi-annual. The Remedial Action Work Plan (AECOM, 2013) clarified that the suite of analyses for the semiannual events performed starting with the third year of semi-annual monitoring is limited to VOCs for ongoing confirmation of declining concentration trends. The Year 3 semi-annual events were performed in February 2016 and August 2016. An additional event was performed during March 2016 after a significant rain event to attempt to sample wells that had been dry during the February 2016 event.

Groundwater monitoring completed as part of the Year 3 RA(O) consisted of groundwater sampling events at five wells in the shallow zone, nine wells in the intermediate zone, and one well in the deep zone. Surface water sampling of a Goose Prairie Creek tributary, adjacent to LHAAP-46, was conducted in February 2016. This report summarizes the LUC compliance inspection, monitoring well inspection, and results of groundwater and surface water sampling.

1.3 Site Description

The LHAAP-46 site (Plant 2 Area) is located in the north-central portion of LHAAP, in a formerly industrial area where pyrotechnic and illumination devices were produced until 1997 (see **Figure 1-2**). The LHAAP-46 site occupies approximately 190 acres within a triangular area, bounded by Avenue 'P' to the southwest, the LHAAP property boundary fence to the north, and the LHAAP-47 site to the southeast. The surface features at LHAAP-46 include asphalt-paved roads, parking areas, building foundation remnants, abandoned buildings, areas that are wooded, and overgrown grasses and other vegetation. The topography is relatively flat, sloping slightly to the east, with the surface water drainage flowing to the east into tributaries of Goose Prairie Creek, which eventually discharge into Caddo Lake. LHAAP-46 has no known areas of archaeological or historical importance.

1.4 Conceptual Site Model

A detailed Conceptual Site Model (CSM) for LHAAP-46 was previously developed and is presented in the ROD (USACE, 2010). Based on additional data collected as part of final remedy implementation and presented in the LHAAP-46 Draft Final RACR (AECOM, 2015a), the lithologic units at the site have been characterized.

Three water-bearing zones, identified as the shallow, intermediate, and deep zones, are present beneath LHAAP-46. The shallow groundwater zone is encountered at approximately 10 to 28 feet (ft) below ground surface (bgs) and extends to approximately 30 ft beneath LHAAP-46. The lithology of the shallow zone consists mostly of clay with relatively thin discontinuous sand layers. Groundwater tends to occur preferentially in the more permeable thin sand layers. The groundwater is typically unconfined.

The intermediate groundwater zone is generally sandier than the shallow groundwater zone. A relatively thick sand layer was identified in the intermediate groundwater zone in three of the five monitoring wells installed during remedy implementation, but it was not present in the boreholes for monitoring wells 46WW08 and 46WW16, in the northern part of the site. Clay that overlies the sand acts as a leaky aquitard to the shallow groundwater zone. The difference in groundwater elevations seen in shallow and intermediate groundwater zone wells supports some degree of hydraulic separation of those zones, although contaminants of concern (COCs) in the shallow groundwater zone are also present in groundwater in the intermediate zone. Depth to groundwater was observed to range from approximately 19 ft bgs to 37 ft bgs in the intermediate zone wells. The sand interval representing the intermediate zone is at a depth between 36 and 43 ft bgs.

Only one groundwater monitoring well (46WW03) is completed in the deep groundwater zone. Based on previous investigations, the deep groundwater-bearing zone consists primarily of clay, with occasional fine sand and silt layers. However, a thick fine-grained sand bed occurs approximately 88 ft bgs and extends to approximately 101.5 ft bgs. The upper surface of the sand is gradational with an increase in the proportion of sand beginning at about 80 ft bgs. The basal contact of the sand with the underlying shale and clay units is sharp. Monitoring well 46WW03 is screened in this deep sand bed between 90 ft and 100 ft bgs.

The clayey section above the deep sand layer is interpreted as an aquitard separating the intermediate groundwater zone from the deep groundwater zone. A very hard layer identified at 82 ft bgs may represent the upper boundary of the deep groundwater zone where possible mineralization (cementation) has occurred. Based on the depth to groundwater in well 46WW03, it appears that the water-bearing sand in the deep zone is under confined to semi-confined conditions.

Communication between the intermediate groundwater zone and the deep groundwater zone is limited because the difference in groundwater elevations in co-located wells 46WW02 and 46WW03 have stayed near 3.5 ft during the 2nd and 3rd year RA(O) periods. Additionally, the groundwater analytical results corroborate the lack of communication between the intermediate and deep zones as the COCs in the intermediate zone have not migrated downward in this vicinity to impact the deep groundwater zone.

The groundwater COCs in the shallow and intermediate zones at LHAAP-46 are trichloroethylene (TCE) and its daughter products cis-1,2-dichloroethylene (DCE) and vinyl

chloride (VC). Human health risks associated with these COCs are the primary driver for remedial action, as the site poses no unacceptable ecological risks (USACE, 2010).

Previous investigations conducted at the Plant 2 Area between 1991 and 2008 determined the nature and extent of contamination in the soil, groundwater, surface water, and sediments at LHAAP-46. The most likely sources of contamination were spills resulting from a variety of support services that occurred in the area (USACE, 2009 and USACE, 2010). The spills resulted in soil contamination and the COCs released to the surface soil subsequently migrated, either entrained in surface runoff or through leaching, to the groundwater. The previous investigations and the risk assessments concluded that the soil, sediment, and surface water at LHAAP-46 do not pose a risk to the environment or to human health under an industrial exposure scenario for a future maintenance worker (USACE, 2010). The nearest significant surface water body to LHAAP-46 is Goose Prairie Creek, which is located approximately 1,500 ft east of the site. Minor drainages are located north of the site and within the south-central portion of the site where they feed into Goose Prairie Creek. The potentially complete exposure pathways are groundwater used as drinking water and migration of impacted groundwater into surface water. Shallow groundwater is not used as drinking water at the refuge and this potential exposure pathway is eliminated from any hypothetical future receptor because LUCs are in place that prohibit the use of groundwater for any purpose other than for environmental monitoring and testing.

2 SITE ACTIVITIES AT LHAAP-46

2.1 Annual LUC Compliance Inspection, Monitoring, and Repairs

2.1.1 Annual LUC Compliance Inspection

The LUC for LHAAP-46 is groundwater restriction. Groundwater use at LHAAP-46 is restricted to environmental monitoring and testing until levels of COCs in groundwater and soil allow unrestricted use and unlimited exposure (UUUE). The restriction applies to groundwater underlying a 63.772-acre tract defined by the surveyed LUC boundary (AECOM, 2015a). AECOM performed the annual LUC compliance inspection for LHAAP-46 on July 29, 2016. The Annual LUC Compliance Certification Documentation Form for the third year RA(O) period is included in **Appendix A**. No use of groundwater, installation of new groundwater wells, or tampering with existing wells at LHAAP-46 was observed during the inspection.

2.1.2 Well Field Operation and Maintenance

Inspections of the conditions/integrity of monitoring wells are conducted during each sampling event and the information is recorded on the field sampling forms. Maintenance or repairs are performed as needed, based on observed conditions. For the 3rd annual RA(O) reporting period, no damage to bollards, well pads, or protective well casings was observed. Photographs from February 2016 sampled monitoring wells are provided in **Appendix B**. **Appendix C** provides information about the individual well surface conditions observed during well monitoring events.

Silting has occurred in monitoring wells 46WW09, based on the measured total well depth at the time of sampling compared to the total completion depth or historical total depth measurements. Monitoring well 46WW09 contains approximately 0.7 ft of silt in the screen. Well 46WW09 will be redeveloped prior to the next sampling event.

Based on the measured total well depth (approximately 31 ft below top of casing) at the time of sampling compared to the total completion depth (approximately 42 ft below top of casing), LHSMW23 contains an obstruction at approximately 10 ft above the total depth of the well. The well bottom was noted to be “firm” instead of “soft” during collection of the total depth measurement and since a significant portion (11 feet) of the 20-foot screen is obstructed, the cause of the obstruction is unlikely to be silting. A camera survey will be performed prior to the next sampling event to determine the cause of the obstruction.

Mowing the well areas is conducted as part of routine maintenance at the site. A brush hog was used to remove vegetation around all wells at LHAAP-46 on August 3, 2015 and July 28, 2016. **Table 2-4** provides a summary of the maintenance and repairs that were performed at the site in RA-O Year 3. Bollards and well casings were power washed and painted for several wells in August 2015: 46WW01, 46WW02, 46WW03, 46WW04, 46WW05, 46WW06, 46WW11, LHSMW18, LHSMW19, LHSMW20, LHSMW22, LHSMW23, and LHSMW25. Several additional wells that are not sampled as part of the RA(O) monitoring are noted as needing paint: LHSMW08, LHSMW11, LHSMW12, LHSMW14, LHSMW15, LHSMW16, LHSMW21, LHSMW24, LHSMW27. These wells will be painted during 2017 maintenance activities.

2.2 Groundwater Monitoring

All LHAAP-46 monitoring wells are depicted on **Figure 2-1.** The RAWP (AECOM, 2013) proposed inclusion of 20 wells in the MNA program (10 shallow groundwater zone wells, nine intermediate groundwater zone wells, and one deep groundwater zone well). The RACR (AECOM, 2015a) proposed inclusion of 21 wells in the monitoring program, which included one additional intermediate groundwater zone monitoring well that was installed in May 2014 (46WW16). The shallow and intermediate zone wells that are monitored are identified by unique symbols in Figure 2-1. Monitoring wells LHSMW08, LHSMW09, LHSMW10, LHSMW11, LHSMW12, LHSMW13, LHSMW14, LHSMW15, LHSMW16, LHSMW21, LHSMW24, and LHSMW27 are not included in the monitoring program per the RAWP (AECOM, 2013).

During the February and August 2016 events, some of the wells were dry or had insufficient water for a sample to be collected. Additional sampling was conducted in late March 2016 after a major rainfall event (7.55 inches one day followed by 2.49 inches the next day) to attempt to sample wells that were dry during the February 2016 event in accordance with the dry well sampling protocol that requires wells observed to be dry during the preceding scheduled monitoring event to be regauged after any rainfall event exceeding two inches. Two of the previously dry wells produced sufficient groundwater after the major rain fall event in March 2016 (46WW01 and LHSMW18) and samples were collected.

Before collecting groundwater samples, the wells were gauged using a water level probe and the depth to water was recorded to the nearest 0.01 ft from the top of casing. Groundwater samples were collected using the low-flow sampling procedures described in the Groundwater Sampling Procedures found in the Installation-Wide Work Plan (IWWP) (AECOM, 2014). The low flow method allows representative samples of groundwater in the formation adjacent to the well screen to be collected, eliminating mixing of stagnant water above and below the well screen. After water quality parameters stabilized and were within acceptable ranges, samples were collected at the same low flow rate. However, some wells went dry, even when pumping at the lowest possible flow rate. For these wells, the well was allowed to recharge and then a sample was collected using a bailer. Samples from LHSMW18 and 46WW01 were collected using a bailer in March 2016 and samples from 46WW01 and 46WW10 were collected using a bailer in August 2016.

All groundwater samples were analyzed for volatile organic compounds (VOCs) according to SW-846 Method 8260b. Thallium is no longer considered a COC based on 1st year RA(O) monitoring results; therefore, thallium is not included in the monitoring program. Samples from a subset of wells were also analyzed for geochemical indicators, which is further discussed in Section 3.

Sample collection field forms are provided in **Appendix C**.

2.2.1 Groundwater Elevations and Flow Direction

Synoptic water level measurements were performed on 20 wells in February 2016 and 21 wells in August 2016. Twelve wells were dry in February 2016 and 11 wells were dry in August 2016, so they could not be gauged. Groundwater elevations are summarized in **Table 2-1**.

After the February 2016 RA-O event, >2-inch rainfall events occurred in March 2016. The March 2016 rain events were significant (7.55 inches in March 9, 2016, followed by 2.49 inches on March 10, 2016 with <1 inch rainfall events continuing for several subsequent days). On March 28, 2016, following the rain events, a water level survey was performed for the following wells that had been dry in February 2016 and were located in the vicinity of the TCE plume: 46WW01, 46WW12, 46WW13, 46WW15, LHSMW18, LHSMW20, LHSMW22, and LHSMW23. Groundwater was present in monitoring wells 46WW01 and LHSMW18, which were subsequently sampled; the remaining wells were dry. Between March 2016 and August 2016 (the second Year 3 event); there were two rainfall events that exceeded two inches (4.53 inches on April 18, 2016 and 4.84 inches on May 27, 2016).

After several rain events (4.53 inches April 18, 1.43 inches April 20, 0.92 inches April 27, 0.12 inches April 29, and 0.36 inches May 1, 2016), an additional gauging event was performed on 9 May 2016 for previously dry wells: 46WW12, 46WW13, 46WW15, LHSMW20, LHSMW22, and LHSMW23. Each of these wells was dry.

In the future, any wells that were dry during the previous sampling event will be gauged after 2 inches of rain is received in accordance with the RACR (AECOM, 2015a). Additionally, previously dry wells that had water after >2 inches of rainfall (i.e., 46WW01 and LHSMW18) will be gauged after 1-inch rainfall events to determine if a new baseline should be set for those well.

2.2.1.1 Shallow Groundwater Zone

During the February 2016 monitoring event, shallow wells 46WW01, 46WW12, 46WW13, 46WW15, LHSMW11, LHSMW12, LHSMW15, LHSMW17, LHSMW18, LHSMW20, and LHSMW22 were dry. Based on the gauging data collected during this event from the remainder of the shallow wells, the groundwater flow direction is interpreted to be to the east (**Figure 2-2**).

During the August 2016 event, shallow wells 46WW12, 46WW13, 46WW15, LHSMW12, LHSMW15, LHSMW17, LHSMW20, LHSMW22, LHSMW24, and LHSMW27 were dry. Based on the gauging data collected during this event from the remainder of the shallow wells, the groundwater flow direction is interpreted to be to the east (**Figure 2-3**).

The interpretation of shallow groundwater flow direction is consistent with what was presented previously in the RD document (Shaw, 2011) (see **Figure 2-4**) as well as the 1st year RA(O) report (AECOM, 2015b), and 2nd year RA(O) report (AECOM, 2016).

From February 2016 to August 2016, shallow zone groundwater elevations increased an average of 0.33 ft across the site. Groundwater elevations increased for seven shallow monitoring wells; the increase ranged from 0.07 ft to 2.97 ft. Groundwater elevations decreased in shallow monitoring wells 46WW01, 46WW10, LHSMW14 (0.6 ft, 0.09 ft and 1.45 ft, respectively). Water levels also decreased in LHSMW24 and LHSMW27 between February 2016 (when groundwater elevations could be measured in these wells) and August 2016 (when these wells were dry).

2.2.1.2 Intermediate Groundwater Zone

The intermediate zone wells, except for well LHSMW23, contained water during the two gauging events. (As noted in Section 2.1.2, there appears to be an obstruction in LHSMW23 11

feet from the total depth of the well.) **Figures 2-5 and 2-6** represent the groundwater potentiometric surface for the intermediate groundwater zone, as interpreted during the February 2016 and August 2016 monitoring events, respectively. The groundwater elevation data in 46WW08 is anomalous and was not used in developing the contour maps. The groundwater elevation in 46WW08 is similar to the shallow zone elevations, despite the well being screened in the intermediate zone. It is possible that there is leakage from the shallow zone to the intermediate zone in this area of the site such that the well reflects shallow zone conditions. The boring log identifies the saturated zone beginning at 20 ft bgs. The depth to groundwater in the well is also at approximately 20 ft bgs. The measuring point elevation is well within the elevations for nearby wells (e.g., top of casing elevation at LHSMW19 is 212.96 ft above mean sea level (msl) and the top of casing elevation at 46WW08 is 211.73 ft above msl). Therefore, the measuring point elevation does not appear to be in error. The anomalous depth to groundwater measurements have been observed consistently since RA(O) monitoring began in May 2013; therefore, these measurements are not due to field error.

The groundwater flow direction in the intermediate groundwater zone is generally interpreted to be to the north, consistent with the flow direction presented in the RD document (Shaw, 2011) (**Figure 2-7**), the 1st year RA(O) report (AECOM, 2015), and the 2nd year RA(O) report (AECOM, 2016).

2.2.1.3 Deep Groundwater Zone

Because well 46WW03 is the only well screened in the deep groundwater zone, a potentiometric surface map for the deep zone cannot be constructed.

2.2.2 Vertical Gradients

The only shallow and intermediate zone co-located wells with available water level data are monitoring wells 46WW04 and 46WW06, respectively. The elevation difference between these wells ranged between 15.6 ft to 16.7 ft with a downward vertical gradient. This indicates that there is hydraulic separation between the shallow and intermediate zones at that location. The perpendicular direction of horizontal groundwater gradients between these two zones also indicates that these zones are discrete water-bearing units. However, as discussed above, it is believed that the clay that overlies the intermediate zone sand acts as a leaky aquitard to the shallow groundwater zone.

A similar analysis between co-located intermediate and deep zone wells 46WW02 and 46WW03, respectively, indicates an elevation difference of approximately 3.3 ft between these two zones with a downward vertical gradient. This information indicates that there is hydraulic separation between these two units.

2.3 Groundwater Analytical Results

VOC analytical results for the 2016 semiannual samples are presented in **Table 2-2**. **Table 2-3** provides historical results for COCs. Laboratory reports are provided in **Appendix D**. **Figures 2-8** and **2-9** depict the shallow zone TCE results for wells sampled in February 2016 and August 2016, respectively.

During the 3rd year RA(O) monitoring events, one COC, TCE, was detected above the MCL (5 µg/L). TCE was detected above the MCL in two shallow wells during both the February 2016

and August 2016 events: 46WW11 (20.5 micrograms per liter [µg/L] and 21.2 µg/L, respectively) and LHSMW19 (24.2 µg/L and 8.53 µg/L, respectively).

Well LHSMW18 was sampled in March 2016, and the TCE concentration (3.35 µg/L) was below the MCL. TCE sample results from LHSMW18 were above the MCL between December 1994 and May 1998; however, the TCE concentration (4.8 µg/L) was just below the MCL in the last historical sampling event (February 2007). LHSMW18 was not sampled during Year 1 or Year 2 RA(O) monitoring because the well was dry.

Figures 2-10 through **2-11** depict the intermediate zone TCE data for wells sampled in February 2016 and August 2016, respectively. TCE was detected above the MCL in intermediate wells 46WW02 and 46WW05 during both events. Samples from 46WW05 had concentrations of 1,1-DCE above the MCL (7 µg/L) between May 2013 and February 2015; however, the February 2016 (3.29 µg/L) and August 2016 (1.84 J µg/L) results were below the MCL.

No COCs were detected above the laboratory reporting limit in any samples from the only deep zone well at the site, 46WW03.

Additional discussion on the COCs and their distribution, including concentration trends, is included in **Section 3.1**.

2.4 Surface Water Sample Results

Figure 2-1 shows surface water sample locations associated with LHAAP-46. Surface water sample location 46SW09 is located in Goose Prairie Creek adjacent to the LHAAP-46 site. For the baseline event, a surface water sample from 46SW09 was collected in September 2013 (the tributary was dry in May and August 2013) and analyzed for VOCs. COCs were not detected in the surface water sample at concentrations exceeding laboratory reporting limits. In response to U.S. Environmental Protection Agency (EPA) comments on the LHAAP-46 draft RACR report, the surface water sample location was subsequently relocated from 46SW09 to 46SW10. Surface water sample location 46SW10 is located in the tributary to Goose Prairie Creek. Sample location 46SW10 is downgradient of the intermediate zone groundwater plume but is cross-gradient from the shallow zone groundwater plume. During the 3rd year RA(O) monitoring period, a surface water sample was collected from 46SW10 on February 3, 2016 and analyzed for VOCs. Analytical results are provided in **Table 2-2**. No VOCs were detected in the surface water sample.

LHSMW21 is the nearest cross-gradient shallow zone well and 46WW16 is the nearest upgradient intermediate zone well to surface water sampling location 46SW10. During the 3rd year RA(O) sampling period, the groundwater elevations in LSHMW21 were 185.52 ft above msl and 186.55 ft above msl. Groundwater elevations at 46WW16 were 170.56 ft above msl and 170.93 ft above msl. The bottom of the ditch at surface water sampling location 46SW10 is 197.27 ft above msl. Therefore, during the 3rd RA(O) sampling period, the groundwater elevation was much lower (by more than 10 - 25 ft) than the bottom of the ditch, and there was no potential for groundwater to discharge to surface water.
