Karnack, Texas

FINAL MONTHLY MANAGERS' MEETING

Minutes

DATE: July 16, 2013
TIME: 11:00 a.m.
PLACE: **Army Trailer, Teleconference – 866-203-6896, passcode 1759304791**

Welcome **RMZ**

Attendees:

Army BRAC: Rose Zeiler
EPA: Rich Mayer, Steve Tzhone, Janetta Coats, Barry Forsythe-USFWS liaison to EPA (by phone), Kent Becher-USGS liaison to EPA
TCEQ: April Palmie, Dale Vodak
USACE: Aaron Williams
USFWS: Paul Bruckwicki
AECOM: Dave Wacker, Gretchen McDonnell, Veronica Robinson (by phone), Josh Miller (by phone)
AEC: Robin Paul, Marilyn Plitnik

Action Items
AECOM

- Submit Field Standard Operating Procedures to agencies by June 19th. **Complete.** Four primary SOPs have been submitted and comments received. Another set is coming to agencies later this week.
- Submit repackaged IWWP to agencies by mid-July. **Pending.** Currently in Army review. Outstanding EPA comments are also addressed in this update. New date for submittal to agencies by Tuesday, July 23rd.
- Include review and submittal milestone dates in the transmittal letter for the draft 5-Year Review Report. **Pending**. In Army review. Submittal to agencies by Tuesday, July 23rd.
- Provide a summary of the treated water nutrient data in October, after fluidized bed reactor feeding optimization has been implemented. **Pending.** AECOM has kicked off the optimization of the fluidized bed reactor. A comparison of pre- and post-optimization nutrient levels will be presented to agencies in the Fall. Mr. Mayer and Mr. Becher discussed a concern regarding historical reinjection of treated water and impacts of residual nutrients in the treated water on groundwater. Mr. Becher stated that, if dissolved oxygen is great enough, ammonia may convert to nitrate in the presence of oxygen, which may be a concern because there is a nitrate MCL of 10 mg/L. At this point, Army is not injecting water. Ms. Zeiler stated that this is something the Army can keep in mind if injection becomes part of the treatment process again.
- Add the next round of 1,4-dioxane sampling to the 6-month outlook schedule and redistribute the schedule. Review the dates provided for future sampling events for accuracy. **Pending.** Change action item to "Redistribute the 6-month outlook schedule after adding 1,4-dioxane sampling. "

Army

- Combine decision documents for LHAAP-19 and LHAAP-56, -65, and -69 before returning them to TCEQ, for TCEQ staffing purposes. **Pending.**
- Submit comments for four priority Field Standard Operating Procedures (well installation, well development, groundwater sampling, Direct Push Technology) to AECOM by end of June. **Complete.**
- Army will work to finalize a teleconference to discuss responses to agency comments on LHAAP-47 Draft Final ROD for July 1st or 2nd. **Complete.**
- Mr. Williams will provide Mr. Wacker with dates relating to BERA items, for inclusion in the Document and Issue Tracking table. **Complete.**

EPA

Mr. Mayer requested historical pH data on MW-7. Mr. Wacker stated that the pH data are in the field notes which are included in the compliance sampling results data reports. Mr. Becher is concerned that the installation of a new well nearby may be influencing the pH.

EPA 1,4-dioxane split sampling data has been validated and a report will be submitted to the group. An EPA chemist is evaluating and will compile thoughts as to why there are differences in the data between Army and EPA samples. The EPA chemist mentioned that 8270 SIM recoveries are 50-60%, while the Method 522 has 100% recovery. While there are differences in the split data, Mr. Becher stated that Army is following EPA guidance in how they are conducting their analysis. Mr. Becher stated that the 1,4-dioxane methods are under development now that the chemical is becoming a focus of more scrutiny. Mr. Wacker summarized that the recent sampling indicates levels of 1,4-dioxane found at LHAAP are low and the actual variance between the split samples is a factor of 2, not an order of magnitude.

Ms. Palmie mentioned that the public may be concerned whether perimeter wells have been sampled for 1,4-dioxane. Mr. Becher stated that the perimeter wells have been analyzed for volatile organic compounds, including trichloroethane with which 1,4-dioxane is associated. Trichloroethane was not a concern in perimeter wells so 1,4-dioxane would not be suspected in perimeter wells.

TCEQ

AEC

Defense Environmental Restoration Program (DERP) PBR Update **AECOM**

- Upcoming document submissions to regulators (see Document and Issue Tracking table)

Item 1 (LHAAP-47 ROD) – DF due on July 20th. Comment resolution meeting was held on July 15th. Email documenting technical issue resolution is scheduled to go to agencies on July 17th.

Item 2 (LHAAP-18/24 Data Gap Report) – A preliminary data review will be conducted for the group for today, after the MMM. Draft report due to agencies at the end of the month. Draft FS is set for submittal to agencies in September.

Item 3 (LHAAP-03 ROD) – Currently under agency review. August 30th is the deadline for agency comments. TCEQ's comments have already been submitted.

Item 4 (5-Year Review Report) – Will be submitted to agencies on July 23rd. AECOM will add the required document signature date to the Document and Issue Tracker.

Item 5 (Explanation of Significant Differences) – Add "18/24" to the description on the tracker document. Document is in Army review. The ESD requests relief from weekly air sampling that has been done for the past 26 weeks without any exceedances.

Item 6 (GWTP Quarterly Reports) – The 1st quarter 2013 has been issued. Mr. Becher and Ms. Palmie asked for a hard copy of the quarterly reports. AECOM will check the document distribution list to ensure Mr. Becher and Ms. Palmie are designated to receive a hard copies.

Item 7 (IWWP and SOPs) – Discussed previously. July 23rd new date for submittal to agencies for IWWP.

Item 8 (LHAAP-46 and LHAAP-67 RACRs) – Data has been validated. RACRs are under development. IDW has been characterized as non-hazardous and disposal will be moving forward.

Item 9 (Monthly Managers' Meeting) –Next meeting will be Tuesday, August 20th at 10AM, by teleconference.

Item 10 (LHAAP-37, LHAAP-50 and LHAAP-58 Field Work) – AECOM will notify EPA and TCEQ when a start date for field work has been confirmed. AECOM tentatively plans to being work on July 22nd. Required completion date for field activities is September 30th, so agencies will be seeing field work completion letters for LHAAP-37 and LHAAP-58 likely first, followed by LHAAP-50.

Item 11 (LHAAP-29 PSI) – PSI Workplan is in development. Next field activity after this summer is planned to be a PSI at LHAAP-29. Tentatively planning for Fall field work.

Items 12-13 (LHAAP-17 RD WP and LHAAP-16 RD WP) – Placeholders for future documents.

Item 14 (July RAB) – July RAB meeting to be held tonight. October RAB meeting tentatively scheduled for Tuesday, October 29th at 6PM.

Item 15 (GWTP) – FBR optimization in progress. INF pond soil repair and seeding was done. Vegetation has started to fill in.
Topsoil was placed to address minor erosion and subsidence identified at Landfill 12 and Landfill 16. 5-Year Review Report recommendations table will be updated to reflect these items have been completed.

Item 16 (Administrative Record Update) – Update for documents from April – June 2013 should be submitted to Army by end of July.

Item 17 (BERA Addendum Work Plan) – In agency review.

Items 18-19 (BERA Field Work and BERA Addenedum) – Placeholders for future work.

Item 20 (Nutrient Issue for HB and INF) – Pre- and Post-Optimization nutrient level comparison will be presented in Fall, and will be added to the action items.

- Upcoming field work

Field work for 37, 50 and 58 tentatively commences next week and will likely start with DPT, with well installation to follow.

- Monthly data

Data report has been submitted to agencies and will be appended to the minutes of this meeting. Validation report for perimeter wells and surface water compliance sampling needs to be formally submitted. AECOM will prepare a Technical Memo providing the validation report so it can be added to the Administrative Record. The Technical Memo will be submitted to USACE for review prior to the quarterly RAB meeting, then will be transmitted to the MMM group. Validated results of the perimeter well and surface water sampling will be summarized and presented to the RAB.

- Quarterly reports - discussed previously.
- Groundwater Treatment Plant
    - Air Monitoring – discussed previously
    - INF Pond Topsoil and erosion control status - discussed previously
    - GWTP Longer-Term Plan – no update

Other DERA Program Update **Army**

- Status of Supplemental BERA – discussed previously
- Five-Year Review Report Update – discussed previously

MMRP Update **Army**

- Update – no update

Other Environmental Restoration **Army**

- CRP/CIP Update - Army will announce a final call for comments tonight at RAB.
- Site 19 Decision Document update - discussed previously
- Decision Documents for multiple sites – status update – discussed previously
- Site 37 Bioplug – APG is late with their report to AEC. Army requires the data to be able to submit it to agencies and present it to the RAB. AEC will contact APG and attempt to obtain validated project data.
- 1,4-dioxane sampling at Longhorn – discussed previously

Programmatic Issues **RMZ/RM/AP**

- Status of Dispute – no update. After the LHAAP-29 field work is accomplished this fall, AECOM's work will essentially come to a halt if dispute is not resolved.

USFWS Update **RMZ/PB**

- Environmental Restoration Issues with Transfer Schedule Impact –Damaged Well - LHAAP-35AWW07 was run over by a bulldozer during USFWS clearing activities. This well is part of LHAAP-58 arsenic monitoring and may need to be replaced. Likely need to determine when it was last sampled and what the data showed to determine whether it must be replaced. Army need to provide USFWS with map of well coordinates for the new wells installed on transferred property, if there are any at this time(LHAAP-46 and LHAAP-67, specifically). USFWS has placed a sheet in the open hole to prevent things from getting into the well, but the well needs to be better secured. A cover of some kind needs to be put in place until it can be abandoned. Need a recommendation for what to do with the well by the next MMM. AECOM's and USFWS will coordinate to have AECOM's driller work on the well. Ms. Palmie suggested all wells could be placed on a shared Google Earth page for easier reference.
- USFWS Comments on Documents – None

Schedule Next Managers' Meeting – Tuesday, August 20th at 10AM. By teleconference.

Discussion of LHAAP-29 ISCO remedy. Army is evaluating alternatives to the approved remedy which may provide a more effective solution.

Adjourn

New Action Items

AECOM

- Provide recommendation on damaged well 35AWW07.

ARMY

- Provide USFWS with map of well coordinates for new wells on transferred properties (specifically LHAAP-46 and LHAAP-67).

EPA

- EPA's 1,4-dioxane split sampling data has been validated and a report will be submitted to the group.

AEC

- Request validated LHAAP-37 bioplug demonstration data from APG.

MONTHLY MANAGERS' MEETING

Minutes

DATE: **August 28, 2013**
TIME: 10:00 a.m.
PLACE: **Teleconference – 866-203-6896, code 1759304791**

Welcome **RMZ**

Attendees:

Army BRAC:	Rose Zeiler
EPA:	Rich Mayer, Barry Forsythe-USFWS liaison to EPA, Phil Turner, Terry Burton
TCEQ:	April Palmie, Dale Vodak
USACE:	Aaron Williams
USFWS:	Paul Bruckwicki
AECOM:	Dave Wacker, Gretchen McDonnell, Josh Miller
AEC:	Marilyn Plitnik

Action Items
AECOM

- Submit repackaged IWWP to agencies by mid-July. **Complete.** This document was submitted in component pieces to facilitate review, with an updated consolidated version of the IWWP submitted to agencies this morning.
- Include review and submittal milestone dates in the transmittal letter for the draft 5-Year Review Report. **Complete.** Mr. Mayer stated that EPA priorities are the 18/24 Data Gap report and 5-Year Review, and they are trying to meet the 30-day review period for the 5-Year Review Report.
- Provide a summary of the treated water nutrient data in October, after fluidized bed reactor feeding optimization has been implemented. **Pending.**
- Add the next round of 1,4-dioxane sampling to the 6-month outlook schedule and redistribute the schedule. Review the dates provided for future sampling events for accuracy. **Complete.** Next round scheduled for early December.
- Provide recommendation on damaged well 35AWW07. **Complete.** Well has been replaced with 35AWW07R and has been relocated about 10 feet, and moved out of the ditch line.

Army

- Combine decision documents for LHAAP-19 and LHAAP-56, -65, and -69 before returning them to TCEQ, for TCEQ staffing purposes. **Pending.** Deadline currently for the end of September.
- Provide USFWS with map of well coordinates for new wells (specifically, LHAAP-35B(37), LHAAP-35A(58)LHAAP-46, LHAAP-50 and LHAAP-67) and existing wells on transferred properties. **Pending.**

EPA

- Submit EPA's validated 1,4-dioxane split sampling data report to the MMM group. **Complete.** Army will review the conclusions of the report to determine if any changes should be implemented prior to the next round of 1,4-dioxane sampling (scheduled for the first part of December).

TCEQ

AEC

- Request validated LHAAP-37 bioplug demonstration data from APG. **Complete.** Received draft report from APG. No reduction in concentrations has been seen at this point.

Defense Environmental Restoration Program (DERP) PBR Update **AECOM**

- Upcoming document submissions to regulators (see Document and Issue Tracking table)

Item 1(5-Year Review Report) – 30-day comment period September 14th deadline

Items 2/3 (SOPs/IWWP, QAPP, and HASP) – Agency comments on SOPs due are scheduled for September 14 and on the remainder of the IWWP by September 27th.

Item 4 (LHAAP-18/24 – Explanation of Significant Differences) – Army review should be complete by the end of the week, with submittal to the agencies to follow.

Item 5 (GWTP Quarterly Report) – These reports are not primary documents, so review can be prioritized behind other more critical documents.

Item 6 (LHAAP-46 and LHAAP-67 RACRs) – RACR reports in progress. IDW has been characterized as non-hazardous and manifests will be coming to Ms. Zeiler for review to facilitate disposal. The LUC boundary for LHAAP-46 is defined based on groundwater sampling results. The LUC boundary definition is still in progress for LHAAP-67 where additional groundwater data is needed. ROD language says the LUC must be recorded within 90 days of the completion report. AECOM will develop a path forward for getting the LUC boundary established, surveyed and recorded.

Item 7 (Monthly Managers' Meeting) – Action item review from last meeting indicates the following outstanding items:

-GWTP Quarterly Reports. Mr. Wacker suggested that agency comments be incorporated in a revised version of the current document instead of putting the changes into the following quarterly report. Final hard copies of the revised document will be distributed to the MMM group. The first report to be done in this way will be the 4th quarter 2012 report.

-Data Validation Technical Memo. In Progress. Validation reports for perimeter and surface water data should be submitted to USACE as an attachment to an explanatory technical memo, and then added to the AR.

Item 8 (LHAAP-37, 50 and 58) – Ms. McDonnell provided an update on the progress of field work. All direct push/hydropunch work is complete. One well remains at LHAAP-58. Two potential (dependent upon lab data) wells remain at LHAAP-37. Approximately 50% of the wells are complete at LHAAP-50. All drilling and well development work is projected to be complete by 25 September. Mr. Mayer stated everything looked fine during recent observation visits conducted by he and Mr. Becher.

Items 9, 10 and 11 (LHAAP–29 PSI WP, LHAAP-17 PDI WP, LHAAP-16 RD WP) – Placeholders for documents in Army review.

Item 12 (LHAAP-18/24 Data Gap Report) – EPA has requested a 20-day extension to review the document. Ms. Zeiler stated that while the Army wants all agency input, the LHAAP-18/24 Data Gap report is a secondary document that is not eligible to enter the dispute process. However, the Revised Feasibility Study which the data gap investigation data will feed into, is a primary document and can go through the informal dispute process for any comments not resolved on the Data Gap Report.

Item 13 (LHAAP-03 Record of Decision) – Army will be sending out Response to Comments to the agencies this week. A 20-day extension may be done to allow for further discussion.

Item 14 (October RAB) - Scheduled for October 29th at 6pm. LHAAP-37 bioplug study results may be reported during this meeting. AECOM will provide a short presentation on in-situ bioremediation/bioaugmentation. The dispute status will probably also be an item of discussion.

Item 15 (GWTP O&M / Air Monitoring) – AECOM has initiated work on the FBR nutrient optimization, working on determining the minimum levels of nutrients necessary to keep perchlorate at zero without overfeeding. INF Pond cover soil repairs look good but establishing vegetation has been difficult given heat and dry weather, leading AECOM to plan to reseed in the fall.

Item 16 (Administrative Record Update) – 2nd quarter 2012 Administrative Record update is planned for submittal to agencies by the end of the month.

Item 17 (BERA Addendum Work Plan) – Agency comments have been received on the work plan and RTCs should be back to agencies by September 4th.

Item 18 (BERA Field Work) – The BERA contractor will be ready to mobilize at the end of September, with field work to begin by middle of October.

Item 19 (BERA Addendum) – Placeholder.

Item 20 (Nutrient Issue for Harrison Bayou and INF Pond) – Discussed under Item 15.

Item 21 (LHAAP-18/24 Revised Feasibility Study) - Discussed under Item 12.

Item 22 (LUC Management Plan) - The end of the fiscal year is approaching, requiring the annual update of the document be prepared. The update this year may be an acknowledgement page stating that no new changes have been done during the fiscal year.

Item 23 (CRP) – RTCs are currently being reviewed by Ms. Coats, EPA. TCEQ concurs with the RTCs.

- Upcoming field work - Sampling of all new wells at 37, 50, 58 and wells at 46 and 67 and surveying will be done in September and October. Majority of the field work planned subsequent dates is in question due to the Army/EPA dispute.
- Monthly data

- Technical Memorandum for surface water and perimeter well data- Discussed in Item 7 above
- Quarterly reports – Discussed in Item 7, above.
- Groundwater Treatment Plant – All items discussed earlier in the meeting.
    - Air Monitoring – Discussed in Item 4, above.
    - INF Pond Topsoil and erosion control status
    - GWTP Longer-Term Plan – Discussed in Item 15 above

Other DERA Program Update **Army**

- Status of Supplemental BERA – Discussed in Items 17-19, above.
- Five Year Review Report Update – Discussed in Item 11, above.

MMRP Update **Army**

- Update – no update

Other Environmental Restoration **Army**

- CRP/CIP Update - Discussed in Item 23, above.
- Site 19 Decision Document update- already discussed
- Decision Documents for multiple sites – status update - already discussed
- Site 37 Bioplug – Discussed above.
- 1,4-dioxane sampling at Longhorn – Discussed above.
- Discussion of EPA's specific concerns regarding bioaugmentation and any case studies/lines of evidence supporting potential detriment to the aquifer
    - Mr. Burton stated that the main concern of EPA headquarters will be introduction of non-indigenous bacteria. Are some kind of "super-bacteria" being introduced ? Is the public aware of what is going to be introduced and are they okay with that?
    - Mr. Burton stated AECOM has already started addressing these questions by saying the bacteria that will be used for bioaugmentation are common bacteria, are not harmful and are not genetically-engineered. If this information is presented at the RAB, that would likely close the loop and resolve the EPA's comment about concerns with bioaugmentation.
    - Mr. Wacker summarized that the latest best practice in ISB is to bioaugment as a standard practice to avoid stalling of dechlorination and formation of more harmful daughter-products.
    - In order to demonstrate Army is meeting UIC substantive requirements, Army will submit paperwork to Ms. Palmie (copy to EPA) and she will facilitate review by the UIC Permit Team. The periodic MNA reports for LHAAP-58 should contain the UIC reporting documents. Ms. Palmie stated that two weeks allowed for TCEQ review of the UIC documents is insufficient. Army will work to find a resolution to provide TCEQ with more review time, but still meet the FFA deadline for the remedy to be in place by September 30, 2013.

Programmatic Issues **RMZ/RM/AP**

- Status of Dispute – no update

USFWS Update **RMZ/PB**

- Environmental Restoration Issues with Transfer Schedule Impact – no update
- USFWS Comments on Documents – no comments

Schedule Next Managers' Meeting – Will be held by teleconference on September 24th at 10AM.

Adjourn

New Action Items

AECOM

- Develop a path forward for getting the :LHAAP-46 LUC boundary established, surveyed, and recorded.
- Add Phil Turner (turner.philip@epa.gov) to the MMM distribution list.

ARMY

- Reschedule LHAAP-58 EISB activities to provide TCEQ with more review time of the LHAAP-58 UIC documents.
- Update LUC Management Plan by end of FY

USFWS:	Paul Bruckwicki
AECOM:	Gretchen McDonnell, Josh Miller
AEC:	Robin Paul

Introduction of New LHAAP USACE Project Manager
Dr. Zeiler provided an introduction of Rick Smith with USACE, who will be replacing Mr. Lambert as the USACE Project Manager. Mr. Smith was the USACE Project Manager for LHAAP from 2003 to 2007 so knows the history of the site. Mr. Smith is a P.E. Geological Engineer who has 30 years with USACE.

Action Items
AECOM

- Provide a summary of the treated water nutrient data in late fall, after fluidized bed reactor feeding optimization has been implemented. **Pending.**
- Develop a path foward for getting the LHAAP-46 and 67 LUC boundaries established, surveyed and recorded. **Complete.** The path forward is to provide TCEQ, EPA and USFWS (as the future transferee) with maps of proposed LUC boundaries for review. These maps will present the most recent round of groundwater data supporting the proposed LUC boundaries, and likely will be supported by a table containing a few additional rounds of historical groundwater data. Once stakeholder feedback is obtained, the LUC boundaries will be finalized, surveyed and recorded in Harrison County. Concurrence with this path forward was provided by Ms. Palmie, Mr. Mayer and Mr. Bruckwicki.
- Add Phil Turner (turner.philip@epa.gov) to the MMM distribution list. **Complete**.

Army

- Combine decision documents for LHAAP-19 and LHAAP-56, -65, and -69 before returning them to TCEQ, for TCEQ staffing purposes. **Pending.** On 26 September, Army will be reviewing with TCEQ the path forward for LHAAP-19.
- Provide USFWS with map of well coordinates for new wells (specifically, LHAAP-35B(37), LHAAP-35A(58), LHAAP-46, LHAAP-50 and LHAAP-67) and existing wells on

transferred properties. **Pending.** Survey work has been completed for new wells at LHAAP-46 and LHAAP-67 in April and May. Survey work for new wells just installed at LHAAP-35B(37), LHAAP-35A(58) and LHAAP-50 will begin the week of September 30th. LUC boundary surveys will be done under separate mobilizations. For sites not under AECOM's contract (all properties already transferred) USACE will compile and provide the well maps. This action item will be split into two pieces to reflect separate USACE and AECOM responsibilities to prepare well location maps and coordinate tables that will include all existing monitoring wells at Longhorn.

- Update LUC Management Plan by end of fiscal year. **Pending.** Because no LUCs were recorded during FY2013, Army proposed the LUC Management Plan be updated through addition of a one-page document approval notice stating no changes have been made to the plan for the FY 2013. The MMM group in attendence concurred with Army's proposed action. LUCs for LHAAP-46 and other sites recently moved into the RAO phase will be recorded in FY 2014 and will be captured in the FY 2014 plan update to be performed during the first quarter of FY 2015.

EPA

TCEQ

AEC

Defense Environmental Restoration Program (DERP) PBR Update AECOM

- Upcoming document submissions to regulators (see Document and Issue Tracking table)

Item 1(5-Year Review Report) – Response to TCEQ comments planned for submittal to the agency by September 26th. EPA comments are pending.

Item 2 (SOPs) – Response to TCEQ comments planned for submittal to the agency by September 27th. Mr. Mayer stated that EPA comments may be provided next week.

Item 3 (IWWP, QAPP, and HASP) – Due to other priorities within the document review workload, the due date for comments on these documents will be pushed back to October 11th. Dr. Zeiler, Ms. Palmie and Mr. Mayer concurred that delay of review of these documents does not pose a significant problem given that the previous documents are in place for use until these revisions are reviewed and finalized.

Item 4 (LHAAP-18/24 – Explanation of Significant Differences) – Air monitoring data for May 21st through August 19th was submitted on September 19th. Dr. Zeiler asked AECOM for advanced warning and prior discussion if any future situation occurs where a large amount of backlogged data must be released.

The group discussed changing frequency of air monitoring from weekly to monthly, given that a year of weekly data showing Texas air standards are being met has been collected. Frequency of air monitoring is not addressed in the ESD, in order to provide maximum flexibility as conditions change. Dr. Zeiler stated that frequency of monitoring is probably best handled through discussion within the Managers' group to obtain concurrence from the agencies on any changes. Ms. Palmie and Mr. Mayer concurred with a change to monthly sampling, with the caveat that the operating conditions of the plant remain the same as that over the last year when the air data was collected.

Army will develop a letter to the agencies describing the proposed monitoring frequency change from weekly to monthly that:

-Provides basis of change from weekly to monthly sampling as the data collected over the last year;

-States that monthly data will be presented in the quarterly GWTP reports, but that an email notification will be made after each sampling event (but before the subsequent sampling event) to indicate 1) that data from that sampling event has been reviewed and 2) whether results did or did not exceed concentration limits;

-Describes a contingency plan for confirmation sampling if initial sampling indicates air limits have been exceeded; and,

-States that frequency of monitoring is subject to change based on plant operating conditions, sampling results and a change in load.

Army legal has provided comments on the draft ESD. Those comments will be incorporated and the draft document submitted to the agencies for review.

Item 5 (GWTP Quarterly Report) – As requested by Ms. Palmie, air monitoring data will be included in the quarterly reports beginning with the Q3 2013 report.

Hard copies of the Q4 2012 and Q1 2013 final reports have been mailed. Responses to TCEQ's comments on the Q2 2013 draft report are being developed. EPA comments on the Q2 2013 report are pending.

Mr. Becher and Ms. Palmie stated that they have not received any hard copies of the quarterly reports since the Q4 2012 report. Ms. Palmie stated that hard copies and comprehensive support data must be provided to allow review of especially the draft documents. Dr. Zeiler suggested, and Ms. Palmie agreed, that the current document distribution table be provided to the agencies for review to ensure their recipients and format preferences are correctly noted.

Item 6 (LHAAP-46 and LHAAP-67 RACRs) – RACR reports in progress. Preliminary LUC boundary maps will be prepared and submitted to stakeholders for review. Ms. McDonnell stated that LUC surveys for these sites and others (LHAAP-35B(37), LHAAP-50 and LHAAP-35A(58) should be prepared and ready for recording by the December/January RAB. Current ROD language says the LUC must be recorded within 90 days of the completion report. Dr. Zeiler noted that resolution of the dispute may change deadlines for recordation.

Item 7 (Monthly Managers' Meeting) – Action item review from last meeting indicates the following outstanding items:

-Develop map of new wells to submit to stakeholders – Pending. Discussed during Action Item review.

-Data Validation Technical Memo. Pending. Validation reports for perimeter and surface water data should be submitted to USACE as an attachment to an explanatory technical memo, and then added to the Administrative Record.

-Draft boundaries for LHAAP-46 and LHAAP-67 LUCs for stakeholder review – Pending. Discussed during Action Item review.

Item 8 (LHAAP-37, 50 and 58) – Ms. McDonnell provided an update on the progress of field work. All well drilling and development work has been completed for these sites as of September 23rd and that crew has demobilized from the site. An AECOM crew has been on site since yesterday

conducting the initial EISB injection event at LHAAP-58. Three injection locations were completed yesterday without issues, and that work is project to continue until Thursday.

Items 9, 10 and 11 (LHAAP–29 PSI WP, LHAAP-17 PDI WP, LHAAP-16 RD WP) – Placeholders for documents in Army review.

Item 12 (LHAAP-18/24 Data Gap Report) – TCEQ comments were received on August 29th. EPA comments were received on September 23rd, making October 23rd the new date for Army to submit the Draft Final Data Gap Report. However, the number of EPA comments may require Army to request an extension.

Item 13 (LHAAP-03 Record of Decision) – On September 23rd, EPA requested a 30-day extension of the comment resolution period, making our revised due date October 23rd. Army is preparing RTCs for comments resolved during the conference call last week. Ms. Palmie expressed her disappointment that LHAAP-03 was pulled into the dispute and that the work at this site will also be delayed.

Item 14 (October RAB) - Scheduled for October 29th at 6pm. Dr. Zeiler has inquired with the RAB members regarding the status of their potential new members. She received two replies (Charles Dixon and Carol Fortune), but has not heard back from the RAB co-chair, Mr. Fortune. Dr. Zeiler will send another email during the first week in October to attempt again to get feedback from Mr. Fortune. Mr. Mayer stated that he will not be attending the meeting, but Mr. Torcoletti and Mr. Becher will be present.

Item 15 (GWTP O&M / Air Monitoring) – Discussed air monitoring under Items 4 and 5. While FBR feeding is being evaluated for optimization, the metals precipitation process is also being optimized.

Item 16 (Administrative Record Update) – 2nd quarter 2012 Administrative Record update is planned for submittal to agencies by the end of the month.

Item 17 (BERA Field Work) – The BERA contractor will initiate field work by the middle of October. They plan to be in the field for two weeks.

Item 18 (BERA Addendum) – The BERA Addendum is planned for submittal to the agencies in December, pending results of field activities.

Item 19 (Nutrient Issue for Harrison Bayou and INF Pond) – Placeholder for reporting to take place later this Fall.

Item 20 (LHAAP-18/24 Revised Feasibility Study) – EPA comments on the Draft Data Gap Report received September 23rd, so October 23rd marks the end of the 30-day response period. Given the number of EPA comments, it is likely that an extension of the comment response period will be requested, resulting in the Data Gap Report being finalized later than expected, which will push back the schedule for the Draft Revised Feasibility Study. Also discussed under Item 12.

Item 21 (LUC Management Plan) – Discussed Under Action Item review.

Item 22 (CRP) – EPA responses to CLI comments were received today. Army's goal is to have the document finalized before the next RAB.

- Upcoming field work – Discussed under Items 8 and 17
- Monthly data
- Technical Memorandum for surface water and perimeter well data – Ms. McDonnell stated that this document is in progress. Discussed in Item 7 above and in Action Item review.
- Quarterly reports – Discussed in Item 5, above.
- Groundwater Treatment Plant – All items discussed earlier in the meeting.
    - Air Monitoring – Discussed in Item 4, above.
    - INF Pond Topsoil and erosion control status – additional seed has been placed in some areas and watering is being conducted to facilitate growth
    - GWTP Longer-Term Plan – Discussed in Item 15 above
    - Sprinkling of Treated Water – Ms. Palmie made a comment regarding AECOM's statement that returning treated water to the surface through sprinkling is beneficial to help flush contaminants from the vadose zone, allowing for capture through the extraction system. Sprinkling is currently used only when discharge to Harrison Bayou is not possible, but in light of AECOM's comment, TCEQ would like Army to consider whether using sprinkling more extensively would be beneficial, especially now that we have done the data gap study and know where our contaminants are and how the containment system is performing.

Other DERA Program Update **Army**

- Status of Supplemental BERA – Discussed in Items 17-18, above.
- Five Year Review Report Update – Discussed in Item 1, above.

MMRP Update **Army**

- Update – no update

Other Environmental Restoration **Army**

- Decision Documents for multiple sites – status update – Waiting on resolution of LHAAP-19, which will be discussed on September 25th.
- Site 37 Bioplug – Agency comments on the draft report have been submitted to Mr. Fabian at APG.
- 1,4-dioxane sampling at Longhorn – Mr. Mayer will be compiling EPA chemist and lab comments regarding analysis and will submit to the group.

Programmatic Issues **RMZ/RM/AP**

- Status of Dispute – no update

USFWS Update **RMZ/PB**

- Environmental Restoration Issues with Transfer Schedule Impact – Dr. Zeiler has provided information on the property transfer process to Brad Sargent in the USFWS Division of Realty office in Albuquerque.
- USFWS Comments on Documents – no comments

Schedule Next Managers' Meeting – Will be held at the LHAAP Army Trailer on October 29th at 12PM. Those not attending in person will attend by teleconference.

Adjourn

New Action Items

AECOM

- Develop a letter responsive to stated aspects of modifications to the GWTP air sampling plan. Provide basis of change from weekly to monthly sampling. State that monthly data will be presented in the quarterly GWTP reports, but that an email notification will be made monthly (before the subsequent sampling event) to indicate that data has been reviewed and provide a summary of the results. Describe a contingency plan for confirmation sampling if initial sampling indicates air limits have been exceeded.
- Provide the document distribution table to MMM participants for review to ensure recipients and format preferences are correctly noted.
- Provide USFWS with maps of well coordinates for existing and new wells at all sites under AECOM's contract.
- Include all GWTP air monitoring data in quarterly reports, starting with the Q3 2013 report.
- Evaluate/consider whether surface application of treated groundwater should be implemented at a higher rate to encourage flushing of contaminants.

ARMY

- Provide USFWS with maps of well coordinates for wells at all sites that have been transferred to USFWS and are not under AECOM's contract.

EPA

- Provide summarized EPA chemist comments on 1,4-dioxane analyses.

Re: Draft Final 2014 Remedial Action Operation Report for LHAAP-12, Landfill 12
Longhorn Army Ammunition Plant, Karnack, Texas

Dear Mr. Mayer,

The above-referenced document is being transmitted to you for your records and includes revisions based upon your comments on the Draft. In accordance with the FFA, the Draft Final will be considered Final after 30 days without further comment.

The document was prepared by AECOM on behalf of the Army as part of AECOM's Performance Based Remediation contract for the facility. I ask that Mark Heaston, AECOM's Project Manager, be copied on any communications related to the project.

The point of contact for this action is the undersigned. I may be contacted at 479-635-0110, or by email at rose.m.zeiler.civ@mail.mil.

Sincerely,

Rose M. Zeiler

Responses to Comments on
Draft 2014 Remedial Action Operation Report for Site LHAAP-12, Landfill 12
Longhorn Army Ammunition Plant, Karnack, Texas

June 2015

Reviewer: Richard Mayer, EPA

Respondent: Mark Heaston, AECOM

1. Respondent Concurs (C), Does Not Concur (D), Takes Exception (E), or Delete (X).
2. Commentor Agrees (A) with response, or Does not Agree (D) with response.

Comment #	Page	Section/ Paragraph	Comment	C, D, E or X[1]	Response	A or D[2]
1		General	The report should include a contingency plan/pathway for determining whether monitoring well 12WW24 needs to be replaced (due to the bailing of the well). While the EPA recognizes that the well has been sampled the past two years, the DO and ORP data was not valid. These are some key data to support the MNA evaluation at the Site. Hopefully, the recent rains this year may make this decision pathway mute.	D	The first two years of sampling for site 12 were conducted quarterly and included natural attenuation parameters to evaluate both primary and secondary lines of evidence. The results of the first two years of quarterly sampling documented that degradation is occurring at the site. The remedy for the site has achieved OPS. In accordance with the RD, geochemical parameters are no longer sampled and the subsequent annual reports focus on trend analysis for the primary COCs. The bailing technique does not affect VOC (primary COC) results, therefore a contingency plan to replace 12WW24 is not required. With the rain quantities received since April 2015, it is expected that adequate water will be present in the well for low-flow sampling to be used in the future and for representative ORP and DO parameters to be collected, rendering the comment moot.

Comment #	Page	Section/ Paragraph	Comment	C, D, E or X[1]	Response	A or D[2]
2	2-3	Section 2	As recommended in the EPA comments on the 2012 and 2013 RAO Report, the Army should be performing more robust statistical analyses of these data to support MNA evaluation. A concentration-time plot by itself, such as presented in Figure 2-3, is only one piece of multiple lines of evidence needed to demonstrate MNA. The Report does not include other lines of evidence. The sample taken in January 2015 from well 12WW24 was the second highest concentration of TCE measured since December of 2006 and the second consecutive increase. EPA recommends using the following Guidance: An Approach for Evaluating the Progress of Natural Attenuation in Groundwater, EPA 600-R11/204, December 2011/www.epa.gov/ada.	E	Agree with EPA that a plot of concentration of time is not sufficient on its own. The concentrations were subjected to Mann-Kendall trend analysis with and without the last two data points. The Mann-Kendall was conducted using EPA Pro UCL ver 5.0.0. The analysis indicated a significant decrease in TCE concentration in 12WW24 has occurred through June 2011. However, due to the drought condition and the change in seasonal sampling which has seen an increase in TCE concentration in this well in the last two sampling events, the Mann-Kendall statistics did not show a significant decreasing trend although a general decreasing trend was observed. The Mann-Kendall information is introduced as Appendix G. As stated in response to comment #1 above, in accordance with the RD, geochemical parameters are no longer sampled and the subsequent annual reports focus on trend analysis for the primary COCs.	
3	Table 2-4	Section 2	Please include the sampling results for January 2015 in this Table.	C	January 2015 results were added to Table 2-4.	
4	Page 2-2	1st Paragraph	What is the current projected time for the cleanup of TCE (in the groundwater) to the MCL?	C	Based on all the data and using a first order decay rate, the projected time for TCE to reach the MCL is estimated at 250 years. Without the last two data points (i.e., between 2006 and 2011), the projected time to reach the MCL is estimated at 15 years. The drought conditions along with changes in seasonal sampling have constrained the trend observed between 2006 and 2011. Additional data will be evaluated under normal weather conditions to confirm projected estimates regarding time frame to cleanup.

Comment #	Page	Section/ Paragraph	Comment	C, D, E or X[1]	Response	A or D[2]
5	Figure 2-4	Section 2	Please include boring 12WW25 on the Figure and take off the "NS" symbol from the Notes.	C	Changes made to Figure 2-4 as indicated.	
6	Page 3-1	3rd Paragraph	The EPA notes that the groundwater sampling results from temporary boring 12WW25 indicate that the COCs detected are below MCLs; however, the question is: are these results indicative of a plume that is decreasing/degrading or a plume that is migrating laterally to the east from contaminated well 12WW24?	E	This is indicative of an extremely small plume with no evidence of migration. All parties agreed that due the limited size of the plume an additional well installed less than 50 feet from 12WW24 was not practical.	
7	Page 3-1	Last Paragraph	So if monitoring well 12WW22 is only monitored once every five years, what well will be used as a background well for the annual monitoring?	E	The intended objective for 12WW22, per the RD Groundwater Sampling Plan, is to meet the RAO for preventing TCE contaminated groundwater from migrating into nearby surface water. No background well was required in the sampling plan.

Comment #	Page	Section/ Paragraph	Comment	C, D, E or X[1]	Response	A or D[2]
8		General	As has been repeatedly expressed in EPA comments on other documents, the DO and ORP measurements presented in the Monitoring Well Sample Collection Forms (Appendix C) are notable, and the EPA questions some of the data. Please consider:			
			• Is it realistic to have DO concentrations of 0 in shallow groundwater at any location, especially those located outside of the plume (where anaerobic reductive dechlorination is not supposed to be occurring)? This is the case at monitoring wells 12WW23 and 12WW21.	C	Zero DO readings in clean well in shallow zone aquifers may not be representative of aquifer conditions as levels above zero would be expected. Non-impacted wells should generally reflect natural aerobic aquifer conditions.	
			• While the EPA recognizes that low water levels necessitated sampling of 12WW24 by bailing, the DO and ORP values are clearly not representative of a plume where anaerobic reductive dechlorination is purported to be occurring. This undoubtedly is a function of the sampling method. These are key data to support the MNA evaluation. If a well is bailed, do not take DO or ORP values, as they are not representative of the aquifer.	C	ORP and DO data from bailed wells will not be used.	
			• Monitoring well 12WW22 had very low DO readings and negative ORP readings (except for the first reading). This well is located hydraulically upgradient and is located over a 1000 feet from contaminated well 12WW24. Are these readings correct?	C	Previous sampling events have provided similar results for 12WW22 and while the results could be considered contradictory, literature indicates it is possible to have a positive DO value and a negative ORP value. Based on this information, we believe the readings are correct.

2. Commentor Agrees (A) with response, or Does not Agree (D) with response.

Comment #	Page	Section/ Paragraph	Comment	C, D, E or X[1]	Response	A or D[2]
1	2-1	Section 2.1	First bullet of O&M activities says desiccation cracks, erosion, or gullying will be repaired upon observance. Why wasn't the 18" subsidence area repaired? Please repair this and any subsidence areas upon observation.	C	Concur with comment. A portion of the subsidence area has been repaired by backfilling eroded area with top soil and adding matting to enhance grass growth. A load of top soil is under order and will be used to patch the other two small subsidence areas.	
2	2-3	Section 2.2	States: Water samples were collected using the low-flow method Standard Operating Procedure (AECOM, 2013). According to the field notes, 12WW24 was bailed dry and sampled after recovery. This should be in the narrative. Please revise to reflect well was bailed and explain why. [I copied/pasted this comment from last report comments - this is consistently misstated]	C	Revised text to indicate that monitoring well 12WW24 was bailed because of insufficient water in the well to support low-flow sampling.	
3	2-3	Section 2.2	Last paragraph – I concur with EPA's comment (comment 2) regarding lack of evidence to support MNA. It will continue to be difficult to conduct trend analysis based on one plume data point.	C	See response to EPA's Comment #2. Because 12WW24 is the only well with CoCs above the MCL, it is the only well of interest. The attempt to install a second well within the plume on September 8, 2014 included the installation of a boring and collection of a grab groundwater sample. The results of the grab groundwater sample were barely detectable levels of COCs TCE (0.317 ug/L) and cis-1,2-DCE (0.402 ug/L) which indicated that the plume is extremely small. All parties agreed that due the limited size of the plume an additional well installed less than 50 feet from 12WW24 was not practical.	
4	Table 2-4	Section 2	Add January 2015 TCE results. You could change title to "Cumulative" rather than "Historic"	C	Added January 2015 TCE concentration and changed title to "Cumulative".

5	3-1	Section 3	Third paragraph – Extra period in the paragraph before "Limited". Last paragraph – If 12WW22 sampling is reduced to once per five years, what well serves as background well?	C E	Removed extra period. The intended objective for 12WW22, per the RD Groundwater Sampling Plan, is to meet the RAO for preventing TCE contaminated groundwater from migrating into nearby surface water. No background well was required in the sampling plan.

Subject: FW: EPAs Approval of the Draft Final 2014 Remedial Action Operation Report for Longhorn Site 12 (Plus the RTCs)

Rose, EPA approves the Draft Final 2014 Remedial Action Operation Report for Longhorn Site 12. Below are EPA's Responses to the Army RTCs on the Draft 2014 Remedial Action Operation Report.

1. Concur; however, the Army takes a risk by relying only on the concentration levels for the COCs in determining whether MNA is occurring. For TCE, the 2006 concentration was 404 ug/l at 12WW24. In January of 2015, the concentration level for TCE was 353 ug/l, a 17% decrease. Also, only time will indicate whether 12WW24 will need to be replaced.

2. Concur, the Mann-Kendall information was added.

3. Concur, January 2015 results were added.

4. Concur.

5. Concur, changes were made to Figure 2-4.

6. Concur.

7. Concur.

8. Concur.

Subject: FOR AGENCY REVIEW- LHAAP-12 Draft Final RAO Report

Good Evening April and Rich,

Please find attached transmittal letters for the Draft Final LHAAP-12 2014 RAO Report. Due to large file size, the subject document, transmitted under cover of the attached letters, will be transmitted to you via SendFiles. You should receive the SendFiles notification shortly. I have also included the Draft RTC tables and a Redline of the Draft text to make tracking of the changes easier.

1 INTRODUCTION

The United States (U.S.) Army Corps of Engineers, Tulsa District, contracted AECOM Technical Services, Inc. (AECOM), to perform remedial activities at multiple sites at the former Longhorn Army Ammunition Plant (LHAAP), Karnack, Texas, under the Huntsville District's Worldwide Environmental Restoration Services Contract Number (No.) W912DY-09-D-0059, Task Order No. DS01. As part of this contract, AECOM is performing operations and maintenance and monitoring activities at the closed Landfill 12 (LHAAP-12). A Final Record of Decision (ROD) was executed for LHAAP-12 in August, 2006 (Shaw, 2006). Groundwater monitoring and site inspection activities at LHAAP-12 are ongoing as described in the Final Remedial Design (RD) Addendum (Shaw, 2007). This report summarizes the results of January 2015 groundwater sampling and the November 2014 landfill integrity inspections and repairs.

1.1 Remedial Action Operation Scope and Objective

Work completed as part of the Remedial Action Operation (RA[O]) at LHAAP-12 consisted of the following components: physical inspections and repairs; monthly water level measurements of current wells; MNA evaluation; and groundwater monitoring. Physical inspections are conducted at a minimum annually to confirm compliance with Land Use Control (LUC) objectives, which consist of ensuring the integrity of the existing landfill cover, and ensuring no consumption of trichloroethene (TCE)-contaminated groundwater. Monthly groundwater levels have been measured at site 12 since October 2014 to assess optimum sampling dates to avoid dry wells. This activity was recommended for a year. The objectives of groundwater monitoring at LHAAP-12 are to ensure that contaminated groundwater does not migrate into nearby surface water and to perform Monitored Natural Attenuation (MNA) so that maximum contaminant levels (MCLs) are achieved for groundwater contaminants of concern (COCs): TCE, cis-1,2-dichloroethene (cis-1,2-DCE), and vinyl chloride (VC). The remedy at Site 12 is functioning as intended and all human risks are currently under control. This report summarizes the results of groundwater sampling and the landfill integrity inspections and repairs.

1.2 Site Description

LHAAP-12 was established in 1963, covers approximately seven acres, and is 500 feet southeast of Central Creek, which eventually drains into Caddo Lake. LHAAP-12 was used for the disposal of industrial solid wastes, possibly containing small quantities of hazardous constituents generated at LHAAP. From 1978 until its closure in April 1994, the landfill was used continuously for the disposal of non-hazardous industrial solid waste, including cafeteria waste, chemical waste, petroleum-contaminated soil, and asbestos. The construction of a landfill cap over the site was completed in 1998 as part of an Interim Remedial Action (IRA). The IRA is consistent with U.S. Environmental Protection Agency presumptive remedy guidance. The final remedy for LHAAP-12 is protective of human health and the environment and consists of LUCs in conjunction with MNA. LUCs include those set in place by the ROD (Shaw, 2006) for landfill cap maintenance and restriction of groundwater use.

2 OPERATIONS AND MAINTENANCE ACTIVITIES AT LHAAP-12

Physical inspection activities at LHAAP-12 consist of:

- Maintenance of the integrity of the landfill cap and repairs to desiccation cracks, erosion, or gullying upon observance.
- Maintenance of the vegetative cover on the landfill cap, including periodic mowing.
- Maintenance of the signage around landfill cap.
- Prohibition of any activities that would affect the integrity of the cap.
- Prohibition of any activities that would cause exposure to contaminated groundwater.

The RD Addendum stipulated physical inspections to be conducted annually, although actual inspections are conducted more frequently with daily drive-by oversight to ensure compliance with the above requirements and annual groundwater sampling to monitor the effectiveness of MNA in reducing contaminant concentrations over time. The effectiveness of MNA was evaluated in the Years 1 and 2 report (Shaw, 2011). Groundwater was included as a component of the remedy for LHAAP-12 identified in the ROD (Shaw, 2006).

2.1 Physical Inspection Summary

Inspections conducted on 21 November 2014 indicated that minimal repairs were needed. The vegetative cover was observed to be in good condition and well-maintained through routine mowing. No evidence of subsidence that was repaired by AECOM conducted during 2013 was observed. A single small area of subsidence, separate from the 2013 repaired area, approximately 18" in depth was observed along the western edge of the landfill. Inspections conducted during 2014 indicated that no repairs to the cap were needed, and the area of subsidence will be observed to ensure the landfill cap cover continues to cover landfill contents. Six separate locations of surface erosion that were observed during the November 2013 inspection, and were addressed through re-seeding, were found to be in good condition during the 2014 inspection. No excessive cracking or desiccation was observed.

A tree was observed down along the fence line at the south west corner of the landfill, and was removed during the inspection. Signage remains in good condition and the fencing is intact (See Photo Log, **Appendix A**). Well-head locks continue to be in good condition. No damage to bollards, pads, or protective casings was observed, and no encroachment of weeds or brush on the well pads was observed. (See Photo Log, **Appendix A**). No change in land or groundwater use was observed at the site and the use of the site is consistent with that mandated by the ROD (SHAW, 2006). No significant issues were identified regarding the cap condition or maintenance, signs, or site use.

The official 2014 physical inspection of the LHAAP-12 cap was completed November 21, 2014. The LUC Inspection and Maintenance Log is included in **Appendix B**.

2.2 Groundwater Monitoring and Analytical Results

As described by the Groundwater Sampling Plan included in the RD Addendum (Shaw, 2007), groundwater sampling of monitoring wells (12WW20, 12WW21, and 12WW24) and compliance monitoring wells (12WW22 and 12WW23), has been conducted annually beginning in the third

year of the RA(O). The Purpose of the sampling was to develop data to support the effectiveness of MNA in reducing contaminant concentrations over time, to evaluate plume migration, and to ensure that TCE-contaminated groundwater does not impact nearby surface water. The locations of these groundwater monitoring wells are shown in **Figure 2-1**. During the 2015 sampling event, all five wells were in good condition and no evidence of turbidity or silt accumulation was identified.

A DPT boring was installed on September 8th, 2014 at the proposed LHAAP-12 new well 12WW25 location (50 feet down-gradient/east of plume well 12WW24) to guide well installation. The field log for 12WW25 and the memorandum for installation of an additional well are presented in **Appendix C**. The boring was drilled to a depth of 35 feet, with visibly wet soils encountered starting at 25 feet below ground surface (bgs) and an assemblage of sands from 15 – 30 feet bgs. A grab groundwater sample was collected from this boring to confirm its location within the plume. Analytical results identified low levels of COCs TCE (0.317 micrograms per liter [ug/L]) and cis-1,2-DCE (0.402 ug/L) below the MCL, along with similar levels of methylene chloride, benzene, chlorobenzene and 1,4-dichlorobenzene.

The proposed 12WW25 location is not within the plume above the clean-up criteria observed at 12WW24, so a permanent monitoring well will not be installed. This approach was discussed between the Army, EPA, and TCEQ with EPA and TCEQ providing concurrence via email September 17, 2014 and September 18, 2014, respectively. As discussed, a plume this limited in size does not justify the installation of additional wells; however, monthly groundwater level monitoring will be completed for a year in order to assess optimum sampling dates to avoid dry wells. Twelve (12) consecutive monthly groundwater levels for the eight (8) site wells began in October 2014 and the first seven (7) gauging events are presented in Table 2-1. The collected data show consistent trends in water levels with increase in groundwater level observed since measurements began in October 2014. The average increase in water level over the period between October 2014 and March 2015 is 0.66 feet to 3.57 feet with the highest elevation increase occurring in 12WW22, the most upgradient well, and the lowest occurring in 12WW23, the most downgradient well. None of the wells were dry. Because there is no change in the groundwater flow direction between 2013 and 2014 as depicted in **Figure 2-2**, the MNA network of well continues to represent site conditions and no change is recommended. This is corroborated with monthly potentiometric plots of the groundwater levels in the eight (8) wells that were collected between October 2014 and March 2015. The potentiometric plots are presented in **Appendix D** and indicate that the groundwater flow is primarily to the east with occasional slight shift to the northeast and/or southeast. The addition of gauging data from wells 12WW01, 12WW02, and 12WW05 did not change the understanding of groundwater flow at the site even though groundwater levels have increased between 0.66 and 3.57 feet over this time period. Based on the groundwater flow direction which is primarily to the east, the network of wells monitored while appear to be adequate, could be optimized. For example monitoring well 12WW22 is an upgradient well at a great distance from the landfill. This well has historically been sampled to ensure the plume is not migrating to the creek, however based on groundwater flow direction and considering there has been no detections in this well to date, sampling this well can be reduced from annually to once every five years. Additionally, monitoring well 12WW23 located downgradient and farther downgradient from the landfill relative to 12WW21 which remains unimpacted, does not provide additional information to understanding site

conditions. It is recommended to remove well 12WW23 from the network of monitored wells. Wells 12WW22 and 12WW23 will continue to be included in well gauging events.

Groundwater flow direction interpretation shows as south easterly flow, slightly changing from an easterly flow the previous year. The 2013 and 2014 groundwater elevation measurements are within historic range. Year 6 and 7 (i.e., 2013 and 2014) elevation data are plotted on **Figure 2-2**. Groundwater elevation data can be found on **Table 2-2**.

Annual samples were collected January 9, 2015 from wells 12WW20, 12WW21, 12WW22, 12WW23, and 12WW24 and were analyzed for volatile organic compounds (VOCs). Sampling was not conducted in December 2014 due to scheduling conflicts in the field. Analytical results for the samples are shown in **Table 2-3**. Historic COC concentrations for LHAAP-12 wells are shown in **Table 2-4**.

Water samples were collected using the low-flow method Standard Operating Procedure (AECOM, 2013) for wells 12WW20, 12WW21, 12WW22, and 12WW23. Monitoring well 12WW24 was bailed dry and sampled after recovery because of insufficient water in the well to support low-flow sampling. The objective of using this method was to collect representative samples of the groundwater in the formation adjacent to the well screen, eliminating the mixing of stagnant water above and below the well screen. After water quality parameters stabilized and were within acceptable ranges, samples were collected at the same low flow rate. Groundwater monitoring well sampling forms were completed for each monitoring well sampled and are included in **Appendix E**. Laboratory analytical results are included in **Appendix F**.

The MNA evaluation completed as part of the Five-Year Review (AECOM, 2014), concluded that TCE degradation was occurring via anaerobic reductive dechlorination. Although an increasing trend in TCE has been observed over the past two years (see **Figure 2-3** for 12WW24), the trend appears due to seasonal effect because both samples were collected in the winter season (December 2013 and January 2015). The groundwater elevation presented on **Figure 2-3** indicated an inverse correlation with constituent concentrations (-44% for TCE, -53% for cis-1,2-DCE, and -34% for VC), noting that these correlations do not account for natural attenuation mechanisms. Groundwater COC concentrations can be found on **Table 2-2** and seen on **Figure 2-4**.

Statistical analysis of the concentration profile for TCE in 12WW24 using Mann-Kendall for trend was completed. The analysis was completed using EPA Pro UCL ver 5.0.0. The results shown in **Appendix G** indicate that a significant decrease in TCE concentration in 12WW24 has occurred through June 2011. However, due to the drought condition as evidenced by the dry well in December 2012 and the increase in TCE concentration in this well in the last two sampling events, the Mann-Kendall statistics did not show a significant decreasing trend although a general decreasing trend was observed. These results provide evidence that natural attenuation is occurring at this site, resulting in a decrease in TCE concentration in groundwater.

The concentration profile for TCE in 12WW24 shown in **Figure 2-3** was used to calculate a first order decay rate. The determination was made for the dataset through June 2011 and for the dataset that included the December 2013 and January 2015 results. This was conducted because drought conditions evidenced by the dry well in December 2012 were later manifested by an increase in TCE concentration in this well in the last two sampling events. The first order rate constant for the period through June 2011 was 6.2E-04 per day while the first order rate constant

for the entire dataset was 4.6E-05 per day, an implied decrease of just over one order of magnitude. Based on these rate constants, the estimated durations to achieve the MCL for TCE in 12WW24 are 15 years using the dataset through June 2011 and 255 years using the entire dataset. The drought conditions along with changes in seasonal sampling have constrained the trend observed between 2006 and 2011. Additional data will be evaluated under normal weather conditions to confirm projected estimates regarding time frame to cleanup

Blue Highlighting Indicates Analyte Detected Above MCL/MSC.

B - Blank contamination: The analyte was found in an associated blank as well as in the sample.

J - Estimated value; analyte concentration was less than the limit of quantification

MCL - maximum contaminant level

MSC - medium specific concentrations

NA - not analyzed

U - Analyte was not detected.

UJ - The analysis was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample. 'UJ' not detects are not definite; the analyte may be present.

µg/L - microgram per liter

Notes:

*	This was a DPT boring grab groundwater sample, no well was subsequently installed.
**	Analyte was diluted 5X
J	estimated result
ND	not detected; values within parentheses denote detection limits

3 CONCLUSIONS

Physical inspections and groundwater monitoring continue to be completed at LHAAP-12 in compliance with the ROD for LHAAP-12 (Shaw, 2006). No damage to bollards, pads, or protective casings was observed, and no encroachment of weeds or brush on the well pads was observed. No change in land or groundwater use has occurred at the site. Inspections conducted indicated that no repairs to the cap were needed, and the area of subsidence will be observed to ensure the landfill cap cover continues to cover landfill contents. No significant issues were identified regarding the cap condition or maintenance, signs, or site use. LUCs were verified, and the use of the site is still consistent with that mandated by the ROD.

In accordance with the Groundwater Sampling Plan, found in Appendix A of the RD Addendum for LHAAP-12 (Shaw, 2007), annual sampling of wells will continue until the next Five-Year Review. Results for Year 7 are documented in this report.

Monitoring well 12WW24 was sampled on January 9, 2015 for VOCs. TCE was detected above its MCL at 353 µg/L. The MCL for TCE is 5 µg/L. Cis-1,2-DCE was detected above its MCL at 70.8. The MCL for cis-1,2-DCE is 70. VOC concentrations in 12WW24 have shown a decreasing trend over the past several years excluding the most recent two years, where TCE and cis-1,2-DCE increased. The past seven (7) months of groundwater level measurements (the March 31, 2015 gauging event represented the month of April) have not shown any significant changes with regards to seasonal variations, although these measurements have only been through the fall and winter cycle. The measurements began October 2014. A proposed location for an additional monitoring well (12WW25) was not installed within the plume at site 12 due to the limited plume size. This DPT point was reviewed with the results showing low levels of COCs (below the MCLs). Limited sampling groundwater elevation data (**Figure 2-3**) indicated a slight inverse correlation between groundwater elevation and concentrations in 12WW24 (average correlation coefficient of -49%). Some seasonal variation was determined to be present in the levels of the COCs over time as the data were collected in variable seasons. The increase in TCE in the last two years is associated with low water level and the samples being collected in the winter season.

Monitoring wells 12WW20, 12WW21, 12WW22, and 12WW23 were sampled on January 9, 2015 for VOCs. No contaminants were detected above their MCLs. Monitoring well 12WW20 had detections for TCE (0.293 J µg/L), but they were not above the MCL/ medium specific concentration.

Based on gauging results of seven (7) consecutive months and analytical data, it is recommended to sample monitoring well 12WW22 once every five years and to eliminate monitoring well 12WW23 from the network of monitored wells. Wells 12WW22 and 12WW23 will continue to be included in well gauging events.

APPENDIX B: LUC INSPECTION AND MAINTENANCE LOG

LUC Inspection and Maintenance Log - LHAAP 12

Date	Inspected by:	Inspection / MaintenanceActivitiesYearly, at a minimum					Corrective action or repairs required?	Repairs / Action Taken
		Protect Landfill Integrity				Prevent Human Exposure to Groundwater		
		Vegetative Cover maintained: i.e. grass mowed at least annually	Fence and signage maintained	Observance of landfill cover degredation -e.g. desiccation cracks, erosion, or gullying	Continued compliance verified for no digging or disturbance of landfill cover or contents	Verified no withdrawl of use of groundwater (other than environmental testing)		
11/21/2014	Wacker, D.	Completed and maintained. Vegetative cover is in good condition. See photos 2 and 4 of the photo log.	Tree down along fence line at SW edge of LF.	No cover degredation observed.	No evidence of animal burrows along north east edge of cap, as seen during the 2013 inspection.	Completed and verified.	Remove tree from fence line at SW edge of LF.	Tree removed from fence line at SW edge of LF during inspection. See photo 1 of the photo log.
11/21/2014	Wacker, D.		Remainder of fencing and signage in good repair.		Small area of subsidence, ~18" deep, along western edge of LF.		No corrective action required.	Continue to observe subsidance, and ensure LF cap continues to cover contents.

MEMORANDUM

DATE: August 18, 2014

PROJECT NAME: Remediation of Multiple Sites, Longhorn Army Ammunition Plant, Karnack, TX

TO:	Rose Zeiler	Site Manager
	Richard Smith	Project Manager
	Aaron Williams	Project Engineer
FROM:	Dave Wacker	AECOM PM, 210-253-7514

SUBJECT: **Installation of New Plume Monitoring Well at LHAAP-12**
Longhorn Army Ammunition Plant, Karnack, TX
(Contract: W912DY-09-D-0059, Task Order DS01)

1 INTRODUCTION

Well 12WW24 is currently the sole well monitoring the shallow groundwater zone plume at LHAAP-12. This well is installed at a relatively shallow depth, resulting in dry well conditions during the 2012 annual Long Term Monitoring (LTM) sampling event.

Per recommendation of the 2012 Five Year Review for the site, installation of an additional plume monitoring well has been evaluated.

2 EVALUATION AND RECOMMENDATIONS

In determining a location with the highest probability of intersecting the plume, historical LHAAP-12 groundwater data was reviewed. Two well locations downgradient from plume well 12WW24 were found to have historical TCE detections. 12WW10 was located approximately 185 feet east of 12WW24. TCE was found in 12WW10 at its highest concentration of 14.5 µg/L in February 2003, but sampling ceased after TCE concentrations declined (1.84 µg/L in February 2004, 6.96 µg/L in December 2004), and the well was abandoned in 2007. 12WW01 located approximately 185 feet southeast of 12WW24 is an existing well that was last sampled in August 2006, but is not sampled under the current LTM plan. The only detection of TCE in this well occurred in 1993 at a concentration of 27 µg/L.

Using these two wells with historical impacts as a downgradient guide, the location proposed for new plume well 12WW25 is located 50 feet east of 12WW24, just south of the line between 12WW24 and 12WW10 (see attached **Figure 1**).

If the plume is not encountered at proposed 12WW25, located only 50 feet downgradient of impacted well 12WW24, this indicates that plume is very limited in extent and does not require a

second well to adequately assess plume conditions. Under this scenario, AECOM instead recommends augmentation of plume well 12WW24 through installation of a deeper shallow zone well at that location. This action will better ensure uninterrupted monitoring of the shallow zone plume even under seasonal or multi-year dry conditions where the water table is lowered, as failure to obtain plume data from 12WW24 due to its shallow installation depth well creates a data gap, complicating on-going trend analysis.

Review of the Final Remedial Design Addendum (Shaw, 2007) indicates well 12WW24 is installed with a total depth of only 26 feet, screened shallowly across the 15.5' – 25.5' below ground surface (bgs) interval. 12WW20, only 100' west-northwest (upgradient), is installed as a shallow zone monitoring well with a greater total depth of 38 feet, and screened deeper across the interval 28' – 38' bgs. 12WW20 maintained nearly 20 feet of water column during even the lowest water table levels observed in 2012.

Given similar lithology at 12WW24 and 12WW20, the additional well will be installed as close as possible to the current 12WW24 location, but with a greater total depth and deeper screened interval, similar to that of 12WW20. Depending upon field conditions, a longer screen length (20-30') may be utilized to prevent a piezometer configuration in the replacement well during non-drought conditions.

Because 12WW24 is currently a functioning monitoring well, containing sufficient water for sampling during the 2013 annual monitoring event, abandonment is not recommended at this time.

3 WELL INSTALLATION PROCEDURES AND REPORTING

Prior to installation of a well at the proposed 12WW25 location, intersection with the plume will be confirmed by installation of a boring, and laboratory analysis of a grab sample from a temporary groundwater sampling point. If intersection with the plume is not confirmed, a well will not be installed at this location.

This monitoring well will be installed in compliance with the Installation-Wide Work Plan in place at the time the work is conducted, and monitored in accordance with the LHAAP-12 Final Remedial Design Addendum (Shaw, 2007).

Installation of this well and analytical data from the initial sampling event will be reported in the 2014 Remedial Action Operation Report.

4 ANTICIPATED SCHEDULE FOR THE PROPOSED WORK

This well is currently planned for installation in August 2014.

1 INTRODUCTION

AECOM reviewed two data packages from Microbac Laboratory Services, Marietta, OH. A DPT sample was collect on September 8, 2014 for confirmation of location in the plume. Groundwater samples were collected January 9, 2015 at Site 12 at Longhorn Army Ammunition Plant (LHAAP), Karnack, Texas. Data were reviewed for conformance to the requirements of the following guidance documents: Automated Data Review by Laboratory Data Consultants (ADR.net), United States Environmental Protection Agency (EPA) Contract Laboratory Program National Functional Guidelines for Inorganic Data Review, (EPA, July 2002), and EPA Contract Laboratory Program National Functional Guidelines for Low Concentration Organic Data Review, (EPA, June 2001).

1.1 Intended Use of Data

The objective of this sampling event for LHAAP-12 is to monitor remedy performance by natural attenuation with land use controls.

Analyses requested included SW8260 – Volatiles by GC/MS.

Table 1 lists completeness by method. Table 2 lists the sample identifications and their associated laboratory identifications. Table 3 lists qualified results with the associated quality control parameter that was exceeded.

1.2 Preservation and Holding Times

Sample identification data were evaluated for agreement with the chain-of-custody (COC). All samples were received in appropriate containers, within the proper temperature range, in good condition, and with the required signatures.

1.3 Calibrations

Initial calibration criteria modification includes RSD< or = to 30%, two compounds allowed up to 40%. If the continuing calibration verification (CCV) compound exceeds 30% drift, the compound is checked in the LCS, if both are outside recovery limits, the compound is rejected, R. If only the CCV exceeds recovery criteria and is less than ± 40% drift, then the compound is qualified J or UJ.

1.3.1 Continuing Calibration Verifications (CCV)

1.3.1.1 SW8260

CCV WG491745-02 has bromomethane at 67.4%, dichlorodifluoromethane at 71%, and trichloroethene at 76.8% in SDG L14090460. The associated DPT sample is non-detect for bromomethane and dichlorodifluoromethane and are UJ qualified. Trichloroethene is J qualified for a trace result.

1.3.2 Blanks

Where contamination by a target analyte of one of the various blanks was found, if the sample result for an associated sample was non-detect or less than 5X (10X for common laboratory contaminants) the analyte concentration in the blank, the corresponding sample result for the

analyte was qualified B. Where the sample result for the affected analyte was greater than 5X the amount in the blank, no qualifier was applied.

1.3.2.1 SW8260

Method blank WG491746-01 has methylene chloride at 0.280 µg/L in SDG L14090460.
Associated DPT sample is B qualified for methylene chloride.

1.3.3 Surrogates

All surrogates are within criteria.

1.3.4 Laboratory Control Sample (LCS)

All LCS are within criteria.

2 DATA USABILITY SUMMARY

The data are usable for the intended purposes of the project. The data quality objectives have been met for the project.

Dallas, TX 75248

Please find enclosed the analytical results for the samples you submitted to Microbac Laboratories. Review and compilation of your report was completed by Microbac's Ohio Valley Division (OVD). If you have any questions, comments, or require further assistance regarding this report, please contact your service representative listed below.

Laboratory Contact:
Kathy Albertson – Team Chemist/Data Specialist
(740) 373-4071
Kathy.Albertson@microbac.com

I certify that all test results meet all of the requirements of the DoD QSM and other applicable contract terms and conditions. Any exceptions are attached to this cover page or addressed in the method narratives presented in the report. All results for soil samples are reported on a 'dry-weight' basis unless specified otherwise. Analytical results for water and wastes are reported on a 'as received' basis unless specified otherwise. A statement of uncertainty for each analysis is available upon request. This laboratory report shall not be reproduced, except in full, without the written approval of Microbac Laboratories, DoD ELAP certification number 2936.01. The reported results are related only to the samples analyzed as received.

This report was certified on September 12 2014

Record of Sample Receipt and Inspection

Comments/Discrepancies

This is the record of the shipment conditions and the inspection records for the samples received and reported as a sample delivery group (SDG). All of the samples were inspected and observed to conform to our receipt policies, except as noted below.

There were no discrepancies.

Discrepancy	Resolution

Coolers

Cooler #	Temperature Gun	Temperature	COC #	Airbill #	Temp Required?
0019519	I	2.0		J2317156500	X

Inspection Checklist

#	Question	Result
1	Were shipping coolers sealed?	Yes
2	Were custody seals intact?	Yes
3	Were cooler temperatures in range of 0-6?	Yes
4	Was ice present?	Yes
5	Were COC's received/information complete/signed and dated?	Yes
6	Were sample containers intact and match COC?	Yes
7	Were sample labels intact and match COC?	Yes
8	Were the correct containers and volumes received?	Yes
9	Were samples received within EPA hold times?	Yes
10	Were correct preservatives used? (water only)	Yes
11	Were pH ranges acceptable? (voa's excluded)	NA
12	Were VOA samples free of headspace (less than 6mm)?	Yes

Laboratory Data Package Cover Page

X	R1	Field chain-of-custody documentation;
X	R2	Sample identification cross-reference;
X	R3	Test reports (analytical data sheets) for each environmental sample that includes: (a) Items consistent with NELAC Chapter 5, (b) dilution factors, (c) preparation methods, (d) cleanup methods, and (e) a.if required for the project, tentatively identified compounds (TICs).
X	R4	Surrogate recovery data including: (a) Calculated recovery (%R), and (b) the laboratory's surrogate QC limits.
X	R5	Test reports/summary forms for blank samples;
X	R6	Test reports/summary forms for laboratory control samples (LCSs) including: (a) LCS spiking amounts, (b) calculated %R for each analyte, and (c) the laboratory's LCS QC limits.
X	R7	Test reports for project matrix spike/matrix spike duplicates (MS/MSDs) including: (a) samples associated with the MS/MSD clearly identified, (b) MS/MSD spiking compounds, (c) concentration of each MS/MSD analyte measured in the parent and spiked samples, (d) calculated %Rs and relative percent differences (RPDs), and (e) the laboratory's MS/MSD QC limits.
X	R8	Laboratory analytical duplicate (if applicable) recovery and precision: (a) the amount of analyte measured in the duplicate, (b) the calculated RPD, and (c) the laboratory's QC limits for analytical duplicates.
X	R9	List of method quantitation limits (MQLs) and detectability check sample results for each analyte for each method and matrix.
X	R10	Other problems or anomalies.

Description	Yes	No	NA	NR	ER#
Chain-of-custody (C-O-C)					
Did samples meet the laboratory's standard conditions of sample acceptability upon receipt?	X				
Were all departures from standard conditions described in an exception report?	X				
Sample and quality control (QC) identification	X				
Are all field sample ID numbers cross-referenced to the laboratory ID numbers?	X				
Are all laboratory ID numbers cross-referenced to the corresponding QC data?	X				
Test reports					
Were all samples prepared and analyzed within holding times?	X				
Other than those results < MQL, were all other raw values bracketed by calibration standards?	X				
Were calculations checked by a peer or supervisor?	X				
Were all analyte identifications checked by a peer or supervisor?	X				
Were sample detection limits reported for all analytes not detected?	X				
Were all results for soil and sediment samples reported on a dry weight basis?	X				
Were % moisture (or solids) reported for all soil and sediment samples?	X				
Were bulk soils/solids samples for volatile analysis extracted with methanol per SW846 Method 5035?			X		
If required for the project, are TICs reported?			X		
Surrogate recovery data					
Were surrogates added prior to extraction?	X				
Were surrogate percent recoveries in all samples within the laboratory QC limits?	X				
Test reports/summary forms for blank samples	X				
Were appropriate type(s) of blanks analyzed?	X				
Were blanks analyzed at the appropriate frequency?	X				
Were method blanks taken through the entire analytical process, including preparation and, if applicable, cleanup procedures?	X				
Were blank concentrations < MQL?	X				
Laboratory control samples (LCS):					
Were all COCs included in the LCS?	X				

Microbac

Texas Risk Reduction Program (TRRP) Checklist

Laboratory Name:	Microbac OVD	**Laboratory Log Number:**	L14090460
Project Name:		**Method:**	8260
Prep Batch Number(s):	491672, 491746	**Reviewer Name:**	Michael Albertson
LRC Date:	2014-09-12 00:00:00		

Was each LCS taken through the entire analytical procedure, including prep and cleanup steps?	X				
Were LCSs analyzed at the required frequency?	X				
Were LCS (and LCSD, if applicable) %Rs within the laboratory QC limits?	X				
Does the detectability check sample data document the laboratory's capability to detect the COCs at the MDL used to calculate the SDLs?	X				
Was the LCSD RPD within QC limits?	X				
Matrix spike (MS) and matrix spike duplicate (MSD) data					
Were the project/method specified analytes included in the MS and MSD?			X		
Were MS/MSD analyzed at the appropriate frequency?			X		
Were MS (and MSD, if applicable) %Rs within the laboratory QC limits?			X		
Were MS/MSD RPDs within laboratory QC limits?			X		
Analytical duplicate data					
Were appropriate analytical duplicates analyzed for each matrix?			X		
Were analytical duplicates analyzed at the appropriate frequency?			X		
Were RPDs or relative standard deviations within the laboratory QC limits?			X		
Method quantitation limits (MQLs):					
Are the MQLs for each method analyte included in the laboratory data package?	X				
Do the MQLs correspond to the concentration of the lowest non-zero calibration standard?	X				
Are unadjusted MQLs and DCSs included in the laboratory data package?	X				
Other problems/anomalies					
Are all known problems/anomalies/special conditions noted in this LRC and ER?	X				
Was applicable and available technology used to lower the SDL to minimize the matrix interference effects on the sample results?	X				
Is the laboratory NELAC-accredited under the Texas Laboratory Accreditation Program for the analytes, matrices and methods associated with this laboratory data package?	X				
Initial calibration (ICAL)					
Were response factors and/or relative response factors for each analyte within QC limits?	X				
Were percent RSDs or correlation coefficient criteria met?	X				

Microbac

LRC Date:	2014-09-12 00:00:00		

Was the number of standards recommended in the method used for all analytes?	X				
Were all points generated between the lowest and highest standard used to calculate the curve?	X				
Are ICAL data available for all instruments used?	X				
Has the initial calibration curve been verified using an appropriate second source standard?	X				
Initial and continuing calibration verification (ICCV and CCV) and continuing calibration blank (CCB):					
Was the CCV analyzed at the method-required frequency?	X				
Were percent differences for each analyte within the method-required QC limits?		X			2
Was the ICAL curve verified for each analyte?		X			1
Was the absolute value of the analyte concentration in the inorganic CCB < MDL?			X		
Mass spectral tuning					
Was the appropriate compound for the method used for tuning?	X				
Were ion abundance data within the method-required QC limits?	X				
Internal standards (IS)					
Were IS area counts and retention times within the method-required QC limits?	X				
Raw data (NELAC Section 5.5.10)					
Were the raw data (for example, chromatograms, spectral data) reviewed by an analyst?	X				
Were data associated with manual integrations flagged on the raw data?	X				
Dual column confirmation					
Did dual column confirmation results meet the method-required QC?			X		
Tentatively identified compounds (TICs)					
If TICs were requested, were the mass spectra and TIC data subject to appropriate checks?			X		
Interference Check Sample (ICS) results					
Were percent recoveries within method QC limits?			X		
Serial dilutions, post digestion spikes, and method of standard additions					
Were percent differences, recoveries, and the linearity within the QC limits specified in the method?			X		
Method detection limit (MDL) studies

Are all the methods used to generate the data documented, verified, and validated, where applicable?	X				
Laboratory standard operating procedures (SOPs)					
Are laboratory SOPs current and on file for each method performed	X				

1. Items identified by the letter “R” must be included in the laboratory data package submitted in the TRRP-required report(s). Items identified by the letter “S” should be retained and made available upon request for the appropriate retention period;

2. O = organic analyses; I = inorganic analyses (and general chemistry, when applicable);

3. NA = Not applicable;

4. NR = Not reviewed;

5. ER# = Exception Report identification number (an Exception Report should be completed for an item if “NR” or “No” is checked).

The Exception Report for each “No” or “Not Reviewed (NR)” item in Laboratory Review Checklist and for each analyte, matrix, and method for which the laboratory does not hold NELAC accreditation under the Texas Laboratory Accreditation Program.

Release Statement: I am responsible for the release of this laboratory data package. This laboratory is NELAC accredited under the Texas Laboratory Accreditation Program for all the methods, analytes, and matrices reported in this data package except as noted in the Exception Reports. The data have been reviewed and are technically compliant with the requirements of the methods used, except where noted by the laboratory in the Exception Reports. By my signature

2.1.1.2 QC Summary Data

Example 8260 Calculations

1.0 Calculating the Response Factor (RF) from the initial calibration (ICAL) data:

RF = [(Ax) (Cis)] / [(Ais) (Cx)]

where:	Example
Ax = Area of the characteristic ion for the compound being measured:	3399156
Cis = Concentration of the specific internal standard (ug/mL)	25
Ais = Area of the characteristic ion of the specific internal standard	846471
Cx = Concentration of the compound in the standard being measured (ug/mL)	100
RF = Calculated Response Factor	**1.0039**

2.0 Calculating the concentration (C) of a compound in water using the average RF: *

Cx = [(Ax) (Cis) (Vn)(D)] / [(Ais) (RF) (Vs)]

where:	**Example**
Ax = Area of the characteristic ion for the compound being measured	**3122498**
Cis = Concentration of the specific internal standard (ug/L)	**25**
D = Dilution factor for sample as a multiplier (10x = 10)	**1**
Ais = Area of the characteristic ion of the specific internal standard	**611048**
RF = Average RF from the ICAL	**1.004**
Vs = Purge volume of sample (mL)	**10**
Vn = Nominal purge volume of sample (mL) (10.0 mL)	**10**
Cx = Concentration of the compound in the sample being measured (ug/L)	**127.2428**

3.0 Calculating the concentration (C) of a compound in soil using the average RF: *

Cx = [(Ax) (Cis) (Wn)(D)] / [(Ais) (RF) (Ws)]

where:	**Example**
Ax = Area of the characteristic ion for the compound being measured	**3122498**
Cis = Concentration of the specific internal standard (ug/L)	**25**
D = Dilution factor for sample as a multiplier (10x = 10)	**1**
Ais = Area of the characteristic ion of the specific internal standard	**611048**
RF = Average RF from the ICAL	**1.004**
Ws = Weight of sample purged (g)	**5**
Wn = Nominal purge weight (g) (5.0 g)	**5**
Cx = Concentration of the compound in the sample being measured (ug/L)	**127.2428**

Dry weight correction:

Percent solids (PCT_S)	**50**
Cd = (Cx) (100)/PCT_S	**254.4856**

* Concentrations appearing on the instrument quantitation reports are on-column results and do not take into account initial volume, final volume, and the dilution factor.

4.0 Concentration from Linear Regression

Step 1: Retrieve Curve Data From Plot, y = mx + b

y = response ratio = response of analyte / response of IS = Ax/Ais

x = amount ratio = concentration analyte/concentration internal standard = Cx / Cis

m = slope from curve = 0.213

b = intercept from curve = - 0.00642

Step 2: Calculate y from Quantitation Report

y = 86550/593147 = 0.1459

Step 3: Solve for x

x = (y - b)/m = [(0.1459 -(- 0.00642)]/ 0.213 = 0.7152

Step 4: Solve for analyte concentration Cx

Cx = Cis (x) = (25.0)(0.7152) = 17.88

Example Spreadsheet Calculation:

Slope from curve, m:	**0.213**
Intercept from curve, b:	**-0.00642**
Area of analyte, Ax:	**86550**
Area of Internal Standard , Ais:	**593147**
Concentration of IS, Cis	**25.00**
Response Ratio:	**0.145917**
Amount Ratio:	**0.715195**
Concentration:	**17.87988**
Units of Internal Standard:	**ug/L**

5.0 Concentration from Quadratic Regression

Step 1 - Retrieve Curve Data from Plot, y = Ax^2 + Bx + C
Where:
Ax^2 + Bx + (C - y) = 0
A, B, C = constants from the ICAL quadratic regression
y = Response ratio = Area of analyte/Area of internal standard (IS)
x = Amount ratio = Concentration of analyte/concentration of IS

Step 2: Calculate y from Quantitation Report

y = Ax/Ais

Step 3: Solve for x using the quadratic formula
Ax^2 + Bx + C - y = 0

$$x = \frac{b \pm \sqrt{\left(b^2 - 4a(c - y)\right)}}{2a}$$ (Two possible solutions)

Step 4: Solve for analyte concentration Cx

Cx = (Cis)(Amount ratio)

Example Spreadsheet Calculation:

Value of A from plot:	**-0.00629**	
Value of B from plot:	**0.511**	
Value of C from plot:	**-0.0276**	
Area of unknown from quantitation report:	**293821**	
Area of IS from quantiation report:	**784848**	
Response ratio, y:	**0.374367**	
C - y:	**-0.40197**	
Root 1 - Computed amount ratio , X1:	**80.44567**	
Root 2 - Computed amount ratio , X2:	**0.794396**	use this solution
Concentration of IS, Cis:	**25.00**	
Concentration of analyte, Cx:	**19.86**	ug/L

Microbac Laboratories Inc.
List of Valid Qualifiers
September 12, 2014

Qualkey: DOD

Qualifier	Description
*	Surrogate or spike compound out of range
+	Correlation coefficient for the MSA is less than 0.995
<	Result is less than the associated numerical value.
>	Greater than
A	See the report narrative
B	The reported result is associated with a contaminated method blank.
B1	Target analyte detected in method blank at or above the method reporting limit
B3	Target analyte detected in calibration blank at or above the method reporting limit
B4	The BOD unseeded dilution water blank exceeded 0.2 mg/L
C	Confirmed by GC/MS
CG	Confluent growth
CT1	The cooler temperature at receipt exceeded regulatory guidelines for requested testing.
DL	Surrogate or spike compound was diluted out
E	Estimated concentration due to sample matrix interference
EDL	Elevated sample reporting limits, presence of non-target analytes
EMPC	Estimated Maximum Possible Concentration
F, S	Estimated result below quantitation limit; method of standard additions(MSA)
F,CT1	Estimated value; the analyte concentration was less than the RL/LOQ. The cooler temperature at receipt exceeded regula
FL	Free Liquid
H1	Sample analysis performed past holding time.
I	Semiquantitative result (out of instrument calibration range)
J	Estimated concentration; sample matrix interference.
J	Estimated value ; the analyte concentration was greater than the highest standard
J	Estimated value ; the analyte concentration was less than the LOQ.
J	The reported result is an estimated value.
J,B	Analyte detected in both the method blank and sample above the MDL.
J,CT1	Estimated value; the analyte concentration was less than the RL/LOQ.
J,CT1	Estimated value; the analyte concentration was less than the RL/LOQ. The cooler temperature at receipt exceeded regula
J,H1	Estimated value ; the analyte concentration was less than the LOQ. Sample analysis performed past holding time.
J,H1	The reported result is an estimated value. Sample was analyzed past holding time.
J,P	Estimate; columns don't agree to within 40%
J,S	Estimated concentration; analyzed by method of standard addition (MSA)
JB	The reported result is an estimated value. The reported result is also associated with a contaminated method blank.
JQ	The reported result is an estimated value and one or more quality control criteria failed. See narrative.
L	Sample reporting limits elevated due to matrix interference
L1	The associated blank spike (LCS) recovery was above the laboratory acceptance limits.
L2	The associated blank spike (LCS) recovery was below the laboratory acceptance limits.
M	Matrix effect; the concentration is an estimate due to matrix effect.
N	Nontarget analyte; the analyte is a tentativlely identified compound (TIC) by GC/MS
NA	Not applicable
ND	Not detected at or above the reporting limit (RL/MDL).
ND, B	Not detected at or above the reporting limit (RL). Analyte present in method blank.
ND, CT1	Analyte was not detected. The concentration is below the reported LOD. The cooler temperature at receipt exceeded reg
ND, H1	Not detected; Sample analysis performed past holding time.
ND, L	Not detected; sample reporting limit (RL) elevated due to interference
ND, S	Not detected; analyzed by method of standard addition (MSA)
NF	Not found by library search
NFL	No free liquid
NI	Non-ignitable
NR	Analyte is not required to be analyzed
NS	Not spiked
P	Concentrations >40% difference between the two GC columns
Q	One or more quality control criteria failed. See narrative.
Q,H1	One or more quality control criteria failed. Sample analyzed past holding time. See narrative.
QNS	Quantity of sample not sufficient to perform analysis
RA	Reanalysis confirms reported results
RE	Reanalysis confirms sample matrix interference
S	Analyzed by method of standard addition (MSA)
SMI	Sample matrix interference on surrogate
SP	Reported results are for spike compounds only
TIC	Library Search Compound
TNTC	Too numerous to count
TNTC, B	Too numerous to count. Analyte present in method blank.
TNTC,CT1	Too numerous to count. The cooler temperature at receipt exceeded regulatory guidelines for requested testing.
TNTC,H1	Too numerous to count. Sample analysis performed past holding time.
U	Analyte was not detected. The concentration is below the reported LOD.
U,H1	Not detected; Sample analysis performed past holding time.

Microbac Laboratories Inc.
List of Valid Qualifiers
September 12, 2014

Qualkey: DOD

UJ	Undetected; the MDL and RL are estimated due to quality control discrepancies.
UQ	Undetected; the analyte was analyzed for, but not detected.
W	Post-digestion spike for furnace AA out of control limits
X	Exceeds regulatory limit
X, S	Exceeds regulatory limit; method of standard additions (MSA)
Z	Cannot be resolved from isomer - see below

NELAP Addendum - May 22, 2014

Non-NELAP LIMS Product and Description

The following is a list of those tests that are not included in the Microbac – OVL NELAP Scope of Accreditation:

Heat of Combustion (BTU)
Total Halide by Bomb Combustion (TX)
Particle Sizing - 200 Mesh (PS200)
Specific Gravity/Density (SPGRAV)
Total Residual Chlorine (CL-TRL)
Total Volatile Solids (all forms) (TVS)
Total Coliform Bacteria (all methods)
Fecal Coliform Bacteria (all methods)
Sulfite (SO3)
Thiodiglycol (TDG-LCMS)
Acetate (HPLC-UV)
Formate (HPLC-UV)
Acetaldehyde (HPLC-UV)
Propionaldehyde (HPLC-UV)
Fluoroborate (ISE)

SOLID AND HAZARDOUS CHEMICALS
Nitrogen, Ammonia by Method 350.1
Chromium, Hexavalent, Leachable by SM3500 Cr-B 2009
Phenolics, Total by Method 420.1

NELAP Accreditation by Laboratory SOP

NONPOTABLE WATER

OVL HPLC02/HPLC-UV

Nitroglycerin
Acetic acid
Butyric acid
Lactic acid
Propionic acid
Pyruvic acid

OVL MSS01/GC-MS

1,4-Phenylenediamine
1-Methylnaphthalene
1,4-Dioxane
Atrazine
Benzaldehyde
Biphenyl
Caprolactam

Hexamethylphosphoramide (HMPA)
Pentachlorobenzene
Pentachloroethane

NELAP Accreditation by Laboratory SOP

NONPOTABLE WATER

OVL MSV0I/GC-MS

1, 1, 2-Trichloro-1,2,2-trifluoroethane
1,3-Butadiene
Cyclohexane
Cyclohexanone
Dimethyl disulfide
Dimethylsulfide
Ethyl-t-butylether (ETBE)
Isoprene
Methylacetate
Methylcyclohexane
T-amylmethylether (TAME)
Tetrahydrofuran (THF)

OVL RSK0I/GC-FID

Isobutane
n-Butane
Propane
Propylene
Propyne

OVL HPLC07/HPLC-MS-MS

Hexamethylphosphoramide (XMPA-LCMS)

SOLID AND HAZARDOUS CHEMICALS

OVL MSS0I/GC-MS

1-Methylnaphthalene
Benzaldehyde
Biphenyl
Caprolactam
Pentachloroethane

NELAP Accreditation by Laboratory SOP

SOLID AND HAZARDOUS CHEMICALS

OVL MSV0I/GC-MS

1.3-Butadiene
Cyclohexane
Cyclohexanone
Dimethyl disulfide
Dimethylsulfide
Ethyl-t-butylether (ETBE)
lsoprene
Methylacetate
Methylcyclohexane
n-Hexane
T-amylmethylether (TAME)

Microbac

Laboratory Report Number: L15010566

Kayla Teague
AECOM Technical Services, Inc.
16000 Dallas Parkway
Dallas, TX 75248

Please find enclosed the analytical results for the samples you submitted to Microbac Laboratories. Review and compilation of your report was completed by Microbac's Ohio Valley Division (OVD). If you have any questions, comments, or require further assistance regarding this report, please contact your service representative listed below.

Laboratory Contact:
Stephanie Mossburg – Team Chemist/Data Specialist
(740) 373-4071
Stephanie.Mossburg@microbac.com

I certify that all test results meet all of the requirements of the DoD QSM and other applicable contract terms and conditions. Any exceptions are attached to this cover page or addressed in the method narratives presented in the report. All results for soil samples are reported on a 'dry-weight' basis unless specified otherwise. Analytical results for water and wastes are reported on a 'as received' basis unless specified otherwise. A statement of uncertainty for each analysis is available upon request. This laboratory report shall not be reproduced, except in full, without the written approval of Microbac Laboratories, DoD ELAP certification number 2936.01. The reported results are related only to the samples analyzed as received.

This report was certified on January 26 2015

Record of Sample Receipt and Inspection

Comments/Discrepancies

This is the record of the shipment conditions and the inspection records for the samples received and reported as a sample delivery group (SDG). All of the samples were inspected and observed to conform to our receipt policies, except as noted below.

There were no discrepancies.

Discrepancy	Resolution

Coolers

Cooler #	Temperature Gun	Temperature	COC #	Airbill #	Temp Required?
0019790	H	3.0		J2317160353	X

Inspection Checklist

#	Question	Result
1	Were shipping coolers sealed?	Yes
2	Were custody seals intact?	Yes
3	Were cooler temperatures in range of 0-6?	Yes
4	Was ice present?	Yes
5	Were COC's received/information complete/signed and dated?	Yes
6	Were sample containers intact and match COC?	Yes
7	Were sample labels intact and match COC?	Yes
8	Were the correct containers and volumes received?	Yes
9	Were samples received within EPA hold times?	Yes
10	Were correct preservatives used? (water only)	Yes
11	Were pH ranges acceptable? (voa's excluded)	NA
12	Were VOA samples free of headspace (less than 6mm)?	Yes

Laboratory Data Package Cover Page

X	R1	Field chain-of-custody documentation;
X	R2	Sample identification cross-reference;
X	R3	Test reports (analytical data sheets) for each environmental sample that includes: (a) Items consistent with NELAC Chapter 5, (b) dilution factors, (c) preparation methods, (d) cleanup methods, and (e) a.if required for the project, tentatively identified compounds (TICs).
X	R4	Surrogate recovery data including: (a) Calculated recovery (%R), and (b) the laboratory's surrogate QC limits.
X	R5	Test reports/summary forms for blank samples;
X	R6	Test reports/summary forms for laboratory control samples (LCSs) including: (a) LCS spiking amounts, (b) calculated %R for each analyte, and (c) the laboratory's LCS QC limits.
X	R7	Test reports for project matrix spike/matrix spike duplicates (MS/MSDs) including: (a) samples associated with the MS/MSD clearly identified, (b) MS/MSD spiking compounds, (c) concentration of each MS/MSD analyte measured in the parent and spiked samples, (d) calculated %Rs and relative percent differences (RPDs), and (e) the laboratory's MS/MSD QC limits.
X	R8	Laboratory analytical duplicate (if applicable) recovery and precision: (a) the amount of analyte measured in the duplicate, (b) the calculated RPD, and (c) the laboratory's QC limits for analytical duplicates.
X	R9	List of method quantitation limits (MQLs) and detectability check sample results for each analyte for each method and matrix.
X	R10	Other problems or anomalies.

Prep Batch Number(s):	508006	**Reviewer Name:**	Michael Albertson
LRC Date:	2015-01-23 00:00:00		

Description	Yes	No	NA	NR	ER#
Chain-of-custody (C-O-C)					
Did samples meet the laboratory's standard conditions of sample acceptability upon receipt?	X				
Were all departures from standard conditions described in an exception report?	X				
Sample and quality control (QC) identification	X				
Are all field sample ID numbers cross-referenced to the laboratory ID numbers?	X				
Are all laboratory ID numbers cross-referenced to the corresponding QC data?	X				
Test reports					
Were all samples prepared and analyzed within holding times?	X				
Other than those results < MQL, were all other raw values bracketed by calibration standards?	X				
Were calculations checked by a peer or supervisor?	X				
Were all analyte identifications checked by a peer or supervisor?	X				
Were sample detection limits reported for all analytes not detected?	X				
Were all results for soil and sediment samples reported on a dry weight basis?	X				
Were % moisture (or solids) reported for all soil and sediment samples?	X				
Were bulk soils/solids samples for volatile analysis extracted with methanol per SW846 Method 5035?			X		
If required for the project, are TICs reported?			X		
Surrogate recovery data					
Were surrogates added prior to extraction?	X				
Were surrogate percent recoveries in all samples within the laboratory QC limits?	X				
Test reports/summary forms for blank samples	X				
Were appropriate type(s) of blanks analyzed?	X				
Were blanks analyzed at the appropriate frequency?	X				
Were method blanks taken through the entire analytical process, including preparation and, if applicable, cleanup procedures?	X				
Were blank concentrations < MQL?	X				
Laboratory control samples (LCS):					
Were all COCs included in the LCS?	X				

Microbac

Texas Risk Reduction Program (TRRP) Checklist

Laboratory Name:	Microbac OVD	**Laboratory Log Number:**	L15010566
Project Name:		**Method:**	8260
Prep Batch Number(s):	508006	**Reviewer Name:**	Michael Albertson
LRC Date:	2015-01-23 00:00:00		

Was each LCS taken through the entire analytical procedure, including prep and cleanup steps?	X				
Were LCSs analyzed at the required frequency?	X				
Were LCS (and LCSD, if applicable) %Rs within the laboratory QC limits?	X				
Does the detectability check sample data document the laboratory's capability to detect the COCs at the MDL used to calculate the SDLs?	X				
Was the LCSD RPD within QC limits?			X		
Matrix spike (MS) and matrix spike duplicate (MSD) data					
Were the project/method specified analytes included in the MS and MSD?			X		
Were MS/MSD analyzed at the appropriate frequency?			X		
Were MS (and MSD, if applicable) %Rs within the laboratory QC limits?			X		
Were MS/MSD RPDs within laboratory QC limits?			X		
Analytical duplicate data					
Were appropriate analytical duplicates analyzed for each matrix?			X		
Were analytical duplicates analyzed at the appropriate frequency?			X		
Were RPDs or relative standard deviations within the laboratory QC limits?			X		
Method quantitation limits (MQLs):					
Are the MQLs for each method analyte included in the laboratory data package?	X				
Do the MQLs correspond to the concentration of the lowest non-zero calibration standard?	X				
Are unadjusted MQLs and DCSs included in the laboratory data package?	X				
Other problems/anomalies					
Are all known problems/anomalies/special conditions noted in this LRC and ER?	X				
Was applicable and available technology used to lower the SDL to minimize the matrix interference effects on the sample results?	X				
Is the laboratory NELAC-accredited under the Texas Laboratory Accreditation Program for the analytes, matrices and methods associated with this laboratory data package?	X				
Initial calibration (ICAL)					
Were response factors and/or relative response factors for each analyte within QC limits?	X				
Were percent RSDs or correlation coefficient criteria met?	X				

Microbac

Texas Risk Reduction Program (TRRP) Checklist

Laboratory Name:	Microbac OVD	**Laboratory Log Number:**	L15010566
Project Name:		**Method:**	8260
Prep Batch Number(s):	508006	**Reviewer Name:**	Michael Albertson
LRC Date:	2015-01-23 00:00:00		

Was the number of standards recommended in the method used for all analytes?	X				
Were all points generated between the lowest and highest standard used to calculate the curve?	X				
Are ICAL data available for all instruments used?	X				
Has the initial calibration curve been verified using an appropriate second source standard?	X				
Initial and continuing calibration verification (ICCV and CCV) and continuing calibration blank (CCB):					
Was the CCV analyzed at the method-required frequency?	X				
Were percent differences for each analyte within the method-required QC limits?	X				
Was the ICAL curve verified for each analyte?		X			1
Was the absolute value of the analyte concentration in the inorganic CCB < MDL?			X		
Mass spectral tuning					
Was the appropriate compound for the method used for tuning?	X				
Were ion abundance data within the method-required QC limits?	X				
Internal standards (IS)					
Were IS area counts and retention times within the method-required QC limits?	X				
Raw data (NELAC Section 5.5.10)					
Were the raw data (for example, chromatograms, spectral data) reviewed by an analyst?	X				
Were data associated with manual integrations flagged on the raw data?	X				
Dual column confirmation					
Did dual column confirmation results meet the method-required QC?			X		
Tentatively identified compounds (TICs)					
If TICs were requested, were the mass spectra and TIC data subject to appropriate checks?			X		
Interference Check Sample (ICS) results					
Were percent recoveries within method QC limits?			X		
Serial dilutions, post digestion spikes, and method of standard additions					
Were percent differences, recoveries, and the linearity within the QC limits specified in the method?			X		
Method detection limit (MDL) studies

Texas Risk Reduction Program (TRRP) Checklist

Laboratory Name:	Microbac OVD	**Laboratory Log Number:**	L15010566
Project Name:		**Method:**	8260
Prep Batch Number(s):	508006	**Reviewer Name:**	Michael Albertson
LRC Date:	2015-01-23 00:00:00		

Was a MDL study performed for each reported analyte?	X				
Is the MDL either adjusted or supported by the analysis of DCSs?	X				
Proficiency test reports					
Was the laboratory's performance acceptable on the applicable proficiency tests or evaluation studies?	X				
Standards documentation					
Are all standards used in the analyses NIST-traceable or obtained from other appropriate sources?	X				
Compound/analyte identification procedures					
Are the procedures for compound/analyte identification documented?	X				
Demonstration of analyst competency (DOC)					
Was DOC conducted consistent with NELAC Chapter 5?	X				
Is documentation of the analyst's competency up-to-date and on file?	X				
Verification/validation documentation for methods (NELAC Chapter 5)					
Are all the methods used to generate the data documented, verified, and validated, where applicable?	X				
Laboratory standard operating procedures (SOPs)					
Are laboratory SOPs current and on file for each method performed	X				

1. Items identified by the letter “R” must be included in the laboratory data package submitted in the TRRP-required report(s). Items identified by the letter “S” should be retained and made available upon request for the appropriate retention period;

2. O = organic analyses; I = inorganic analyses (and general chemistry, when applicable);

3. NA = Not applicable;

4. NR = Not reviewed;

5. ER# = Exception Report identification number (an Exception Report should be completed for an item if “NR” or “No” is checked).

The Exception Report for each “No” or “Not Reviewed (NR)” item in Laboratory Review Checklist and for each analyte, matrix, and method for which the laboratory does not hold NELAC accreditation under the Texas Laboratory Accreditation Program.

Release Statement: I am responsible for the release of this laboratory data package. This laboratory is NELAC accredited under the Texas Laboratory Accreditation Program for all the methods, analytes, and matrices reported in this data package except as noted in the Exception Reports. The data have been reviewed and are technically compliant with the requirements of the methods used, except where noted by the laboratory in the Exception Reports. By my signature

Texas Risk Reduction Program (TRRP) Checklist

below, I affirm to the best of my knowledge all problems/anomalies observed by the laboratory have been identified in the Laboratory Review Checklist, and no information affecting the quality of the data has been knowingly withheld.

Check, if applicable: [ ] This laboratory meets an exception under 30 TAC §25.6 and was last inspection by [ ] TCEQ or [ ] _____ on **(enter date of last inspection**). Any findings affecting the data in this laboratory data package are noted in the Exception Reports herein. The official signing the cover page of the report in which these data are used is responsible for releasing this data package and is by signature affirming the above release statement is true.

Exceptions Report

1) Dichlorodifluoromethane exceeded the UCL.

2.1.1.2 QC Summary Data

Example 8260 Calculations

1.0 Calculating the Response Factor (RF) from the initial calibration (ICAL) data:

RF = [(Ax) (Cis)] / [(Ais) (Cx)]

where:

	Example
Ax = Area of the characteristic ion for the compound being measured:	3399156
Cis = Concentration of the specific internal standard (ug/mL)	25
Ais = Area of the characteristic ion of the specific internal standard	846471
Cx = Concentration of the compound in the standard being measured (ug/mL)	100
RF = Calculated Response Factor	**1.0039**

2.0 Calculating the concentration (C) of a compound in water using the average RF: *

Cx = [(Ax) (Cis) (Vn)(D)] / [(Ais) (RF) (Vs)]

where:

	Example
Ax = Area of the characteristic ion for the compound being measured	**3122498**
Cis = Concentration of the specific internal standard (ug/L)	**25**
D = Dilution factor for sample as a multiplier (10x = 10)	**1**
Ais = Area of the characteristic ion of the specific internal standard	**611048**
RF = Average RF from the ICAL	**1.004**
Vs = Purge volume of sample (mL)	**10**
Vn = Nominal purge volume of sample (mL) (10.0 mL)	**10**
Cx = Concentration of the compound in the sample being measured (ug/L)	**127.2428**

3.0 Calculating the concentration (C) of a compound in soil using the average RF: *

Cx = [(Ax) (Cis) (Wn)(D)] / [(Ais) (RF) (Ws)]

where:

	Example
Ax = Area of the characteristic ion for the compound being measured	**3122498**
Cis = Concentration of the specific internal standard (ug/L)	**25**
D = Dilution factor for sample as a multiplier (10x = 10)	**1**
Ais = Area of the characteristic ion of the specific internal standard	**611048**
RF = Average RF from the ICAL	**1.004**
Ws = Weight of sample purged (g)	**5**
Wn = Nominal purge weight (g) (5.0 g)	**5**
Cx = Concentration of the compound in the sample being measured (ug/L)	**127.2428**

Dry weight correction:

Percent solids (PCT_S)	**50**
Cd = (Cx) (100)/PCT_S	**254.4856**

* Concentrations appearing on the instrument quantitation reports are on-column results and do not take into account initial volume, final volume, and the dilution factor.

4.0 Concentration from Linear Regression

Step 1: Retrieve Curve Data From Plot, y = mx + b

y = response ratio = response of analyte / response of IS = Ax/Ais

x = amount ratio = concentration analyte/concentration internal standard = Cx / Cis

m = slope from curve = 0.213

b = intercept from curve = - 0.00642

Step 2: Calculate y from Quantitation Report

y = 86550/593147 = 0.1459

Step 3: Solve for x

x = (y - b)/m = [(0.1459 -(- 0.00642)]/ 0.213 = 0.7152

Step 4: Solve for analyte concentration Cx

Cx = Cis (x) = (25.0)(0.7152) = 17.88

Example Spreadsheet Calculation:

Slope from curve, m:	**0.213**
Intercept from curve, b:	**-0.00642**
Area of analyte, Ax:	**86550**
Area of Internal Standard , Ais:	**593147**
Concentration of IS, Cis	**25.00**
Response Ratio:	**0.145917**
Amount Ratio:	**0.715195**
Concentration:	**17.87988**
Units of Internal Standard:	**ug/L**

5.0 Concentration from Quadratic Regression

Step 1 - Retrieve Curve Data from Plot, y = Ax^2 + Bx + C
Where:
Ax^2 + Bx + (C - y) = 0
A, B, C = constants from the ICAL quadratic regression
y = Response ratio = Area of analyte/Area of internal standard (IS)
x = Amount ratio = Concentration of analyte/concentration of IS

Step 2: Calculate y from Quantitation Report

y = Ax/Ais

Step 3: Solve for x using the quadratic formula
Ax^2 + Bx + C - y = 0

$$x = \frac{b \pm \sqrt{\left(b^2 - 4a(c - y)\right)}}{2a}$$ (Two possible solutions)

Step 4: Solve for analyte concentration Cx

Cx = (Cis)(Amount ratio)

Example Spreadsheet Calculation:

Value of A from plot:	**-0.00629**	
Value of B from plot:	**0.511**	
Value of C from plot:	**-0.0276**	
Area of unknown from quantitation report:	**293821**	
Area of IS from quantiation report:	**784848**	
Response ratio, y:	**0.374367**	
C - y:	**-0.40197**	
Root 1 - Computed amount ratio , X1:	**80.44567**	
Root 2 - Computed amount ratio , X2:	**0.794396**	use this solution
Concentration of IS, Cis:	**25.00**	
Concentration of analyte, Cx:	**19.86**	ug/L

Microbac Laboratories Inc.
List of Valid Qualifiers
January 26, 2015

Qualkey: DOD

Qualifier	Description
*	Surrogate or spike compound out of range
+	Correlation coefficient for the MSA is less than 0.995
<	Result is less than the associated numerical value.
>	Greater than
A	See the report narrative
B	The reported result is associated with a contaminated method blank.
B1	Target analyte detected in method blank at or above the method reporting limit
B3	Target analyte detected in calibration blank at or above the method reporting limit
B4	The BOD unseeded dilution water blank exceeded 0.2 mg/L
C	Confirmed by GC/MS
CG	Confluent growth
CT1	The cooler temperature at receipt exceeded regulatory guidelines for requested testing.
DL	Surrogate or spike compound was diluted out
E	Estimated concentration due to sample matrix interference
EDL	Elevated sample reporting limits, presence of non-target analytes
EMPC	Estimated Maximum Possible Concentration
F, S	Estimated result below quantitation limit; method of standard additions(MSA)
F,CT1	Estimated value; the analyte concentration was less than the RL/LOQ. The cooler temperature at receipt exceeded regula
FL	Free Liquid
H1	Sample analysis performed past holding time.
H1,CT1	Sample analysis performed past holding time. The cooler temperature at receipt exceeded regulatory guidelines for reque
I	Semiquantitative result (out of instrument calibration range)
J	Estimated concentration; sample matrix interference.
J	Estimated value ; the analyte concentration was greater than the highest standard
J	Estimated value ; the analyte concentration was less than the LOQ.
J	The reported result is an estimated value.
J,B	Analyte detected in both the method blank and sample above the MDL.
J,CT1	Estimated value; the analyte concentration was less than the RL/LOQ.
J,CT1	Estimated value; the analyte concentration was less than the RL/LOQ. The cooler temperature at receipt exceeded regula
J,H1	Estimated value ; the analyte concentration was less than the LOQ. Sample analysis performed past holding time.
J,H1	The reported result is an estimated value. Sample was analyzed past holding time.
J,P	Estimate; columns don't agree to within 40%
J,S	Estimated concentration; analyzed by method of standard addition (MSA)
JB	The reported result is an estimated value. The reported result is also associated with a contaminated method blank.
JQ	The reported result is an estimated value and one or more quality control criteria failed. See narrative.
L	Sample reporting limits elevated due to matrix interference
L1	The associated blank spike (LCS) recovery was above the laboratory acceptance limits.
L2	The associated blank spike (LCS) recovery was below the laboratory acceptance limits.
M	Matrix effect; the concentration is an estimate due to matrix effect.
N	Nontarget analyte; the analyte is a tentativlely identified compound (TIC) by GC/MS
NA	Not applicable
ND	Not detected at or above the reporting limit (RL/MDL).
ND, B	Not detected at or above the reporting limit (RL). Analyte present in method blank.
ND, CT1	Analyte was not detected. The concentration is below the reported LOD. The cooler temperature at receipt exceeded reg
ND, L	Not detected; sample reporting limit (RL) elevated due to interference
ND, S	Not detected; analyzed by method of standard addition (MSA)
ND,H1	Not detected; Sample analysis performed past holding time.
ND,H1,CT1	Not detected; Sample analysis performed past holding time. The cooler temperature at receipt exceeded regulatory guide
NF	Not found by library search
NFL	No free liquid
NI	Non-ignitable
NR	Analyte is not required to be analyzed
NS	Not spiked
P	Concentrations >40% difference between the two GC columns
Q	One or more quality control criteria failed. See narrative.
Q,H1	One or more quality control criteria failed. Sample analyzed past holding time. See narrative.
QNS	Quantity of sample not sufficient to perform analysis
RA	Reanalysis confirms reported results
RE	Reanalysis confirms sample matrix interference
S	Analyzed by method of standard addition (MSA)
SMI	Sample matrix interference on surrogate
SP	Reported results are for spike compounds only
TIC	Library Search Compound
TNTC	Too numerous to count
TNTC, B	Too numerous to count. Analyte present in method blank.
TNTC,CT1	Too numerous to count. The cooler temperature at receipt exceeded regulatory guidelines for requested testing.
TNTC,H1	Too numerous to count. Sample analysis performed past holding time.

Microbac Laboratories Inc.
List of Valid Qualifiers
January 26, 2015

Qualkey: DOD

U	Analyte was not detected. The concentration is below the reported LOD.
U,H1	Not detected; Sample analysis performed past holding time.
UJ	Undetected; the MDL and RL are estimated due to quality control discrepancies.
UQ	Undetected; the analyte was analyzed for, but not detected.
W	Post-digestion spike for furnace AA out of control limits
X	Exceeds regulatory limit
X, S	Exceeds regulatory limit; method of standard additions (MSA)
Z	Cannot be resolved from isomer - see below

NELAP Addendum - May 22, 2014

Non-NELAP LIMS Product and Description

The following is a list of those tests that are not included in the Microbac – OVL NELAP Scope of Accreditation:

Heat of Combustion (BTU)
Total Halide by Bomb Combustion (TX)
Particle Sizing - 200 Mesh (PS200)
Specific Gravity/Density (SPGRAV)
Total Residual Chlorine (CL-TRL)
Total Volatile Solids (all forms) (TVS)
Total Coliform Bacteria (all methods)
Fecal Coliform Bacteria (all methods)
Sulfite (SO3)
Thiodiglycol (TDG-LCMS)
Acetate (HPLC-UV)
Formate (HPLC-UV)
Acetaldehyde (HPLC-UV)
Propionaldehyde (HPLC-UV)
Fluoroborate (ISE)

SOLID AND HAZARDOUS CHEMICALS
Nitrogen, Ammonia by Method 350.1
Chromium, Hexavalent, Leachable by SM3500 Cr-B 2009
Phenolics, Total by Method 420.1

NELAP Accreditation by Laboratory SOP

NONPOTABLE WATER

OVL HPLC02/HPLC-UV

Nitroglycerin
Acetic acid
Butyric acid
Lactic acid
Propionic acid
Pyruvic acid

OVL MSS01/GC-MS

1,4-Phenylenediamine
1-Methylnaphthalene
1,4-Dioxane
Atrazine
Benzaldehyde
Biphenyl
Caprolactam

Hexamethylphosphoramide (HMPA)
Pentachlorobenzene
Pentachloroethane

NELAP Accreditation by Laboratory SOP

NONPOTABLE WATER

OVL MSV0I/GC-MS

1, 1, 2-Trichloro-1,2,2-trifluoroethane
1,3-Butadiene
Cyclohexane
Cyclohexanone
Dimethyl disulfide
Dimethylsulfide
Ethyl-t-butylether (ETBE)
Isoprene
Methylacetate
Methylcyclohexane
T-amylmethylether (TAME)
Tetrahydrofuran (THF)

OVL RSKOI/GC-FID

Isobutane
n-Butane
Propane
Propylene
Propyne

OVL HPLC07/HPLC-MS-MS

Hexamethylphosphoramide (XMPA-LCMS)

SOLID AND HAZARDOUS CHEMICALS

OVL MSS0I/GC-MS

1-Methylnaphthalene
Benzaldehyde
Biphenyl
Caprolactam
Pentachloroethane

NELAP Accreditation by Laboratory SOP

SOLID AND HAZARDOUS CHEMICALS

OVL MSV0I/GC-MS

1.3-Butadiene
Cyclohexane
Cyclohexanone
Dimethyl disulfide
Dimethylsulfide
Ethyl-t-butylether (ETBE)
Isoprene
Methylacetate
Methylcyclohexane
n-Hexane
T-amylmethylether (TAME)

Re: Draft Final 2016 Remedial Action Operation Report for Landfill 12 (LHAAP-12) at Longhorn Army Ammunition Plant, Karnack, Texas

Dear Mr. Mayer,

The above-referenced document is being transmitted to you for your records and includes revisions based upon your comments on the Draft. In accordance with the FFA, the Draft Final will be considered Final after 30 days without further comment.

The document was prepared by AECOM on behalf of the Army as part of AECOM's Performance Based Remediation contract for the facility. I ask that Elspeth Sharp, AECOM's Project Manager, be copied on any communications related to the project.

The point of contact for this action is the undersigned. I may be contacted at 479-635-0110, or by email at rose.m.zeiler.civ@mail.mil.

Sincerely,

Rose M. Zeiler

Clarification of Responses to Comments on
Draft 2016 Remedial Action Operation Report, Landfill 12 (LHAAP-12)
Longhorn Army Ammunition Plant, Karnack, Texas

August 2017

Reviewer: Richard Mayer, EPA

Respondent: Elspeth Sharp, Robert Shoemaker, AECOM

1. Respondent Concurs (C), Does Not Concur (D), Takes Exception (E), or Delete (X).
2. Commentor Agrees (A) with response, or Does not Agree (D) with response.

Comment #	Page	Section/ Paragraph	Comment	C, D, E or X[1]	Response	A or D[2]
1		General	1,4-dioxane should be added as a site contaminant (and monitored) since it has been detected above the TCEQ TRRP PCL of 9.1 ug/L on two sampling events in monitoring well 12WW24.	E	Comment noted, but not applicable here by the terms of the dispute. The following clarification of Army's response was requested by TCEQ (July 25, 2017 email) and by EPA (verbally during the July 27, 2017 Managers' Meeting). LHAAP-12 has been in the RAO phase since September 2007 in accordance with the approved ROD and RD. In response to a decrease in the promulgated standard, Site 12 groundwater was sampled for 1,4-dioxane. Results were below the GW-Ind MSC, but above the GW-Res MSC. In accordance with DoD Policy Memorandum, 22 Aug 2016 "Revised Site Management Procedures – Update to DoD Manual 4715.20" on procedures for addressing emerging contaminants at DERP sites, the Army will continue to sample for 1,4-dioxane during 5 year reviews however, the ROD and remedy will not be amended until it is shown that the emerging contaminant presents an unacceptable risk. The current land use control plan, which prevents the use of groundwater at the site and the current land use of the site, indicates that the remedy remains protective, despite contamination levels of 1, 4-dioxane above MSC-res levels.

Attachments: LHAAP-12 Draft 2016 RAO Clarification of RTCs_EPA_080317.pdf

Bob, The clarification response is acceptable since the contamination is currently found in only one well and the site will be sampled for 1,4-dioxane to ensure that it is not migrating and that levels are not increasing. EPA also agrees that the remedy (MNA) is not affected by the presence of 1,4-dioxane in monitoring well 12WW24 at this time.

1 INTRODUCTION

The United States (U.S.) Army Corps of Engineers, Tulsa District, contracted AECOM Technical Services, Inc. (AECOM), to perform remedial activities at multiple sites at the former Longhorn Army Ammunition Plant (LHAAP), Karnack, Texas, under the Huntsville District's Worldwide Environmental Restoration Services Contract Number (No.) W912DY-09-D-0059, Task Order No. DS01. AECOM is performing operations and maintenance and monitoring activities at the closed Landfill 12 (LHAAP-12). A Final Record of Decision (ROD) was executed for LHAAP-12 in August 2006 (Shaw, 2006). Groundwater monitoring and site inspection activities at LHAAP-12 are ongoing as described in the Final Remedial Design (RD) Addendum (Shaw, 2007). LHAAP-12 was transferred to the United States Fish and Wildlife Services (USFWS) as part of the Caddo Lake National Wildlife Refuge (CLNWR) in 2014. This report summarizes the results of November/December 2016 groundwater sampling and the July 2016 landfill integrity inspections and repairs.

1.1 Remedial Action Operation Scope and Objective

Work completed in 2016 as part of the Remedial Action Operation (RA[O]) at LHAAP-12 consisted of the following components: physical inspections and repairs; groundwater monitoring; and concentration trend analysis. Physical inspections are conducted at a minimum annually to confirm compliance with Land Use Control (LUC) objectives, which consist of ensuring the integrity of the existing landfill cover, and ensuring no exposure of trichloroethene (TCE)-contaminated groundwater. Monthly groundwater levels have previously been measured at LHAAP-12 between October 2014 and November 2015 to assess optimum sampling dates to avoid dry wells. The objectives for groundwater monitoring at LHAAP-12 are to provide groundwater data to;

- Determine the effectiveness of natural attenuation in reducing contaminant concentrations over time,
- Evaluate plume migration to ensure that TCE-contaminated groundwater does not impact nearby surface water,
- Perform trend analysis of groundwater contaminants of concern (COCs): TCE, cis-1,2-dichloroethene (cis-1,2-DCE), and vinyl chloride (VC), and
- Perform a comparison of the COC concentration trends to their maximum contaminant levels (MCLs).

The remedy at LHAAP-12 is functioning as intended and all human risks are currently under control. This report summarizes the results of groundwater sampling and the landfill integrity inspections and repairs.

1.2 Site Description

LHAAP-12 was established in 1963, covers approximately seven acres, and is 500 feet southeast of Central Creek, which eventually drains into Caddo Lake. LHAAP-12 was used for the disposal of industrial solid wastes, possibly containing small quantities of hazardous constituents generated at LHAAP. From 1978 until its closure in April 1994, the landfill was used continuously for the disposal of non-hazardous industrial solid waste, including cafeteria waste,

chemical waste, petroleum-contaminated soil, and asbestos. The construction of a landfill cap over the site was completed in 1998 as part of an Interim Remedial Action (IRA). The IRA is consistent with U.S. Environmental Protection Agency presumptive remedy guidance. The final remedy for LHAAP-12 is protective of human health and the environment and consists of LUCs in conjunction with monitored natural attenuation (MNA). LUCs include those set in place by the ROD (Shaw, 2006) for landfill cap maintenance and restriction of groundwater use.

2 OPERATIONS AND MAINTENANCE ACTIVITIES AT LHAAP-12

Operation, maintenance and physical inspection activities at LHAAP-12 consist of:

- Maintenance of the integrity of the landfill cap and repairs to desiccation cracks, erosion, or gullying upon observance.
- Maintenance of the vegetative cover on the landfill cap, including periodic mowing.
- Maintenance of the signage around the landfill cap.
- Prohibition of any activities that would affect the integrity of the cap.
- Prohibition of any activities that would cause exposure to contaminated groundwater.

Inspections of the well field are conducted during the sampling event and the information recorded on well inspection forms (**Appendix A**). Maintenance or repairs are then conducted based on observed conditions.

Mowing the sampling area for brush and weeds is conducted on a routine basis and as needed to access the well field. Mowing activities are conducted more frequently during the warmer spring and summer months and less frequently during the colder fall and winter seasons.

The RD Addendum stipulated physical inspections to be conducted annually, although actual inspections are conducted more frequently with periodic drive-by oversight to ensure compliance with the above requirements and annual groundwater sampling to monitor the effectiveness of natural attenuation in reducing contaminant concentrations over time. The effectiveness of MNA was evaluated in the Years 1 and 2 reports (Shaw, 2011). Groundwater was included as a component of the remedy for LHAAP-12 identified in the ROD (Shaw, 2006).

2.1 Physical Inspection Summary

In February 2016, it was observed that the erosion areas at the southeast corner and on the east side of the sloped area of the landfill that were repaired on July 30, 2015 needed some additional repair; the erosion matting was still in place, but some of the new fill had eroded and vegetation had not become established. Additional fill and seeding were added to the two erosion areas on May 27, 2016.

Other than the erosion areas mentioned above, the vegetative cover was observed to be in good condition and well-maintained during routine mowing. No excessive cracking or desiccation cracks were observed.

The official 2016 physical inspection of the LHAAP-12 cap was completed on July 29, 2016 and the LUC Inspection and Maintenance Log is included in **Appendix B**. During the July 2016 inspection, the landfill appeared to be in good condition. The vegetation had become established at the two areas of erosion, no further erosion was evident, and signage remained in good condition. The two subsidence areas on the landfill cap that were repaired on July 30, 2015 were in good condition and no evidence of animal burrowing in the cap was found. No change in land or groundwater use was observed at the site and the use of the site is consistent with the LUCs mandated by the ROD (Shaw, 2006). No other significant issues were identified regarding the cap condition or maintenance, signs, or site use.

During the well inspections performed on December 1, 2016, a broken hinge was noted for well 12WW05. The hinge has not yet been repaired but will be as part of a forthcoming installation-wide well repair and maintenance effort. No other damage to bollards, pads, or protective casings was observed, and minimal encroachment of weeds or brush on the well pads was observed. Well-head locks continue to be in good condition. The well inspection forms and photos are provided in **Appendix A**.

2.2 Groundwater Monitoring and Analytical Results

As described by the Groundwater Sampling Plan included in the RD Addendum (Shaw, 2007), groundwater sampling of monitoring wells (12WW20, 12WW21, and 12WW24) and compliance monitoring wells (12WW22 and 12WW23), has been conducted annually beginning in the third year of the RA(O) (i.e., 2010). The purpose of the sampling was to develop data to support the effectiveness of natural attenuation in reducing contaminant concentrations over time, to evaluate plume migration, and to ensure that TCE-contaminated groundwater does not impact nearby surface water. The locations of these groundwater monitoring wells are shown in **Figure 2-1**. In the 2014 RA(O) report (AECOM, 2015), recommendations were made to reduce the frequency of sampling of monitoring well 12WW22 to once every five years and to eliminate collection of samples from monitoring well 12WW23. However due to oversight, these two wells were sampled during the November/December 2016 sampling event along with wells 12WW20, 12WW21, and 12WW24. All monitoring wells with the exception of well 12WW05 were in good condition and no evidence of turbidity or silt accumulation was identified. As mentioned in Section 2.1, well 12WW05 had a broken hinge.

Fifteen (15) consecutive groundwater level measurements for the eight (8) site wells (12WW01, 12WW02, 12WW05, and 12WW20 through 12WW24) were conducted between October 2014 and November 2015. The groundwater gauging on a monthly basis was conducted to determine if there was any variance in the groundwater flow direction due to seasonal changes. Groundwater trends from the gauging events are presented and discussed in the 2014 RA(O) report (AECOM, 2015) and the 2015 RA(O) report (AECOM, 2016).

The groundwater gauging data collected from the eight (8) site wells revealed groundwater elevations increasing since measurements began in October 2014 through June or July 2015 followed by subsequent and consistent decrease until November 2015. The monthly groundwater gradient maps in the 2014 RA(O) report (AECOM, 2015) and 2015 RA(O) report (AECOM, 2016) indicate that the groundwater flow is primarily interpreted to the east and northeast with occasional slight shift to the southeast. The shift in groundwater flow to the southeast is correlated with increases in groundwater elevation; flow is primarily to the east and northeast when the groundwater elevation is low but to the southeast when the groundwater elevation is high. When the monthly gauging began in October 2014, groundwater flow was to the east-northeast and this continued through December 2014. As groundwater elevations continued to rise, the flow shifted to the southeast starting in January 2015 and continuing through July 2015. From August 2015 through November 2015 the groundwater flow returned to the northeast as the groundwater elevations decreased.

Groundwater potentiometric surfaces from the December 18 and 19, 2015 sampling event (2015 RA(O)) and November 30/December 1, 2016 sampling event (2016 RA(O)) are presented in **Table 2-1** and depicted in **Figure 2-2.** Groundwater elevation was an average of 0.96 feet higher

in December 2016 than in December 2015. The groundwater flow direction was to the east in December 2015 with a hydraulic gradient of 0.0040 feet per foot (ft/ft). By December 2016 the flow direction had shifted to the east-northeast and had a relatively flat hydraulic gradient of 0.006 ft/ft.

Annual groundwater samples were collected on November 30, 2016 from 12WW24 and on December 1, 2016 from wells 12WW20, 12WW21, 12WW22, and 12WW23 and were analyzed for volatile organic compounds (VOCs) according to SW-846 Method 8260. Among the detected compounds in monitoring well 12WW24, only TCE exceeded its respective MCL of 5 micrograms per liter (µg/L). No VOCs were detected in monitoring wells 12WW20, 12WW21, 12WW22, and 12WW23. Analytical results for the samples are shown in **Table 2-2**. Historical TCE concentrations for LHAAP-12 wells are shown in **Table 2-3**.

Groundwater samples were collected using the low-flow method following Standard Operating Procedure (AECOM, 2013) for wells 12WW20 through 12WW23. Monitoring well 12WW24 was bailed dry and sampled after recovery because of insufficient water in the well to support low-flow sampling. The objective of using low-flow sampling method is to collect representative samples of the groundwater in the formation adjacent to the well screen, eliminating the mixing of stagnant water above and below the well screen. After water quality parameters stabilized and were within acceptable ranges, samples were collected at the same low flow rate. Groundwater monitoring well sampling forms were completed for each monitoring well sampled and are included in **Appendix C**. Laboratory analytical results are included in **Appendix D**.

The MNA evaluation completed as part of the Five-Year Review (AECOM, 2014), concluded that TCE degradation was occurring via anaerobic reductive dechlorination. Although an increasing trend in TCE concentration was observed in well 12WW24 in December 2013 and January 2015, a decreasing trend has been observed over the past two sampling events, December 2015 and December 2016 (see **Figure 2-3** for 12WW24). TCE concentration trends appear to correlate with fluctuating water levels because samples collected when the water table is high tend to have lower TCE concentrations. The groundwater elevation presented on **Figure 2-3** indicates an inverse correlation with constituent concentrations (-49% for TCE, -58% for cis-1,2-DCE, and -44% for VC), although it should be noted that these correlations do not account for natural attenuation mechanisms. The presence of cis-1,2-DCE and VC indicates that degradation by anaerobic reductive dechlorination is occurring. However, the concentration trends for these degradation products mimic those of TCE, suggesting that dilution and dispersion is the dominant natural attenuation pathway. Groundwater COC concentrations for all wells can be found in **Table 2-3** and seen on **Figure 2-4**.

Statistical analysis of the concentration profile for TCE in 12WW24 using the Mann-Kendall trend test was completed using EPA ProUCL version 5.0.0. The results are shown in **Appendix E.** The Mann-Kendall trend test was first performed for the 2014 RA(O) report using data from the beginning of the monitoring program in December 2006 through June 2011 (AECOM, 2015), and indicated that a statistically significant decrease in TCE concentration in 12WW24 occurred through June 2011. A drought persisted between 2011 and 2012 and resulted in decreased groundwater levels and well 12WW24 going dry and not being sampled in 2012. However, after 12WW24 recovered from being dry, TCE concentrations increased during the December 2013 and January 2015 sampling events, before declining during the December 2015 and December

2016 sampling events. As a result, the current Mann-Kendall trend test in **Appendix E** does not show a statistically significant decreasing trend, despite water levels recovering and declining TCE concentrations in December 2015 and December 2016. An overall decreasing trend is apparent when looking at the regression line, but the current data set does not support a significantly decreasing trend at the 95% confidence level. Additional annual sampling is necessary until the next five year review when the trends will be evaluated for statistical significance. However, these results combined with the lack of detected VOCs in the downgradient wells provide evidence that the plume is stable and natural attenuation is occurring, resulting in an overall decrease in TCE concentration in groundwater over time. The presence of cis-1,2-DCE and VC in this well since December 2006 also indicates that biodegradation has been occurring.

The concentration profile for TCE in 12WW24 shown in **Figure 2-3** was used to calculate a first order decay rate. Two calculations have been made; the first for the dataset through June 2011 and the second for the dataset that includes all results through December 2016. The reason for the two calculations is because drought conditions evidenced by the dry well in December 2012 later manifested in an increase in TCE concentration in this well in the December 2013, and January 2015 sampling events. However, the water levels have been increasing since the well was dry in December 2012 and an overall decrease in TCE concentration has also been observed. The first order rate constant for the period through June 2011 was 6.2E-04 per day while the first order rate constant for the entire dataset was 2.7E-04 per day, an implied decrease of less than one order of magnitude. Based on these rate constants, the estimated durations to achieve the MCL for TCE in 12WW24 are 15 years using the rate constant for the dataset through June 2011 and approximately 43 years using the rate constant for the entire dataset. The drought conditions along with changes in seasonal sampling have constrained the trends observed.

Blue highlighting indicates concentrations above the MCL/PCL

J - Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.

MCL - Maximum Contaminant Level

PCL – Texas Risk Reduction Program (TRRP) Tier 1 Groundwater Residential Protective Concentration Level

U - Undetected: The analyte was analyzed for, but not detected.

UJ - The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

ug/L - micrograms per liter

Notes:

*	This was a DPT boring grab groundwater sample, no well was subsequently installed.
**	Analyte was diluted 5X
J	estimated result
ND	not detected; values within parentheses denote detection limits
NS	not sampled
DPT	direct push test
μg/L	micrograms per liter

3 CONCLUSIONS

Physical inspections and groundwater monitoring continue to be completed at LHAAP-12 in compliance with the ROD for LHAAP-12 (Shaw, 2006). A broken hinge was reported for well 12WW05 during the December 2016 well inspections, which will be repaired as part of a forthcoming installation-wide well repair and maintenance effort. No other damage to bollards, pads, or protective casings was observed, and limited encroachment of weeds or brush on the well pads was observed. No change in land or groundwater use has occurred at the site. Landfill observations in February 2016 identified additional needed repair to the two areas of erosion on the southeast corner and east side of the sloped area of the landfill cap. Additional repair was done to these erosion areas on May 27, 2016. No additional issues were identified during the official 2016 physical inspection of the LHAAP-12 cap completed on July 29, 2016. LUCs were verified, and the use of the site is still consistent with that mandated by the ROD.

In accordance with the Groundwater Sampling Plan, found in Appendix A of the RD Addendum for LHAAP-12 (Shaw, 2007), annual sampling of wells will continue until the next Five-Year Review. Results for Year 9 are documented in this report.

Monitoring well 12WW24 was sampled on November 30, 2016 for VOCs. TCE was detected above its MCL of 5 µg/L at 151 µg/L. This was a decrease from the December 2015 TCE concentration of 278 µg/L. None of the other detected compounds exceeded their respective MCLs. TCE concentrations in 12WW24 showed a statistically significant decreasing trend between 2006 and 2011 with a subsequent increase between December 2013 and January 2015. TCE data from the past two sampling events (December 2015 and November 2016) show a decreasing trend since January 2015.

When compared to VOC concentrations, the groundwater elevation data (**Figure 2-3**) exhibits an inverse correlation with VOC concentrations in 12WW24. The increase in TCE in the December 2013 and January 2015 sampling events in 12WW24 is thought to be associated with low water levels and sampling during drought conditions, as these were the first samples collected since the well was dry due to drought conditions in 2012. Water levels have continued to increase since the drought, and the TCE concentration from the November 30, 2016 sampling has decreased back to pre-drought concentrations.

Monitoring wells 12WW20, 12WW21, 12WW22, and 12WW23 were sampled on December 1, 2016 for VOCs. No VOCs were detected in these four monitoring wells.

The results of the monthly groundwater gauging between April 2015 and November 2015 and summarized in the 2015 RA(O) report (AECOM, 2016) indicate that 12WW22, which was changed into a 5-year sampling cycle, could be considered a downgradient well during the late summer and fall months of a wet year (2015) in addition to being the well that monitors impacts to surface water (i.e., Central Creek). Sampled well 12WW20, which is an upgradient well to 12WW22, is unimpacted. Considering that well 12WW22 has always been unimpacted and based on its great distance from the landfill, the 5-year frequency of sampling of well 12WW22 remains adequate for this well. Similarly, even though the groundwater flow direction changed between the spring season and the summer/fall seasons of 2015, monitoring well 12WW23 remains downgradient and farther from the landfill than 12WW21, which remains unimpacted. Therefore, the recommendation made in the 2014 RA(O) report to cease sampling monitoring

well 12WW23 remains intact. However, wells 12WW22 and 12WW23 will continue to be included in well gauging events.

Between December 2015 and December 2016 a shift in the direction of groundwater flow from easterly to east-northeasterly was observed. The shift in groundwater flow direction did not change the recommendation to discontinue sampling well 12WW23 and to reduce the sampling frequency of well 12WW22 to once every five years. However, due to oversight, these wells were sampled in 2016.

Sloped away from casing?				☒ Yes	☐ No
Pad Area Cleared of Vegetation?				☒ Yes	☐ No
Check any of the following features that apply:					
☐ Many Cracks	☐ Gap Around Casing	☐ Few Cracks	☐ Ponded Water	☐ No Pad Present	

WELL CONDITION:

Inner Diameter (inches): 4"					
Condition:	☒ Good	☐ Broken	☐ Cracked	☐ Other (describe)	
Cap present?				☒ Yes	☐ No
Well lock present?				☒ Yes	☐ No
Lock functioning properly?				☒ Yes	☐ No
Are bollards present and stable?				☒ Yes	☐ No
Well ID visible?				☒ Yes	☐ No

WELL INTEGRITY:

Bailer present?	☐ Yes	☒ No
Visual obstruction?	☐ Yes	☒ No
Is well open to completed depth? (complete when gauging)	☒ Yes	☐ No
Is silt present in well? (complete when gauging)	☐ Yes	☒ No
Is silt greater than 10% of well screen length? (complete when gauging)	☐ Yes	☒ No

COMMENTS:

APPENDIX B: LUC INSPECTION AND MAINTENANCE LOG

LUC Inspection and Maintenance Log - LHAAP 12

Date	Inspected by:	Inspection / MaintenanceActivitiesYearly, at a minimum					Corrective action or repairs required?	Repairs / Action Taken
		Protect Landfill Integrity				Prevent Human Exposure to Groundwater		
		Vegetative Cover maintained: i.e. grass mowed at least annually	Fence and signage maintained	Observance of landfill cover degradation -e.g. desiccation cracks, erosion, or gullying	Continued compliance verified for no digging or disturbance of landfill cover or contents	Verified no withdrawal of use of groundwater (other than environmental testing)		
7/29/2016	Beesinger, S.	Maintained. Vegetative cover is in good condition.	Fence and signage in good repair.	Cover observed and found to be in good condition. Areas of erosion and subsidence repaired in 2015 in good condition. No erosion, cracks, degradation or gullying were found.	No evidence of animal burrowing in the cap.	Completed and verified.	None	None

1 INTRODUCTION

AECOM reviewed one data package from Microbac Laboratory Services, Marietta, OH. Groundwater samples were collected December 1, 2016 at Site 12 at Longhorn Army Ammunition Plant (LHAAP), Karnack, Texas. Data were reviewed for conformance to the requirements of the following guidance documents: Automated Data Review by Laboratory Data Consultants (ADR.net), United States Environmental Protection Agency (EPA) Contract Laboratory Program National Functional Guidelines for Inorganic Data Review, (EPA, July 2002), and EPA Contract Laboratory Program National Functional Guidelines for Low Concentration Organic Data Review, (EPA, June 2001). Results detected between the method detection limits (MDLs) and limits of quantitation (LOQs) were qualified with "J" as estimated and not further discussed.

1.1 Intended Use of Data

The objective of this sampling event for LHAAP-12 is to monitor remedy performance by natural attenuation with land use controls.

Analyses requested included SW8260 – Volatiles by GC/MS.

Table 1 lists completeness by method. **Table 2** lists the sample identifications and their associated laboratory identifications. **Table 3** lists qualified results with the associated quality control parameter that was exceeded.

1.2 Preservation and Holding Times

Sample identification data were evaluated for agreement with the chain-of-custody (COC). All samples were received in appropriate containers, within the proper temperature range, in good condition, and with the required signatures.

1.3 Calibrations

Initial calibration criteria modification includes RSD< or = to 30%, two compounds allowed up to 40%. If the continuing calibration verification (CCV) compound exceeds 20% drift, the compound is checked in the LCS, if both are outside recovery limits, the compound is rejected, R. The compound is qualified J or UJ if outside criteria.

1.3.1 Continuing Calibration Verifications (CCV)

1.3.1.1 SW8260

CCV WG593709-02 has bromomethane at 79% in analytical batch WG593712. The associated samples are non-detect for bromomethane and are UJ qualified.

Table 3 shows qualified analytical results.

1.3.2 Blanks

Sample concentrations above the DLs but less than or equal to five times the concentrations in the associated blanks (or 10 times for common laboratory contaminants) were qualified U. No qualifiers were assigned if the associated results were either greater than five times the blank concentrations or if the analytes were not detected in the samples.

All blanks were within control limits.

1.3.3 Surrogates

All surrogates are within criteria.

1.3.4 Laboratory Control Sample (LCS)

All LCS are within criteria.

2 DATA USABILITY SUMMARY

The data are usable for the intended purposes of the project. The data quality objectives have been met for the project.

Table 1: Completeness by Method

Method	No. of Rejected Results	% Completeness
SW8260	0	100

Please find enclosed the analytical results for the samples you submitted to Microbac Laboratories. Review and compilation of your report was completed by Microbac's Ohio Valley Division (OVD). If you have any questions, comments, or require further assistance regarding this report, please contact your service representative listed below.

Laboratory Contact:
Adriane Steed – Client Services Specialist
(740) 373-4071
Adriane.Steed@microbac.com

I certify that all test results meet all of the requirements of the DoD QSM and other applicable contract terms and conditions. Any exceptions are attached to this cover page or addressed in the method narratives presented in the report. All results for soil samples are reported on a 'dry-weight' basis unless specified otherwise. Analytical results for water and wastes are reported on a 'as received' basis unless specified otherwise. A statement of uncertainty for each analysis is available upon request. This laboratory report shall not be reproduced, except in full, without the written approval of Microbac Laboratories, DoD ELAP certification number 2936.01. The reported results are related only to the samples analyzed as received.

This report was certified on December 13 2016

Record of Sample Receipt and Inspection

Comments/Discrepancies

This is the record of the shipment conditions and the inspection records for the samples received and reported as a sample delivery group (SDG). All of the samples were inspected and observed to conform to our receipt policies, except as noted below.

The following discrepancies were noted:

Discrepancy	Resolution
Sample ID: 12WW23-120116 (12/1 @ 08:45). 2 of 3 voa vials received frozen and broken. BRG	Please proceed ALS

Coolers

Cooler #	Temperature Gun	Temperature	COC #	Airbill #	Temp Required?
00114562	I	2.0		J4616883013	X

Inspection Checklist

#	Question	Result
1	Were shipping coolers sealed?	Yes
2	Were custody seals intact?	Yes
3	Were cooler temperatures in range of 0-6?	Yes
4	Was ice present?	Yes
5	Were COC's received/information complete/signed and dated?	Yes
6	Were sample containers intact and match COC?	No
7	Were sample labels intact and match COC?	Yes
8	Were the correct containers and volumes received?	Yes
9	Were samples received within EPA hold times?	Yes
10	Were correct preservatives used? (water only)	Yes
11	Were pH ranges acceptable? (voa's excluded)	NA
12	Were VOA samples free of headspace (less than 6mm)?	Yes

Laboratory Data Package Cover Page

	R1	Field chain-of-custody documentation;
	R2	Sample identification cross-reference;
	R3	Test reports (analytical data sheets) for each environmental sample that includes: (a) Items consistent with NELAC Chapter 5, (b) dilution factors, (c) preparation methods, (d) cleanup methods, and (e) a.if required for the project, tentatively identified compounds (TICs).
	R4	Surrogate recovery data including: (a) Calculated recovery (%R), and (b) the laboratory's surrogate QC limits.
	R5	Test reports/summary forms for blank samples;
	R6	Test reports/summary forms for laboratory control samples (LCSs) including: (a) LCS spiking amounts, (b) calculated %R for each analyte, and (c) the laboratory's LCS QC limits.
	R7	Test reports for project matrix spike/matrix spike duplicates (MS/MSDs) including: (a) samples associated with the MS/MSD clearly identified, (b) MS/MSD spiking compounds, (c) concentration of each MS/MSD analyte measured in the parent and spiked samples, (d) calculated %Rs and relative percent differences (RPDs), and (e) the laboratory's MS/MSD QC limits.
	R8	Laboratory analytical duplicate (if applicable) recovery and precision: (a) the amount of analyte measured in the duplicate, (b) the calculated RPD, and (c) the laboratory's QC limits for analytical duplicates.
	R9	List of method quantitation limits (MQLs) and detectability check sample results for each analyte for each method and matrix.
	R10	Other problems or anomalies.

Texas Risk Reduction Program (TRRP) Checklist

Laboratory Name:	Microbac OVD	**Laboratory Log Number:**	L16120109
Project Name:		**Method:**	8260
Prep Batch Number(s):	593712	**Reviewer Name:**	Sarah Vandenberg
LRC Date:	2016-12-13 00:00:00		

Description	Yes	No	NA	NR	ER#
Chain-of-custody (C-O-C)					
Did samples meet the laboratory's standard conditions of sample acceptability upon receipt?	X				
Were all departures from standard conditions described in an exception report?	X				
Sample and quality control (QC) identification	X				
Are all field sample ID numbers cross-referenced to the laboratory ID numbers?	X				
Are all laboratory ID numbers cross-referenced to the corresponding QC data?	X				
Test reports					
Were all samples prepared and analyzed within holding times?	X				
Other than those results < MQL, were all other raw values bracketed by calibration standards?	X				
Were calculations checked by a peer or supervisor?	X				
Were all analyte identifications checked by a peer or supervisor?	X				
Were sample detection limits reported for all analytes not detected?	X				
Were all results for soil and sediment samples reported on a dry weight basis?	X				
Were % moisture (or solids) reported for all soil and sediment samples?	X				
Were bulk soils/solids samples for volatile analysis extracted with methanol per SW846 Method 5035?			X		
If required for the project, are TICs reported?			X		
Surrogate recovery data					
Were surrogates added prior to extraction?	X				
Were surrogate percent recoveries in all samples within the laboratory QC limits?	X				
Test reports/summary forms for blank samples	X				
Were appropriate type(s) of blanks analyzed?	X				
Were blanks analyzed at the appropriate frequency?	X				
Were method blanks taken through the entire analytical process, including preparation and, if applicable, cleanup procedures?	X				
Were blank concentrations < MQL?	X				
Laboratory control samples (LCS):					
Were all COCs included in the LCS?	X				

Microbac

Texas Risk Reduction Program (TRRP) Checklist

Laboratory Name:	Microbac OVD	**Laboratory Log Number:**	L16120109
Project Name:		**Method:**	8260
Prep Batch Number(s):	593712	**Reviewer Name:**	Sarah Vandenberg
LRC Date:	2016-12-13 00:00:00		

Was each LCS taken through the entire analytical procedure, including prep and cleanup steps?	X				
Were LCSs analyzed at the required frequency?	X				
Were LCS (and LCSD, if applicable) %Rs within the laboratory QC limits?	X				
Does the detectability check sample data document the laboratory's capability to detect the COCs at the MDL used to calculate the SDLs?	X				
Was the LCSD RPD within QC limits?	X				
Matrix spike (MS) and matrix spike duplicate (MSD) data					
Were the project/method specified analytes included in the MS and MSD?			X		
Were MS/MSD analyzed at the appropriate frequency?			X		
Were MS (and MSD, if applicable) %Rs within the laboratory QC limits?			X		
Were MS/MSD RPDs within laboratory QC limits?			X		
Analytical duplicate data					
Were appropriate analytical duplicates analyzed for each matrix?			X		
Were analytical duplicates analyzed at the appropriate frequency?			X		
Were RPDs or relative standard deviations within the laboratory QC limits?			X		
Method quantitation limits (MQLs):					
Are the MQLs for each method analyte included in the laboratory data package?	X				
Do the MQLs correspond to the concentration of the lowest non-zero calibration standard?	X				
Are unadjusted MQLs and DCSs included in the laboratory data package?	X				
Other problems/anomalies					
Are all known problems/anomalies/special conditions noted in this LRC and ER?	X				
Was applicable and available technology used to lower the SDL to minimize the matrix interference effects on the sample results?	X				
Is the laboratory NELAC-accredited under the Texas Laboratory Accreditation Program for the analytes, matrices and methods associated with this laboratory data package?	X				
Initial calibration (ICAL)					
Were response factors and/or relative response factors for each analyte within QC limits?	X				
Were percent RSDs or correlation coefficient criteria met?	X				

Microbac

Texas Risk Reduction Program (TRRP) Checklist

Laboratory Name:	Microbac OVD	**Laboratory Log Number:**	L16120109
Project Name:		**Method:**	8260
Prep Batch Number(s):	593712	**Reviewer Name:**	Sarah Vandenberg
LRC Date:	2016-12-13 00:00:00		

Was the number of standards recommended in the method used for all analytes?	X				
Were all points generated between the lowest and highest standard used to calculate the curve?	X				
Are ICAL data available for all instruments used?	X				
Has the initial calibration curve been verified using an appropriate second source standard?	X				
Initial and continuing calibration verification (ICCV and CCV) and continuing calibration blank (CCB):					
Was the CCV analyzed at the method-required frequency?	X				
Were percent differences for each analyte within the method-required QC limits?		X			1
Was the ICAL curve verified for each analyte?	X				
Was the absolute value of the analyte concentration in the inorganic CCB < MDL?			X		
Mass spectral tuning					
Was the appropriate compound for the method used for tuning?	X				
Were ion abundance data within the method-required QC limits?	X				
Internal standards (IS)					
Were IS area counts and retention times within the method-required QC limits?	X				
Raw data (NELAC Section 5.5.10)					
Were the raw data (for example, chromatograms, spectral data) reviewed by an analyst?	X				
Were data associated with manual integrations flagged on the raw data?	X				
Dual column confirmation					
Did dual column confirmation results meet the method-required QC?			X		
Tentatively identified compounds (TICs)					
If TICs were requested, were the mass spectra and TIC data subject to appropriate checks?			X		
Interference Check Sample (ICS) results					
Were percent recoveries within method QC limits?			X		
Serial dilutions, post digestion spikes, and method of standard additions					
Were percent differences, recoveries, and the linearity within the QC limits specified in the method?			X		
Method detection limit (MDL) studies

Texas Risk Reduction Program (TRRP) Checklist

Laboratory Name:	Microbac OVD	**Laboratory Log Number:**	L16120109
Project Name:		**Method:**	8260
Prep Batch Number(s):	593712	**Reviewer Name:**	Sarah Vandenberg
LRC Date:	2016-12-13 00:00:00		

Was a MDL study performed for each reported analyte?	X				
Is the MDL either adjusted or supported by the analysis of DCSs?	X				
Proficiency test reports					
Was the laboratory's performance acceptable on the applicable proficiency tests or evaluation studies?	X				
Standards documentation					
Are all standards used in the analyses NIST-traceable or obtained from other appropriate sources?	X				
Compound/analyte identification procedures					
Are the procedures for compound/analyte identification documented?	X				
Demonstration of analyst competency (DOC)					
Was DOC conducted consistent with NELAC Chapter 5?	X				
Is documentation of the analyst's competency up-to-date and on file?	X				
Verification/validation documentation for methods (NELAC Chapter 5)					
Are all the methods used to generate the data documented, verified, and validated, where applicable?	X				
Laboratory standard operating procedures (SOPs)					
Are laboratory SOPs current and on file for each method performed	X				

1. Items identified by the letter “R” must be included in the laboratory data package submitted in the TRRP-required report(s). Items identified by the letter “S” should be retained and made available upon request for the appropriate retention period;

2. O = organic analyses; I = inorganic analyses (and general chemistry, when applicable);

3. NA = Not applicable;

4. NR = Not reviewed;

5. ER# = Exception Report identification number (an Exception Report should be completed for an item if “NR” or “No” is checked).

The Exception Report for each “No” or “Not Reviewed (NR)” item in Laboratory Review Checklist and for each analyte, matrix, and method for which the laboratory does not hold NELAC accreditation under the Texas Laboratory Accreditation Program.

Release Statement: I am responsible for the release of this laboratory data package. This laboratory is NELAC accredited under the Texas Laboratory Accreditation Program for all the methods, analytes, and matrices reported in this data package except as noted in the Exception Reports. The data have been reviewed and are technically compliant with the requirements of the methods used, except where noted by the laboratory in the Exception Reports. By my signature

2.1.1.2 QC Summary Data

Example 8260 Calculations

1.0 Calculating the Response Factor (RF) from the initial calibration (ICAL) data:

RF = [(Ax) (Cis)] / [(Ais) (Cx)]

where:	Example
Ax = Area of the characteristic ion for the compound being measured:	3399156
Cis = Concentration of the specific internal standard (ug/mL)	25
Ais = Area of the characteristic ion of the specific internal standard	846471
Cx = Concentration of the compound in the standard being measured (ug/mL)	100
RF = Calculated Response Factor	**1.0039**

2.0 Calculating the concentration (C) of a compound in water using the average RF: *

Cx = [(Ax) (Cis) (Vn)(D)] / [(Ais) (RF) (Vs)]

where:	**Example**
Ax = Area of the characteristic ion for the compound being measured	**3122498**
Cis = Concentration of the specific internal standard (ug/L)	**25**
D = Dilution factor for sample as a multiplier (10x = 10)	**1**
Ais = Area of the characteristic ion of the specific internal standard	**611048**
RF = Average RF from the ICAL	**1.004**
Vs = Purge volume of sample (mL)	**10**
Vn = Nominal purge volume of sample (mL) (10.0 mL)	**10**
Cx = Concentration of the compound in the sample being measured (ug/L)	**127.2428**

3.0 Calculating the concentration (C) of a compound in soil using the average RF: *

Cx = [(Ax) (Cis) (Wn)(D)] / [(Ais) (RF) (Ws)]

where:	**Example**
Ax = Area of the characteristic ion for the compound being measured	**3122498**
Cis = Concentration of the specific internal standard (ug/L)	**25**
D = Dilution factor for sample as a multiplier (10x = 10)	**1**
Ais = Area of the characteristic ion of the specific internal standard	**611048**
RF = Average RF from the ICAL	**1.004**
Ws = Weight of sample purged (g)	**5**
Wn = Nominal purge weight (g) (5.0 g)	**5**
Cx = Concentration of the compound in the sample being measured (ug/L)	**127.2428**

Dry weight correction:

Percent solids (PCT_S)	**50**
Cd = (Cx) (100)/PCT_S	**254.4856**

* Concentrations appearing on the instrument quantitation reports are on-column results and do not take into account initial volume, final volume, and the dilution factor.

4.0 Concentration from Linear Regression

Step 1: Retrieve Curve Data From Plot, y = mx + b

y = response ratio = response of analyte / response of IS = Ax/Ais

x = amount ratio = concentration analyte/concentration internal standard = Cx / Cis

m = slope from curve = 0.213

b = intercept from curve = - 0.00642

Step 2: Calculate y from Quantitation Report

y = 86550/593147 = 0.1459

Step 3: Solve for x

x = (y - b)/m = [(0.1459 -(- 0.00642)]/ 0.213 = 0.7152

Step 4: Solve for analyte concentration Cx

Cx = Cis (x) = (25.0)(0.7152) = 17.88

Example Spreadsheet Calculation:

Slope from curve, m:	**0.213**
Intercept from curve, b:	**-0.00642**
Area of analyte, Ax:	**86550**
Area of Internal Standard , Ais:	**593147**
Concentration of IS, Cis	**25.00**
Response Ratio:	**0.145917**
Amount Ratio:	**0.715195**
Concentration:	**17.87988**
Units of Internal Standard:	**ug/L**

5.0 Concentration from Quadratic Regression

Step 1 - Retrieve Curve Data from Plot, y = Ax^2 + Bx + C
Where:
Ax^2 + Bx + (C - y) = 0
A, B, C = constants from the ICAL quadratic regression
y = Response ratio = Area of analyte/Area of internal standard (IS)
x = Amount ratio = Concentration of analyte/concentration of IS

Step 2: Calculate y from Quantitation Report

y = Ax/Ais

Step 3: Solve for x using the quadratic formula
Ax^2 + Bx + C - y = 0

$$x = \frac{b \pm \sqrt{\left(b^2 - 4a(c - y)\right)}}{2a}$$ (Two possible solutions)

Step 4: Solve for analyte concentration Cx

Cx = (Cis)(Amount ratio)

Example Spreadsheet Calculation:

Value of A from plot:	**-0.00629**	
Value of B from plot:	**0.511**	
Value of C from plot:	**-0.0276**	
Area of unknown from quantitation report:	**293821**	
Area of IS from quantiation report:	**784848**	
Response ratio, y:	**0.374367**	
C - y:	**-0.40197**	
Root 1 - Computed amount ratio , X1:	**80.44567**	
Root 2 - Computed amount ratio , X2:	**0.794396**	use this solution
Concentration of IS, Cis:	**25.00**	
Concentration of analyte, Cx:	**19.86**	ug/L

Microbac Laboratories Inc.
List of Valid Qualifiers
December 13, 2016

Qualkey: DOD

Qualifier	Description
*	Surrogate or spike compound out of range
+	Correlation coefficient for the MSA is less than 0.995
<	Result is less than the associated numerical value.
>	Greater than
>,H1	Result is greater than the associated numerical value. Sample analysis performed past holding time.
A	See the report narrative
B	The reported result is associated with a contaminated method blank.
B,H1	Analyte present in method blank. Sample analysis performed past holding time.
B1	Target analyte detected in method blank at or above the method reporting limit
B3	Target analyte detected in calibration blank at or above the method reporting limit
B4	The BOD unseeded dilution water blank exceeded 0.2 mg/L
C	Confirmed by GC/MS
CG	Confluent growth
CT1	Cooler temperature at sample reciept exceeded regulatory limit.
DL	Surrogate or spike compound was diluted out
E	Estimated concentration due to sample matrix interference
E,CT1	Estimated results. The cooler temperature at receipt exceeded regulatory guidelines for requested testing.
EDL	Elevated sample reporting limits, presence of non-target analytes
EMPC	Estimated Maximum Possible Concentration
F, S	Estimated result below quantitation limit; method of standard additions(MSA)
F,CT1	Estimated value; the analyte concentration was less than the RL/LOQ. The cooler temperature at receipt exceeded regula
FL	Free Liquid
FP1	Did not ignite.
H1	Sample analysis performed past holding time.
H1,CT1	Sample analysis performed past holding time. The cooler temperature at receipt exceeded regulatory guidelines for reque
I	Semiquantitative result (out of instrument calibration range)
J	Estimated concentration; sample matrix interference.
J	Estimated value ; the analyte concentration was greater than the highest standard
J	Estimated value ; the analyte concentration was less than the LOQ.
J	The reported result is an estimated value.
J,B	Analyte detected in both the method blank and sample above the MDL.
J,CT1	Estimated value ; the analyte concentration was less than the LOQ. Cooler temperature at sample reciept exceeded regu
J,H1	Estimated value ; the analyte concentration was less than the LOQ. Sample analysis performed past holding time.
J,H1	The reported result is an estimated value. Sample was analyzed past holding time.
J,P	Estimate; columns don't agree to within 40%
J,S	Estimated concentration; analyzed by method of standard addition (MSA)
JB	The reported result is an estimated value. The reported result is also associated with a contaminated method blank.
JQ	The reported result is an estimated value and one or more quality control criteria failed. See narrative.
L	Sample reporting limits elevated due to matrix interference
L1	The associated blank spike (LCS) recovery was above the laboratory acceptance limits.
L2	The associated blank spike (LCS) recovery was below the laboratory acceptance limits.
M	Matrix effect; the concentration is an estimate due to matrix effect.
N	Nontarget analyte; the analyte is a tentativlely identified compound (TIC) by GC/MS
NA	Not applicable
ND	Not detected at or above the reporting limit (RL)
ND, B	Not detected at or above the reporting limit (RL). Analyte present in method blank.
ND, CT1	Analyte was not detected. The concentration is below the reported LOD. The cooler temperature at receipt exceeded reg
ND, L	Not detected; sample reporting limit (RL) elevated due to interference
ND, S	Not detected; analyzed by method of standard addition (MSA)
ND,H1	Not detected; Sample analysis performed past holding time.
ND,H1,CT1	Not detected; Sample analysis performed past holding time. The cooler temperature at receipt exceeded regulatory guide
NF	Not found by library search
NFL	No free liquid
NI	Non-ignitable
NR	Analyte is not required to be analyzed
NS	Not spiked
P	Concentrations >40% difference between the two GC columns
Q	One or more quality control criteria failed. See narrative.
Q,H1	One or more quality control criteria failed. Sample analyzed past holding time. See narrative.
QNS	Quantity of sample not sufficient to perform analysis
RA	Reanalysis confirms reported results
RE	Reanalysis confirms sample matrix interference
S	Analyzed by method of standard addition (MSA)
SMI	Sample matrix interference on surrogate
SP	Reported results are for spike compounds only
T5	Laboratory not licensed for this parameter
TIC	Library Search Compound

Microbac Laboratories Inc.
List of Valid Qualifiers
December 13, 2016

Qualkey: DOD

TNTC	Too numerous to count
TNTC, B	Too numerous to count. Analyte present in method blank.
TNTC,CT1	Too numerous to count. The cooler temperature at receipt exceeded regulatory guidelines for requested testing.
TNTC,H1	Too numerous to count. Sample analysis performed past holding time.
U	Analyte was not detected. The concentration is below the reported LOD.
U,CT1	Analyte was not detected. The concentration is below the reported LOD. Cooler temperature at sample reciept exceeded
U,H1	Not detected; Sample analysis performed past holding time.
UJ	Undetected; the MDL and RL are estimated due to quality control discrepancies.
UQ	Undetected; the analyte was analyzed for, but not detected.
W	Post-digestion spike for furnace AA out of control limits
X	Exceeds regulatory limit
X, S	Exceeds regulatory limit; method of standard additions (MSA)
Z	Cannot be resolved from isomer - see below

NELAP Addendum - January 4, 2016

Non-NELAP LIMS Product and Description

The following is a list of those tests that are not included in the Microbac – OVD NELAP Scope of Accreditation:

Heat of Combustion (BTU)
Total Halide by Bomb Combustion (TX)
Particle Sizing - 200 Mesh (PS200)
Specific Gravity/Density (SPGRAV)
Total Residual Chlorine (CL-TRL)
Total Volatile Solids (all forms) (TVS)
Total Coliform Bacteria (all methods)
Fecal Coliform Bacteria (all methods)
Sulfite (SO3)
Propionaldehyde (HPLC-UV)

SOLID AND HAZARDOUS CHEMICALS
Nitrogen, Ammonia by Method 350.1
Chromium, Hexavalent, Leachable by SM3500 Cr-B 2009
Phenolics, Total by Method 420.1
ASTM D3987-06

NELAP Accreditation by Laboratory SOP

NONPOTABLE WATER

OVD HPLC02/HPLC-UV

Nitroglycerin
Acetic acid
Butyric acid
Lactic acid
Propionic acid
Pyruvic acid

OVD MSS01/GC-MS

1,4-Phenylenediamine
1-Methylnaphthalene
1,4-Dioxane
Atrazine
Benzaldehyde
Biphenyl
Caprolactam
Hexamethylphosphoramide (HMPA)
Pentachlorobenzene
Pentachloroethane

NELAP Accreditation by Laboratory SOP

NONPOTABLE WATER

OVD MSV01/GC-MS

1, 1, 2-Trichloro-1,2,2-trifluoroethane
1,3-Butadiene
Cyclohexane
Cyclohexanone
Dimethyl disulfide
Dimethylsulfide
Ethyl-t-butylether (ETBE)
Isoprene
Methylacetate
Methylcyclohexane
T-amylmethylether (TAME)
Tetrahydrofuran (THF)

OVD HPLC07/HPLC-MS-MS

Hexamethylphosphoramide (XMPA-LCMS)

OVD HPLC12/HPLC/UV

Acetate
Formate

OVD RSK01/GC-FID

Acetylene
Propane

OVD K9305/ISE

Fluoroborate

SOLID AND HAZARDOUS CHEMICALS

OVD MSS0I/GC-MS

1-Methylnaphthalene
Benzaldehyde
Biphenyl
Caprolactam
Pentachloroethane

NELAP Accreditation by Laboratory SOP

SOLID AND HAZARDOUS CHEMICALS

OVD MSV0I/GC-MS

1.3-Butadiene
Cyclohexane
Cyclohexanone
Dimethyl disulfide
Dimethylsulfide
Ethyl-t-butylether (ETBE)
lsoprene
Methylacetate
Methylcyclohexane
n-Hexane
T-amylmethylether (TAME)

APPENDIX E: MANN-KENDALL STATISTICS FOR TREND IN 12WW24 FOR TCE

Statement of Purpose

The purpose of the Installation Action Plan (IAP) is to outline the total multiyear cleanup program for an installation. The plan identifies environmental cleanup requirements at each site or area of concern (AOC), and proposes a comprehensive, installation-wide approach, along with the costs and schedules associated with conducting investigations and taking the necessary remedial actions (RA).

In an effort to coordinate planning information between the restoration manager, Base Realignment and Closure (BRAC), the US Army Environmental Command (USAEC), Longhorn Army Ammunition Plant (LHAAP), the executing agencies, regulatory agencies, and the public, an IAP was completed. The IAP is used to track requirements, schedules, and tentative budgets for all major Army installation cleanup programs.

All site-specific funding and schedule information has been prepared according to projected overall Army funding levels and is, therefore, subject to change.

Acronyms

AEDB-R	Army Environmental Database- Restoration
ammo	Ammunition
AOC	Area of Concern
ARAR	Applicable or Relevant and Appropriate Requirements
AST	Aboveground Storage Tank
BIP	Blow in Place
Bldg	Building

WWTP	Wastewater Treatment Plant

Installation Information

Installation Locale

Installation Size (Acreage): 8,416.00
City: Marshall
County: Harrison
State: Texas
Other Locale Information

LHAAP is located in central east Texas, in the northeast corner of Harrison County, approximately 14 miles northeast of Marshall, Texas, and 40 miles west of Shreveport, Louisiana. The closed installation currently occupies approximately 1,400 of its original 8,416 acres between State Highway 43 and the western shore of Caddo Lake. The area surrounding LHAAP is primarily rural and consists of forest lands, the small towns of Karnack and Uncertain, Texas, Caddo Lake, and Caddo Lake State Park.

Installation Mission

The LHAAP was an Army Materiel Command installation which the Army declared excess to its needs in July 1997. While active, the installation's mission was the production of trinitrotoluene (TNT) [World War II (WWII) era only], pyrotechnic items, and rocket motors. In 2003, the BRAC Division was tasked with its disposal.

Lead Organization

Base Realignment and Closure Division

Lead Executing Agencies for Installation

US Army Corps of Engineers (USACE), Tulsa District

Regulator Participation

Federal	US Environmental Protection Agency (USEPA), Region VI
State	Texas Commission on Environmental Quality (TCEQ)

National Priorities List (NPL) Status

A score of 40 was recorded on 01-AUG-90.

Final RA(C) Completion Date: 202106

Date for NPL Deletion: TBD

Installation Restoration Advisory Board (RAB)/Technical Review Committee (TRC)/Technical Assistance for Public Participation (TAPP) Status

RAB established 2004

Installation Program Summaries

Primary Contaminants of Concern: Explosives, Metals, Munitions constituents (MC), Perchlorate, Petroleum, Oil and Lubricants (POL), Volatiles (VOC)

Affected Media of Concern: Groundwater, Sediment, Soil, Surface Water

Installation Information

MMRP

Primary Contaminants of Concern: Explosives

Affected Media of Concern: Groundwater, Soil

Cleanup Program Summary

Installation Historic Activity

The LHAAP was established in October 1942, with the primary mission of producing 2,4,6-TNT flake. Monsanto Chemical Company was the first contract operator of the plant. Production of 2,4,6-TNT continued through WWII until August 1945, when the plant went on standby status until February 1952. From then until 1956, Universal Match Corporation was the contracting operator, producing such pyrotechnic ammunition as photoflash bombs, simulators, hand signals, and tracers for 40 millimeter (mm) ammunition. With the departure of Universal Match Corporation in 1956, Thiokol assumed this responsibility, along with rocket motor production. Production of rocket motors continued to be the primary mission of LHAAP until 1965, when the production of pyrotechnic and illuminating ammunition was re-established.

Prior to 1994, operations consisted of compounding pyrotechnic and propellant mixtures, load, assemble, and pack (LAP) activities, accommodating receipt and shipment of containerized cargo, and maintenance and/or layaway of standby facilities and equipment as they apply to mobilization planning. The installation was also responsible for the static firing and elimination of Pershing I and II rocket motors in compliance with the intermediate-range nuclear force (INF) treaty in effect between the US and the former Union of Soviet Socialist Republics (USSR). In October 1996, a lease in excess of 1,000 of the 8,416 acres was granted to the Caddo Lake Institute (CLI) for biological and ecological studies by local schools and universities.

In July 1997, the plant became inactive and excess to the Army's needs. In July 1998 the Army contracted EarthTech, Inc. to liquidate all personal property and specific installed property. That contract was completed in fiscal year (FY)2000. In 1999 the Army contracted with Project Development Corporation to demolish specified structurally unsafe buildings. In 2003 the demolition of all remaining buildings began. The demolition of the power plant was completed in 2009. Only the transformers remaining, all planned demolition has taken place. A memorandum of agreement (MOA) between the Army and the US Fish and Wildlife Service (USFWS), was signed on Oct. 21, 2000 designating an area, consisting of approximately 7,200 acres, for establishment of a wildlife refuge overlay at LHAAP. In October 2002 LHAAP was transferred to the Base Realignment and Closure Office (BRACO) to manage as an excess property. In April 2004, the Army and the USFWS entered into an MOA that set forth the transfer process of LHAAP acreage. Since May 2004, approximately 7,200 LHAAP acres have been transferred to the USFWS. The USFWS manages these acres as the Caddo Lake National Wildlife Refuge within the perimeter fence of the former installation. Although the perimeter fence and gates remain functional, guards are no longer posted since the Army's security contract expired on March 14, 2007. The CLI lease with the Army was transferred to the USFWS with the affected acreage.

On Aug. 9, 1990, the LHAAP was placed on the NPL. After being listed on the NPL, LHAAP, the USEPA, and the Texas Water Commission (TWC) (now called the TCEQ) entered into a Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) Section 120 Agreement for remedial activities at LHAAP. The CERCLA Section 120 agreement, referred to as the federal facility agreement (FFA), became effective Dec. 30, 1991. The installation applied for a Resource Conservation and Recovery Act (RCRA) Part A permit.

In February 1992, a RCRA Part B permit was signed. As a result, a RCRA facility assessment (RFA) identified 57 potential sites of concern. Since that time, scrubbing of the list [removal of non-Environmental Restoration, Army (ER,A) eligible sites, redundancies, etc.] has resulted in the current Army Environmental Database - Restoration (AEDB-R) list of 50 sites. In late 2007, the USEPA Region VI clarified their view of the NPL status of LHAAP as consisting of only those sites listed in the FFA and any additional sites with significant contamination. During a meeting between the Army, the USEPA and the TCEQ held in February 2008 at TCEQ headquarters, regulators and the Army agreed on the sites that will be addressed as NPL, including those listed and those considered to be NPL-caliber. The NPL sites are LHAAP-004, LHAAP-037, LHAAP-046, LHAAP-047, LHAAP-049, LHAAP-050, LHAAP-058, and LHAAP-067 as well as the following sites which are listed in the FFA: LHAAP-001, LHAAP-011, LHAAP-012, LHAAP-013, LHAAP-014, LHAAP-016, LHAAP-017, LHAAP-018, LHAAP-024, LHAAP-027, LHAAP-029, LHAAP-032, LHAAP-054. The USEPA will continue to provide review and concurrence on documents related to these sites and will co-sign records of decision (RODs). The schedule for each of these sites will be described in this IAP, which will serve as formal documentation of the resolution between the Army and USEPA.

The non-NPL sites will be addressed through CERCLA, with RCRA issues addressed, as necessary, as applicable or relevant and appropriate requirements (ARAR), with the TCEQ as lead regulator. The USEPA will provide review; however, the decision documents (DD) will be signed by the Army alone with the TCEQ providing a letter of concurrence. In addition to the site listing of the FFA, an installation assessment by the Army in February 1980 and the RFA in April 1988 identified additional potential sites of concern. The information management system used in the early-1990s [Defense Environmental Restoration Program Management Information System (DERPMIS)] identified 59 sites at that time. In the mid-1990s, the tracking system being used at the time [the Restoration Management Information System (RMIS)] was updated to remove duplicate sites, sites contained within other sites, sites that were not a part of the restoration program, and sites that never existed.

Cleanup Program Summary

The following sites have been transferred: LHAAP-001, LHAAP-005, LHAAP-008, LHAAP-009, LHAAP-011, LHAAP-12, LHAAP-013, LHAAP-014, LHAAP-015, LHAAP-032, LHAAP-034, LHAAP-035, LHAAP-036, LHAAP-045, LHAAP-048, LHAAP-049, LHAAP-052, LHAAP-053, LHAAP-055, LHAAP-057, LHAAP-061, LHAAP-063 and LHAAP-002-R-01.

Installation Program Cleanup Progress

IRP

Prior Year Progress:

- LTM continues for LHAAP-012
- RA(O) underway for LHAAP-046
- RA(O) underway for LHAAP-050
- RA(O) underway for LHAAP-058
- RA(O) underway for LHAAP-067

Future Plan of Action:

- Remedial action (operations) [RA(O)]/long-term management (LTM) will be implemented for LHAAP-037 and will continue for LHAAP-12, LHAAP-046, LHAAP-050, LHAAP-058 and LHAAP-067
- A ROD will be completed for LHAAP-003, LHAAP-004, LHAAP-016, LHAAP-017, LHAAP-018/024, LHAAP-029, and LHAAP-047

MMRP

Prior Year Progress: None, awaiting resolution of dispute with the USEPA.

Future Plan of Action: A ROD will be completed for LHAAP-001-R-01 and LHAAP-003-R-01. The LTM phase will begin.

LONGHORN ARMY AMMUNITION PLANT

Non-BRAC Excess
Installation Restoration Program

IRP Summary

Installation Total Army Environmental Database-Restoration (AEDB-R) Sites/Closeout Sites Count: 54/14

Installation Site Types with Future and/or Underway Phases

2 Above Ground Storage Tank
(LHAAP-049, LHAAP-067)
3 Burn Area
(LHAAP-001, LHAAP-017, LHAAP-018)
1 Contaminated Ground Water
(PBC Longhorn)
1 Disposal Pit/Dry Well
(LHAAP-063)
4 Landfill
(LHAAP-011, LHAAP-012, LHAAP-016, LHAAP-019)
1 Oil Water Separator
(LHAAP-056)
6 Spill Site Area
(LHAAP-051, LHAAP-052, LHAAP-058, LHAAP-066, LHAAP-070, LHAAP-071)
12 Storage Area
(LHAAP-002, LHAAP-003, LHAAP-006, LHAAP-007, LHAAP-036, LHAAP-037, LHAAP-045, LHAAP-059, LHAAP-060, LHAAP-064, LHAAP-065, LHAAP-068)
1 Surface Impoundment/Lagoon
(LHAAP-024)
2 Underground Storage Tank
(LHAAP-035, LHAAP-069)
4 Waste Lines
(LHAAP-029, LHAAP-046, LHAAP-047, LHAAP-050)
3 Waste Treatment Plant
(LHAAP-004, LHAAP-008, LHAAP-055)

Most Widespread Contaminants of Concern

Explosives, Metals, Munitions constituents (MC), Perchlorate, Petroleum, Oil and Lubricants (POL), Volatiles (VOC)

Media of Concern

Groundwater, Sediment, Soil, Surface Water

Completed Remedial Actions (Interim Remedial Actions / Final Remedial Actions (IRA/FRA))

Site ID	Site Name	Action	Remedy	FY	Cost
LHAAP-018	BURNING GROUND/WASHOUT POND(SWMU 18)	IRA	REMOVAL	1997	TBD
LHAAP-024	FORMER UNLINED EVAP POND (SWMU 24)	IRA	REMOVAL	1997	TBD

Duration of IRP

Year of IRP Inception: 197906

Estimated Date for Remedy-In-Place (RIP)/Response Complete (RC): 202106/209909

Date of IRP completion including Long Term Management (LTM): 209909

IRP Contamination Assessment

Contamination Assessment Overview

In early 2008, the installation-wide ecological risk assessment was completed. In 2012 it was discovered that explosives analysis data which had been deemed unusable was inadvertently included in the ecological risk assessment. The impact of removing the unusable data from the ecological risk assessment was evaluated with additional samples collected and an ecological risk assessment addendum completed in 2014. Work currently being conducted under a performance-based acquisition (PBA) includes conducting additional sampling activities at several sites and finalizing outstanding FSs, with proposed plans (PP) and a ROD to follow during calendar year 2016. Regulatory concurrence was obtained for reports recommending no action for these 11 sites: LHAAP-06, LHAAP-07, LHAAP-23, LHAAP-35, LHAAP-36, LHAAP-51, LHAAP-55, LHAAP-60, LHAAP-64, LHAAP-66, and LHAAP-68.

In 2008, DDs were signed for sites LHAAP-6, 7, 48, 51, 55, 60, 64, 66, and 68. Also in 2008 the FSs were completed for all applicable total environmental restoration contract (TERC) sites including the three TERC NPL sites (LHAAP-32, LHAAP-37, and LHAAP-67) and a ROD document was signed for TERC NPL site LHAAP-32 in 2008. No action DDs were signed in 2008 for the remaining TERC sites (LHAAP-8, LHAAP-48, LHAAP-53, and LHAAP-59) and in 2010 the RODs were signed for LHAAP-37, LHAAP-46, LHAAP-49, LHAAP-50, LHAAP-58, LHAAP-67 and Pistol Range. In 2014 a no further action (NFA) DD was completed for LHAAP-19, -56, -65 and -69. In 2015, an NFA DD was completed for LHAAP-05, -09, -15, -34, -52, -57, -61, -63, -70, and -71. In 2012, the following IRP sites were added to AEDB-R: LHAAP-46, -47, -49, -56, -59, and -65.

Sediment samples collected by the Army from Caddo Lake near the mouths of two branches of Goose Prairie Creek indicated elevated lead and mercury concentrations. The sampling locations are outside of the installation boundary. In 2004, an investigation of contaminants in fish tissue from three Caddo Lake sites, one of which is upgradient at Clinton Lake, was funded by the USEPA Region 6 and performed by the TCEQ Region 5. It concluded that mercury was present at elevated levels from all three sites, dioxin was also present, but highest at Clinton Lake (a lake upstream from LHAAP), and pesticides, polychlorinated biphenyls (PCB) and perchlorate were not detected in either edible fish fillets or whole fish.

Approximately 7,200 acres of the plant have transferred to the USFWS and are being operated as the Caddo Lake National Wildlife Refuge. The remaining acreage is also expected to transfer to the USFWS as restoration activities are completed.

Cleanup Exit Strategy

As RODs are finalized and remedial designs (RD) and RAs are implemented, long-term RA(O) and monitoring will continue until ramp-down.

Ramp-down/exit strategies at the sites will continue to be based on human and environmental exposure.

SITE DESCRIPTION

A no action ROD was signed by the USEPA in February 1998; the site is closed and suitable for non-residential use. A five-year review report in the form of a letter stating the use of the site remains non-residential is required. The costs for the installation-wide five-year reviews are captured under LHAAP-058. A finite period of 30 years is used where LTM is expected to continue indefinitely.

CLEANUP/EXIT STRATEGY

The LTM in the form of five-year reviews is required and will continue.

LTM	201201	204609

RIP Date: N/A

RC Date: 201007

SITE DESCRIPTION

A notification (not a remedy or LUC) has been filed in Harrison County, TX stating that the site is suitable for non-residential use in accordance with Texas Administrative Code Title 30 §335.566. A five-year review report in the form of a letter stating the use of the site remains non-residential is required. Five-year review costs are captured with LHAAP-35A(58) five-year review costs because this site falls within the boundary of LHAAP-35A(58). A finite period of 30 years is used where LTM is expected to continue indefinitely.

CLEANUP/EXIT STRATEGY

The LTM in the form of five-year reviews are required and will continue.

Site ID: LHAAP-003
Site Name: BUILDING 722-PAINT SHOP

STATUS

RD	201402	201704
RA(C)	201406	201709

RIP Date: N/A

RC Date: 201709

SITE DESCRIPTION

LHAAP-03 was a waste collection site outside of the paint shop at Building 722-P. Building 722-P was used for paint spraying and polyurethane spray coating of various items. Heavy metal-based primers, other waste solvents and contaminated rags were collected in a 55-gallon drum on a gravel pad in an open-sided shed.

The site investigation report for LHAAP-03 was completed in August 2009. The site investigation identified soil contaminated with metals exceeding medium-specific concentrations (MSC). A remedial investigation (RI)/FS was finalized to evaluate removal action alternatives for the metals-contaminated soil at LHAAP-03. A ROD is delayed until dispute is resolved with the USEPA. The RD and soil removal action will also be covered under the PBA. Five-year review costs for this site will be captured with LHAAP-35A(58) five-year review costs because this site falls within the boundary of LHAAP-35A(58).

CLEANUP/EXIT STRATEGY

This site is being addressed under a PBA through September 2017. The remedy being considered for this site is excavation and off-site disposal. Tasks to be completed before the PBA ends are completion of primary documents (ROD and RD), and accomplishment of remedy-in-place (RIP). At this time, it is expected that the post-PBA LTM will involve five-year reviews, which will be addressed as part of the remedial action for LHAAP-35A(58).

Site ID: LHAAP-004
Site Name: LHAAP PILOT WASTEWATER TREATMENT PLANT

STATUS

Parcel: NONE

IRA	200908	201111
RA(C)	201404	201711
RA(O)	201201	204609

RIP Date: 201711

RC Date: 204609

SITE DESCRIPTION

The LHAAP Pilot wastewater plant was closed under RCRA guidelines in November 1997. The installation-wide baseline ecological risk assessment in 2007 did not identify any potential risk to ecological receptors. Additional investigations after the risk assessment found unacceptable levels of mercury in soil, and perchlorate, an emerging contaminant, in soil at levels that could potentially migrate into the groundwater. A soil removal action was recommended in the 2009 engineering evaluation/cost analysis (EE/CA) for LHAAP-04. The soil removal was performed, and is documented in the final completion report, non-time critical removal action at LHAAP-04. As part of the removal action, a well was installed to sample groundwater beneath the backfilled excavation area. The results indicated that perchlorate was present in the groundwater at a concentration that exceeded the TCEQ groundwater industrial use value for perchlorate. The FS evaluating remedial alternatives for LHAAP-04 was finalized in August 2012. The RAs for this site have been funded under an existing contract. The ROD is delayed until the dispute is resolved with the USEPA. The costs for the ROD and RD are captured under the PBA. RA(O) and five-year reviews will be required. A finite period of 30 years is used where RA(O) is expected to continue indefinitely. The costs for the installation-wide five-year reviews are captured under LHAAP-058.

CLEANUP/EXIT STRATEGY

This site is being addressed under a PBA through September 2017. Tasks to be completed before the PBA ends are completion of primary documents (ROD and RD), and accomplishment of RIP. The FS was completed in 2012. The remedy being considered for this site is: in situ bioremediation and monitored natural attenuation (MNA) for groundwater, and LTM. The final remedy has not been selected yet for this site. At this time, it is expected that the post-PBA long-term RA(O) will involve MNA and LUC.

IRA	199509	200509
RA(C)	200509	200706
RA(O)	200509	209909

RIP Date: 200706

RC Date: 209909

SITE DESCRIPTION

Landfill 12 (previously called the Active Landfill), consisting of seven acres, was used for the disposal of nonhazardous industrial waste. The landfill had been used intermittently since 1963. Continuous use of the landfill began around 1978. Although the back section had been closed, the front section of the landfill continued to be used until its closure in March 1994. Site inspections (SI) conducted in 1993 concluded that an early IRA (landfill cap) was necessary to reduce further contamination to the groundwater. In 1997 the cap was completed, using treated soils from LHAAP-18 as subgrade fill. Cap maintenance started in 1998, and in 2002 the first five-year review was completed. The second five-year review was completed in 2008. The third five-year review was completed in 2013.

In 2002 the RI was completed. Groundwater analysis showed that some metals, chlorides, VOC, explosive compounds, and low levels of perchlorate were present. Surface water and sediment sample analysis showed similar contamination. Low levels of perchlorate were also detected in the soils. In three groundwater sampling rounds conducted in February 2003, February 2004, and December 2004, perchlorate was not detected with reporting limits of four micrograms per liter (ug/L) in the first two rounds, and only detected twice when a method with a lower reporting limit (0.2 ug/L) was used. Chromium in groundwater is now believed to be related to stainless steel well casings. In January 2006 the 12 wells with stainless steel casings and screen were removed. In 2006, five new wells were installed for long-term monitoring using polyvinyl chloride casing and screen. Results of subsequent groundwater sampling supported the postulation that the stainless steel casing in the monitoring wells was the source of the chromium.

In 2005 the FS was finalized. The recommended final remedy is MNA with LUCs consisting of cap protective provisions and groundwater restrictions. In August 2006 sampling to support MNA began. The PP addressed human and ecological risk. The ROD has been signed (July 2006), and in June 2007 the RD addendum was signed. The surrounding sediment and surface water were evaluated as part of the plant-wide ecological risk assessment and no chemicals of concern were identified.

Post-PBA (FY2017 and out-years) actions will include MNA with LUC consisting of cap protective provisions and groundwater restrictions. The expected duration of RA(O) is 118 years based on the groundwater model from the remedial design. Ten years of RA(O) will have been completed by the end of the PBA, leaving 108 years beyond FY17; however, AEDB-R limits phase schedule extension to 2099 thus 82 years are reported. The costs for the installation-wide five-year reviews are captured under LHAAP-058.

CLEANUP/EXIT STRATEGY

Site ID: LHAAP-012
Site Name: ACTIVE LANDFILL (SWMU 12)

As a part of RA(O), cap maintenance, MNA, and five-year reviews will be funded under the PBA through September 2017. Post-PBA activities will be limited to long-term RA(O) and five-year reviews to review MNA progress and any new site information.

Site ID: LHAAP-016

IRA	199410	200509
RA(C)	200508	201712
RA(O)	200508	204609

RIP Date: 201712

RC Date: 204609

SITE DESCRIPTION

Landfill 16 (formally called the old landfill), consisting of about 22 acres, was originally used to dispose of products generated from the TNT wastewater treatment plant (WWTP); however, a variety of waste was disposed of in the landfill until the 1980s. This waste may have included burned rocket motor casings, substandard TNT, barrels of chemicals, oil, paint, scrap iron and wood. VOCs and metals above action levels have been found in the soil, surface water and groundwater around the site. Low levels of explosive compounds were detected in the groundwater.

SIs conducted in 1993 concluded that an early IRA (landfill cap) was necessary to reduce further contamination to the groundwater. The cap was completed in 1998, using treated soils from LHAAP-18 as subgrade fill. In late-1997, as part of the treatability study, eight extraction wells were installed to prevent contaminated groundwater from impacting Harrison Bayou. This system is still in operation; however, extracted water volume is low. Groundwater extracted from the Landfill 16 containment system is piped to the LHAAP-18 groundwater treatment plant (GWTP).

Perchlorate was first detected in groundwater at this site in 2000. VOCs and perchlorate have been detected in the surface water of Harrison Bayou.

In 2002 the RI was completed along with a five-year review. In March 2002 a final interim FS for Site 16 was issued. Under the PBC, a draft FS addendum to the March 2002 interim FS was submitted in February 2007. The FS was finalized in March 2010. A preliminary MNA evaluation was completed in 2007. The second five-year review was completed in 2008. The third five-year review was completed in 2013. The PP was finalized September 2010. Quarterly surface water sampling of the Harrison Bayou area has not shown significant contamination. The ROD is delayed until the dispute is resolved with the USEPA. The ROD will include cap maintenance, in situ bioremediation, biobarriers, MNA and LUCs.

An environmental security technology certification program research and development project for enhanced in situ bioremediation (VOCs, perchlorate and explosives in groundwater) was started in 2003 and continued to 2008. Ecological concerns most likely will be addressed with the final remedy at this site. Post-PBA actions will include groundwater monitoring and LUC RA(O). A finite period of 30 years is used where RA(O) is expected to continue indefinitely. The costs for the installation-wide five-year reviews are captured under LHAAP-058.

CLEANUP/EXIT STRATEGY

Site ID: LHAAP-016
Site Name: OLD LANDFILL (SWMU 16)

This site is being addressed under a PBA through September 2017. The remedy being considered for this site is passive biobarriers, in situ bioremediation and MNA for groundwater, and LTM. Tasks to be completed before the PBA ends are completion of primary documents (ROD and RD), and accomplishment of remedy-in-place (RIP). At this time, it is expected that the post-PBA long-term RA(O)will involve MNA with maintenance of the cap and LUC.

Site ID: LHAAP-017
Site Name: NO 2 FLASHING AREA BRN GROUND(SWMU 17)

STATUS

Parcel: Burning Ground (FWS) (380 acres)

Regulatory Driver: CERCLA

RI/FS	199008	201701
RD	201402	201704
RA(C)	201406	201709
RA(O)	201707	204609

RIP Date: 201709

RC Date: 204609

SITE DESCRIPTION

This site (about 500 by 600 feet) was used to burn bulk TNT, photoflash powder, and reject material from Universal Match Corporation's production processes. From 1959 until 1980 the site was operated as a burning ground. In 1959 buildings razed at Site 29 (the former TNT production area) were burned at Burning Ground No. 2/Flashing Area (LHAAP-17). This site is situated about 400-500 feet southwest of Burning Ground No. 3.

In 1984 waste residues were removed and the area grassed over. VOCs and explosive compounds were found in the groundwater. Explosive compounds were found in the soil. In 2000 perchlorate was detected at this site [in groundwater at 300 parts per million (ppm), but less in soil].

In 2002 the RI was completed and a draft FS was prepared. In 2004 additional data gap studies were completed. A revised draft FS was submitted in 2009 by the PBC and the FS was finalized in 2010. The PP was finalized in May 2010.The ROD is delayed until the dispute is resolved with the USEPA. The ROD will include soil removal, extraction and treatment of groundwater, MNA and LUCs.

A research and development project for enhanced in situ-bioremediation (VOCs, perchlorate and explosives in soil and groundwater) was started in 2002 and completed in 2004. Results indicate that perchlorate contamination was reduced. An additional intermediate well was installed at the site in February 2008.

Post-PBA actions during RA(O) will involve monitoring of MNA. A finite period of 30 years is used where RA(O) is expected to continue indefinitely. The costs for the installation-wide five-year reviews are captured under LHAAP-058.

CLEANUP/EXIT STRATEGY

This site is being addressed under a PBA through September 2017. The remedy being considered for this site is groundwater extraction, followed by MNA for groundwater, and excavation and disposal for soil. Tasks to be completed before September 2017 are completion of primary documents (ROD and RD), and accomplishment of RIP. At this time, it is expected that the post-PBC long-term RA(O) will involve MNA and LUC.

RA(O)	200508	204609

RIP Date: 202106

RC Date: 204609

SITE DESCRIPTION

This 34.5 acre site, also known as Burning Ground No. 3, began operations in 1955. It was used for the treatment, storage, and disposal of solid and liquid explosives, pyrotechnics, and combustible solvent wastes by open burning, open detonation, and burial. The unlined evaporation pond (UEP) (LHAAP-024) was constructed in 1963 within Burning Ground No. 3. Explosive compounds, VOCs, and metals were detected in the soils and groundwater. In 1998 perchlorate was detected in the groundwater. In 1986 sludge from the UEP was removed and the area was capped. Quarterly monitoring has been conducted at the site since closure of the UEP.

In May 1995 an IRA ROD was signed. This IRA addressed soil and shallow groundwater contamination. In 1997, 30,000 cubic yards (cy) of soil were excavated and treated. The treated soil was used as fill in LHAAP-012 and -016. A GWTP, with approximately 5,000 feet of interception collection trenches, has been installed to control migration of contaminated groundwater. After treatment the extracted groundwater is discharged into Harrison Bayou. In 1999 perchlorate was detected at this site and a fluidized bed reactor treatment system was installed.

In 2002 the RI was completed, followed by a draft FS. In September 2007 the PBC contractor began an optimization pilot study for the groundwater extraction system with a report completed in February 2009. A post-screening investigation (PSI) work plan was finalized in 2013 to address site data gaps and support completion of the RI/FS. The PSI work has continued into 2016 and the revised FS is planned to be completed in 2017.

Post-PBC actions are expected to include RD, RA(C) and review of MNA progress. A finite period of 30 years is used where RA(O) is expected to continue indefinitely. The costs for the installation-wide five-year reviews are captured under LHAAP-058.

CLEANUP/EXIT STRATEGY

This site is being addressed under a PBA through September 2017. The remedy being considered for this site is optimization of the groundwater extraction system, bioaugmentation, and MNA. Tasks to be completed before September 2017 are completion of primary documents (FS, PP, ROD, RD) and accomplishment of RIP and continued RA(O).

The final remedy has not been selected yet for this site. At this time, the post-PBC long-term RA(O) is expected to include groundwater extraction, bioremediation and five-year reviews.

RC Date: 204609

SITE DESCRIPTION

This three-acre UEP was constructed in 1963 within Burning Ground No. 3. Explosive compounds, VOCs, and metals were detected in the soils and groundwater. In 1999, perchlorate was detected in the groundwater. In 1986, sludge from the UEP was removed and the area was capped. Quarterly monitoring has been conducted at the site since closure of the UEP.

In May 1995, an IRA ROD was signed. This IRA addressed soil and shallow groundwater contamination. In 1997, 30,000 cy of soil were excavated and treated. The treated soil was used as fill in LHAAP-012 and LHAAP-016. A GWTP, with approximately 5,000 feet of interception collection trenches, has been installed to control migration of contaminated groundwater. After treatment, the extracted groundwater is discharged into Harrison Bayou. In 1999 perchlorate was detected at this site and in 2001 a fluidized bed reactor treatment system was installed.

In 2002 the RI was completed, followed by a draft FS. In September 2007 the PBC contractor began an optimization study for the groundwater extraction system with a report on the results completed February 2009. A PSI work plan was finalized in 2013 to address site data gaps and support completion of the RI/FS. The PSI work has continued into 2016 and the revised FS is planned to be completed in 2017.

Post-PBC actions are currently expected to involve completion of RD, RA(C) and review of MNA progress. A finite period of 30 years is used where RA(O) is expected to continue indefinitely. The costs for the installation-wide five-year reviews are captured under LHAAP-058.

CLEANUP/EXIT STRATEGY

This site is being addressed under a PBA through September 2017. As with LHAAP-018, the remedy being considered for this site is optimization of the groundwater extraction system, bioaugmentation and MNA. Tasks to be completed before September 2017 are completion of primary documents (FS, PP, ROD, RD) and accomplishment of RIP and continued RA(O).

The final remedy has not been selected yet for this site but the post-PBC long-term RA(O) is expected to include groundwater extraction, bioremediation and five-year reviews.

Site ID: LHAAP-029
Site Name: FORMER TNT PRODUCTION AREA(SWMU 29)

STATUS

Parcel: NONE

Regulatory Driver: CERCLA
RRSE: HIGH

Contaminants of Concern: Munitions constituents (MC), Perchlorate, Volatiles (VOC)

Media of Concern: Groundwater, Sediment, Soil, Surface Water

RA(C)	200508	202003
RA(O)	200508	204609

RIP Date: 202003

RC Date: 204609

SITE DESCRIPTION

The former TNT production area, consisting of about 85 acres, was in operation from April 1943 to August 1945 as a six-line plant, with a supporting acid plant. The plant produced 180 million kilograms of TNT throughout the period of operation. A bulk toluene storage area, servicing the TNT production area, was located adjacent to the production area. The TNT wastewater (red water) from the production of the TNT was sent through wooden pipelines to a storage tank and pump house, and then to the TNT WWTP (LHAAP-032). Cooling water (blue water) from the production area ran through main lines and into an open ditch. In 1959, the structures, except for the foundations, were demolished and removed. Through the late-1980s a portion of the northeast corner of the site (approximately two acres) was used for the washout of Pershing 1 and 2 rocket motor casings using trichloroethylene (TCE) and methylene chloride.

Explosive compounds have been detected in the soil, surface water, sediment, and groundwater samples. High concentrations of VOCs (including TCE and methylene chloride) have been detected in the groundwater with the highest concentrations in the intermediate hydrostratigraphic unit, and methylene chloride, dense non-aqueous phase liquid is suspected. In 2000 perchlorate was first detected in the soil and in the groundwater (at 88 ppm) at this site.

In 2002, the RI was completed. In FY2005 field sampling for soils was conducted. In FY2006, six wells were installed and sampled. Sediment samples were also collected from waste lines and outfall ditches. A revised draft FS was submitted in 2008 and was finalized in 2010. The ROD is delayed until the dispute is resolved with the USEPA. The ROD currently includes soil removal, flushing and plugging lines, in situ chemical oxidation treatment of groundwater, MNA and LUCs. A finite period of 30 years is used where RA(O) is expected to continue indefinitely. Fieldwork to support an addendum to the RI/FS for LHAAP-29 was completed in 2013 and the RI/FS addendum is underway. The costs for the installation-wide five-year reviews are captured under LHAAP-058.

LHAAP-49, the former acid plant (also known as former acid storage), was originally funded under LHAAP-29 due to the association in plant function. This was the location where acids were received and prepared for use in the TNT manufacturing process. The final site evaluation was finalized in 2009 and the ROD was finalized in 2010 and is reported under LHAAP-49.

CLEANUP/EXIT STRATEGY

This site is being addressed under a PBA through September 2017. The remedy being considered for this site is in situ groundwater remediation followed by MNA, flushing and plugging lines, and excavation and disposal for soil and sediments. Tasks to be completed before September 2017 are completion of primary documents (ROD, RD), and accomplishment of RIP. The final remedy has not been selected yet for this site. At this time, the post-PBA RA(O) is expected to involve MNA and LUC.

Site ID: LHAAP-035
Site Name: SUMPS (145) VARIOUS

STATUS

Parcel: East FIA II(FWS) (175 acres),Production Area Ib (FWS) (107.59 acres),Production Area Ia (FWS) (456.72 acres)

RD	200508	201011
RA(C)	200508	201011
LTM	201201	204609

RIP Date: N/A

RC Date: 201011

SITE DESCRIPTION

This site contained 125 industrial wastewater sumps. The sumps were located in different production areas within LHAAP. Many of the sumps were removed or closed in 1996.

Several buildings at sites where sumps were located have a history of perchlorate use. Perchlorate contamination at these sites has been identified in the soil, surface water and groundwater. Remedial action-construction RA(C) consisted of soil removal around sumps.

In 2002, the RI was completed and in late FY2003 the initial perchlorate assessment was completed. Additional soil sampling, for the sumps, was completed in fall 2006. The NFA DD was signed in November 2010. A notification (not a remedy or LUC) has been filed in Harrison County, TX stating that the site is suitable for non-residential use in accordance with Texas Administrative Code Title 30 §335.566. A five-year review report in the form of a letter stating the use of the site remains non-residential is required. The costs for the installation-wide five-year reviews are captured under LHAAP-058. A finite period of 30 years is used where LTM is expected to continue indefinitely.

The following are associated with LHAAP-35 in AEDB-R because there were sumps at the sites; however, they are being addressed as separate sites for other environmental issues [i.e. five-year reviews, RA(O)/LTM]:
LHAAP-002 LHAAP-003 LHAAP-004 LHAAP-006 LHAAP-007 LHAAP-036
LHAAP-058 LHAAP-060 LHAAP-65 LHAAP-068 (PBC) LHAAP-008 LHAAP-037 (TERC)

CLEANUP/EXIT STRATEGY

LTM in the form of five-year reviews is required. Soil that was found to be contaminated with perchlorate at sites where sumps were located is being addressed at those individual sites (i.e., LHAAP-047 and LHAAP-050).

RA(O)	201201	204609

RIP Date: 201309

RC Date: 204609

SITE DESCRIPTION

This site is a collection point for spent solvents from the quality assurance (QA) lab. It consists of one 55-gallon drum set on a concrete pad. The site is included in the Group 4 RI/FS. The ROD was finalized in August 2010 and included MNA and LUCs for the site. The RD was finalized in August 2011. The remedial action work plan (RAWP) was finalized in 2013. RIP was achieved in September 2013. The RA(O) was on hold while a two-year bioplug demonstration was implemented at the site. The bioplug demonstration was completed at the end of 2014 and the aquifer is currently being monitored for return to pre-study conditions before proceeding with RA(O). A finite period of 30 years is used where RA(O) is expected to continue indefinitely. The costs for the installation-wide five-year reviews are captured under LHAAP-058.

CLEANUP/EXIT STRATEGY

This site is being addressed under a PBA through September 2017. Actions to be completed before the PBA ends are accomplishment of RA(O) including institutional controls (LUC). The RD completed in 2011 includes the following remedies for this site: MNA for groundwater, and RA(O). At this time, it is expected that the post-PBA long-term RA(O) will involve MNA and LUC.

SITE DESCRIPTION

This site consists of 800 acres with 58 bunkers and two buildings used for storage of munitions. An SI conducted by US Army Center for Health, Promotion and Preventive Medicine (USACHPPM) (now known as the Public Health Command), determined perchlorate contamination. The RI was completed in September 2003. The final evaluation of LHAAP-45 surface soil analytical data was finalized in September 2004. The site received USEPA concurrence for no further environmental investigation necessary. The site is closed and suitable for industrial use. A five-year review report in the form of a memorandum report stating the use of the site remains industrial will be required for internal Army records. The costs for the installation-wide five-year reviews are captured under LHAAP-058. A finite period of 30 years is used where LTM is expected to continue indefinitely.

CLEANUP/EXIT STRATEGY

LTM in the form of five-year reviews is required.

RIP Date: 201304

RC Date: 204609

SITE DESCRIPTION

LHAAP-46, also known as Plant 2, had facilities for production of JB-2 propellant fuel from 1944-1945 and was used to produce pyrotechnic ammunition, such as photoflash bombs, simulators, hand signals, and tracers for 40mm ammo from 1952-1956. Plant 2 was reactivated to produce pyrotechnic and illuminating devices from 1964 to 1997. Site investigations determined that groundwater was contaminated with VOCs. The ROD was finalized in September 2010 and includes MNA and LUCs for the site. A notification (not a remedy or LUC) will be filed in Harrison County, TX stating that the site is suitable for non-residential use in accordance with Texas Administrative Code Title 30 §335.566. A five-year review report in the form of a letter stating the use of the site remains non-residential will be required. The RD was finalized in September 2011. The RAWP was finalized in 2013 and RIP was achieved in April 2013. This site is in RA(O). A finite period of 30 years is used where RA(O) is expected to continue indefinitely. The costs for the installation-wide five-year reviews are captured under LHAAP-058.

CLEANUP/EXIT STRATEGY

This site is being addressed under a PBA through September 2017. The remedy selected for this site is MNA for groundwater. Tasks to be completed before September 2017 are accomplishment of RA(O). The final remedy has been selected for this site. At this time, it is expected that the post-PBA RA(O) will involve monitoring MNA and LUC.

RIP Date: 201803

RC Date: 204609

SITE DESCRIPTION

LHAAP-47, also known as Plant 3, was used from 1954 to the early-1980s to produce rocket motors. Some of the rocket motor facilities converted to produce pyrotechnic and illumination devices, and continued this operation until 1997. Site investigations determined that groundwater was contaminated with VOCs, perchlorate, and metals and a soil source for perchlorate was identified. The FS evaluating remedial alternatives for LHAAP-47 was finalized in July 2011. The RAs for this site have been funded under an existing contract. The ROD is delayed until the dispute is resolved with the USEPA. A finite period of 30 years is used where RA(O) is expected to continue indefinitely. The costs for the installation-wide five-year reviews are captured under LHAAP-058.

CLEANUP/EXIT STRATEGY

This site is being addressed under a PBA through September 2017. The remedy being considered for this site includes bioaugmentation, biobarriers and MNA. Tasks to be completed before September 2017 are completion of primary documents (ROD and RD) and accomplishment of RIP and continued RA(O).

The final remedy has not been selected yet for this site. At this time, the post-PBC long-term RA(O) is expected to include MNA and five-year reviews.

RIP Date: 201309

RC Date: 204609

SITE DESCRIPTION

This site of about one acre received wastewater from the sumps at Plants 2 and 3 from 1955 to the early-1970s. Washout of ammonium perchlorate containers was also performed on this site.

VOCs and perchlorate were detected in the soil samples. VOCs, metals and perchlorate were detected in groundwater. The VOCs and perchlorates in groundwater pose an unacceptable risk. In 2004 an additional data gap sampling was completed and in February 2008 an additional shallow well was installed downgradient of this site.

In 2002, the RI was completed and the FS was finalized in 2010. The ROD was finalized in 2010. The ROD includes soil removal, MNA and LUCs (groundwater use restriction) for the site. A notification (not a remedy or LUC) will be filed in Harrison County, TX stating that the site is suitable for non-residential use in accordance with Texas Administrative Code Title 30 §335.566. A five-year review report in the form of a letter stating the use of the site remains non-residential will be required. The RD was finalized in September 2011. The RAWP was finalized in 2013. RIP was achieved in September 2013. This site is in RA(O). A finite period of 30 years is used where RA(O) is expected to continue indefinitely. The costs for the installation-wide five-year reviews are captured under LHAAP-058.

CLEANUP/EXIT STRATEGY

This site is being addressed under a PBA through September 2017. The remedy selected for this site is MNA for groundwater, and excavation and disposal for soil. Tasks to be completed before September 2017 are accomplishment RA(O). The final remedy has been selected for this site. At this time, it is expected that the post-PBA RA(O) will involve MNA and LUC.

RRSE:

Phases	Start	End
PA	199005	199008
SI	199502	199506
RI/FS	199506	200812
LTM	201201	204609

RIP Date: N/A

RC Date: 200812

SITE DESCRIPTION

A transformer at Building 401 dripped oil for approximately one year. The transformer did not contain PCBs, so NFA was required. An NFA DD was signed in December 2008. A notification (not a remedy or LUC) has been filed in Harrison County, TX stating that the site is suitable for non-residential use in accordance with Texas Administrative Code Title 30 §335.566. A five-year review report in the form of a letter stating the use of the site remains non- residential is required. The costs for the installation-wide five-year reviews are captured under LHAAP-058. A finite period of 30 years is used where LTM is expected to continue indefinitely.

CLEANUP/EXIT STRATEGY

LTM in the form of five-year reviews is required.

Site ID: LHAAP-067
Site Name: ABOVE GROUND STORAGE TANK

STATUS

Parcel: NONE

Regulatory Driver: CERCLA
RRSE: MEDIUM

Contaminants of Concern: Volatiles (VOC)

Media of Concern: Groundwater

Phases	Start	End

RI/FS	200110	201006
RD	201105	201108
RA(C)	201201	201304
RA(O)	201201	204609

RIP Date: 201304

RC Date: 204609

SITE DESCRIPTION

This site consisted of seven aboveground storage tanks (AST) containing No. 2 fuel oil, kerosene or solvents. The ASTs had earthen dikes sufficient to contain a potential spill. Motor fuel tanks were registered with the state and have been removed. Central Creek runs to the south of this site.

In 2001, VOCs (TCE, 1,1-dichloroethene, 1,2-dichloroethane, 1,1,2-trichloroethane) were detected in the groundwater. The data indicates that the impact is limited.

In 2002, the RI was completed and in 2004 additional sampling was conducted, with the final FS completed in August 2005. The ROD was finalized in August 2010 and included MNA and LUCs (groundwater use restriction) for the site. A notification (not a remedy or LUC) will be filed in Harrison County, TX stating that the site is suitable for non-residential use in accordance with Texas Administrative Code Title 30 §335.566. A five-year review report in the form of a letter stating the use of the site remains non-residential will be required. The RD was finalized in August 2011. The RAWP was finalized in 2013 and RIP was achieved in April 2013. This site is in RA(O). A finite period of 30 years is used where RA(O) is expected to continue indefinitely. The costs for the installation-wide five-year reviews are captured under LHAAP-058.

CLEANUP/EXIT STRATEGY

This site is being addressed under a PBA through September 2017. Actions to be completed before the PBA ends are accomplishment of RA(O). The ROD completed in 2010 selected the following remedies for this site: MNA for groundwater, and RA(O). At this time, it is expected that the post-PBA long-term RA(O) will involve MNA and LUC.

Site ID: LHAAP-068
Site Name: MOBILE STORAGE TANK PARKING AREA

Phases	Start	End
PA	199005	199008
RI/FS	199008	200812
LTM	201201	204609

RIP Date: N/A

RC Date: 200812

SITE DESCRIPTION

This site was corrected under RCRA guidelines in 1993. An NFA DD was signed in December 2008. A notification (not a remedy or LUC) has been filed in Harrison County, TX stating that the site is suitable for non-residential use in accordance with Texas Administrative Code Title 30 §335.566. A five-year review report in the form of a letter stating the use of the site remains non-residential is required. Five-year review costs are captured with LHAAP-35A(58) five-year review costs because this site falls within the boundary of LHAAP-35A(58). A finite period of 30 years is used where LTM is expected to continue indefinitely.

CLEANUP/EXIT STRATEGY

LTM in the form of five-year reviews is required.

Site ID: LHAAP-069

Phases	Start	End
PA	199005	199008
RI/FS	199008	201401
LTM	201401	204609

RIP Date: N/A

RC Date: 201401

SITE DESCRIPTION

LHAAP-069 was corrected under RCRA guidelines in 1993. A NFA DD was finalized in early 2014. A notification will be filed in Harrison County, TX stating that the site is suitable for non-residential use in accordance with Texas Administrative Code Title 30 §335.566. Because LHAAP-069 is entirely contained within the LHAAP-35A(58) land use control boundary, this requirement is being met under LHAAP-35A(58). A five-year review report in the form of a letter stating the use of the site remains non-residential will be required. Five-year review costs are captured with LHAAP-35A(58) five-year review costs because this site falls within the boundary of LHAAP-35A(58). A finite period of 30 years is used where LTM is expected to continue indefinitely.

CLEANUP/EXIT STRATEGY

Post-PBA activities will be limited to five-year review reports in the form of a letter stating the use of the site remains non-residential.

LTM	201509	204609

RIP Date: N/A

RC Date: 201509

SITE DESCRIPTION

There was a report of spill of boxes of TNT at LHAAP-070; however, SIs revealed no visual evidence of TNT contamination. NFA is required. A DD was finalized in September 2015. Limited monitoring in the form of certification of proper land use every five years is required for this site. The costs for the installation-wide five-year reviews are captured under LHAAP-058. A finite period of 30 years is used where LTM is expected to continue indefinitely.

CLEANUP/EXIT STRATEGY

Post-PBA activities will be limited to five-year review reports in the form of a letter stating the use of the site remains non-residential.

LTM	201509	204609

RIP Date: N/A

RC Date: 201509

SITE DESCRIPTION

An oil tank spill occurred at Building (Bldg) 813 in 1978. The spill was contained before it could reach Central Creek. An NFA DD was finalized in September 2015. Limited monitoring in the form of certification of proper land use every five years is required for this site. The costs for the installation-wide five-year reviews would be captured under LHAAP-058. A finite period of 30 years is used where LTM is expected to continue indefinitely.

CLEANUP/EXIT STRATEGY

Post-PBA activities will be limited to five-year review reports in the form of a letter stating the use of the site remains non-residential.

RA(O)	201203	201809

RIP Date: 201803

RC Date: 201809

Contaminants of Concern: Explosives, Metals, Perchlorate, Volatiles (VOC)

Media of Concern: Groundwater

SITE DESCRIPTION

The PBC was awarded in March 2012. The goal was to achieve RIP by September 2013 for the following sites and RA(O)/LTM upon achievement:
- LHAAP-03: Building 722 paint shop
- LHAAP-04: Pilot WWTP
- LHAAP-16: Old landfill (solid waste management unit (SWMU) 16)
- LHAAP-17: No. 2 flashing area/burning ground (SWMU 17)
- LHAAP-18: Burning ground/washout pond (SWMU 18)
- LHAAP-24: Former UEP (SWMU 24)
- LHAAP-29: Former TNT production area (SWMU 29)
- LHAAP-37: Chemical laboratory
- LHAAP-46: Plant 2/pyrotechnic operation
- LHAAP-47: Plant 3 Area, solid rocket fuel motor production
- LHAAP-50: Former waste disposal facility
- LHAAP-58: Maintenance complex
- LHAAP-67: AST farm

The RIP is delayed for several sites until the dispute is resolved with the USEPA.

It is currently assumed that the period of performance for the PBC will be extended through FY18 to account for these delays.

The PBC also covers LTM and LUC maintenance for:
- LHAAP-12: Active landfill
- LHAAP-001-R-01: South test area
- LHAAP-003-R-01: Ground signal test area

The PBC also covers a CERCLA 121 (c) review in 2013 for all sites with RIP. The costs for the out-year installation-wide five-year reviews are captured under LHAAP-058.

CLEANUP/EXIT STRATEGY

These sites are being addressed under a PBA through September 2017 with anticipation of potential period of performance

Site ID: PBC Longhorn
Site Name: PBC at Longhorn

extension to September 2020. Any follow-on actions will be funded under a separate contract mechanism.

Date of MMRP completion including Long Term Management (LTM): 204609

MMRP Contamination Assessment

Contamination Assessment Overview

In May 2003 the Phase 3 Army range inventory was completed at LHAAP. The inventory identified three sites as eligible for the Military Munitions Response Program (MMRP). The Phase 3 inventory serves as the preliminary assessment (PA) under CERCLA. In June 2005 an SI was completed. An EE/CA was finalized on the three sites in October 2007. The EE/CA indicated that no Department of Defense (DoD) action was required for LHAAP-002-R-01. An interim removal action was funded for the two other sites and was completed in 2009. In March 2008 an explosives safety submission (ESS) was finalized for the three sites. The final MC summary report was completed in 2011 for LHAAP-001-R-01 and LHAAP-003-R-01. In 2012 the Pistol Range (LHAAP-004-R-01) was added to the MMRP. A soil removal action was completed at LHAAP-004-R-01 and an NFA ROD was signed in September 2010.

Cleanup Exit Strategy

Limited groundwater monitoring for perchlorate and five-year reviews are planned for LHAAP-001-R-01 and LHAAP-003-R-01. Five-year reviews are planned for LHAAP-004-R-01. The five-year reviews will ensure that the site is inspected, LUCs are still in place and that any new data regarding the condition of the site is reviewed.

SITE DESCRIPTION

This site of approximately 79 acres is also known as environmental site LHAAP-027 and is located southeast of Avenue P and the magazine area, at the end of 70th street, near the southern boundary of LHAAP. The site was constructed in 1954 and used by Universal Match Corporation to test photoflash bombs that were produced at the facility until about 1956. The bombs were tested by exploding them in the air over an elevated, semi-elliptical earthen test pad. Bombs awaiting testing were apparently stored in three earth-covered concrete bunkers. The bombs tested were 150-pound M120/M120A photoflash bombs, filled with photoflash powder and containing a black powder booster charge for bursting the bomb with a timed nose fuse.

The location of the site, for this purpose, was not ideally suited to the task, as fragments from this testing landed beyond the installation boundary. By June 1954, static testing of photoflash bombs had been discontinued because of the possibility of damage and injuries beyond the installation boundary. During the late-1950s, illuminating signal devices were also demilitarized within pits at this site. During the early-1960s, leaking production items were demilitarized in the area. The May 1997 final RI report for Group I sites indicates approximately 52,000 one-half and one-pound photoflash cartridges were demilitarized at the site in the early-1980s.

In 1982, investigations included installation and sampling of two wells and three shallow soil samples. Explosives, metals, chloride and sulfate were detected above background levels in the soil samples. In January 1998, an NFA ROD was signed by the USEPA, based upon the site-specific risk analysis for human and ecological exposure to the contaminants of potential concern for the site.

In 2004, the Explosive Ordnance Disposal (EOD) unit at Fort Polk blew in place (BIP) one 155 mm white phosphorous (WP) round. The identification of this round as a live 155 mm WP round is suspect. Plexus, in the 2005 environmental baseline survey (EBS) (page 46), states that "confirmatory sampling (CS) WP operations at LHAAP were assembly and packout operations only; no loading of these materials was conducted at the site. The WP rounds were stored and worked in the east line area of Plant 2 [US Army Toxic and Hazardous Materials Agency (USATHAMA), 1980]." Testing of the payload at LHAAP would not be part of the mission, since it was not manufactured at Longhorn. Others indicate that it was a 105 or 81 mm smoke round.

A reported demolition site was identified on the northwest perimeter of this site. This was added to the investigation. In FY2008 an EE/CA report was completed, approved and signed. In October 2007 the report was finalized. An IRA has been funded with the final ESS completed in March 2008. The removal action was completed in 2009. The ROD is delayed until the dispute is resolved with the USEPA. The ROD will include limited groundwater monitoring for perchlorate and LUCs of restrictions against digging and residential use and sign maintenance. The costs for the ROD and RD are captured under the PBA. Five-year reviews are required. The costs for the installation-wide five-year reviews are captured under LHAAP-058. The costs reported under this site include out-year LUC maintenance costs for a finite period of 30 years where LTM phase is expected to continue indefinitely.

Site ID: LHAAP-001-R-01
Site Name: SOUTH TEST AREA / BOMB TEST AREA

CLEANUP/EXIT STRATEGY

Five-year reviews are planned for this site. These five-year reviews will ensure that the site is inspected and that any new data regarding the condition of the site is reviewed. The LUCs are in place and will be formally enforced upon ROD signature.

Site ID: LHAAP-003-R-01
Site Name: GROUND SIGNAL TEST AREA

RC Date: 201701

SITE DESCRIPTION

This site, also known as environmental site LHAAP-054, encompasses approximately 80 acres and is located in the southeastern portion of LHAAP. Starting in April 1963 the site was used intermittently for aerial and on-ground testing and destruction of a variety of devices, including red phosphorus smoke wedges, infrared flares, illuminating 60 and 81 mm mortar shells, illuminating 40 to 155 mm cartridges, button bombs, and various types of explosive simulators. The site was also used intermittently over a 20-year period for testing and burnout of rocket motors from Nike-Hercules, Pershing, and Sergeant missiles. Around 1970, one of the Sergeant rocket motors exploded in an excavated pit near the center of the site. Debris was reportedly placed in the resulting crater and backfilled. From late-1988 through 1991, the site was also used for burnout of rocket motors in Pershing missiles destroyed in accordance with the INF Treaty between the United States (US) and the former Soviet Union. In January 1998 an NFA ROD for hazardous, toxic and radioactive waste (HTRW) under CERCLA was signed. The site is currently undeveloped.

In December 2004, the EOD unit at Fort Polk BIP 105 mm and 81 mm rounds. In FY2008 an EE/CA report was completed, approved and signed. In October 2007 the report was finalized. An IRA has been funded with the final ESS completed in March 2008. The removal action was completed in 2009. The ROD is delayed until the dispute is resolved with the USEPA. The ROD will include limited groundwater monitoring for perchlorate LUCs of restrictions against digging and residential use and sign maintenance. The costs for the ROD and RD are captured under the PBA. Five-year reviews are required. The costs for the installation-wide five-year reviews are captured under LHAAP-058. The costs reported under this site include out-year LUC maintenance costs for a finite period of 30 years where LTM phase is expected to continue indefinitely.

CLEANUP/EXIT STRATEGY

Five-year reviews are planned for this site. These five-year reviews will ensure that the site is inspected and that any new data regarding the condition of the site is reviewed. The LUCs are in place and will be formally enforced upon ROD signature.

Site ID: LHAAP-004-R-01
Site Name: PISTOL RANGE

STATUS

Parcel: Pistol Range (FWS) (1 acres)

Regulatory Driver: CERCLA

MRSPP Score: No longer required

Contaminants of Concern: Metals

Media of Concern: Soil

Phases	Start	End
PA	200809	200902
RI/FS	201005	201008
IRA	200912	201001
LTM	201201	204609

RIP Date: N/A

RC Date: 201008

SITE DESCRIPTION

The former pistol range was known to have been used by LHAAP security personnel for small arms target qualification and recertification. The pistol range was established in the 1950s and used intermittently through 2004. Site investigation results identified areas where the surface and near surface soil was contaminated with lead at concentrations that exceeded the TCEQ soil MSCC for industrial use. A non-time critical removal action was completed. The IRA for this site became the FRA. An NFA ROD was finalized in August 2010. A notification (not a remedy or LUC) has been filed in Harrison County, TX stating that the site is suitable for non-residential use in accordance with Texas Administrative Code Title 30 §335.566. A five-year review report in the form of a letter stating the use of the site remains non-residential is required. The costs for the installation-wide five-year reviews are captured under LHAAP-058. A finite period of 30 years is used where LTM is expected to continue indefinitely.

CLEANUP/EXIT STRATEGY

LTM in the form of five-year reviews is required.

Community Involvement

Technical Review Committee (TRC): 199203

Community Involvement Plan (Date Published): 201311

Restoration Advisory Board (RAB): RAB established 2004

RAB Adjournment Date:

RAB Adjournment Reason:

Additional Community Involvement Information

While the Army leads the Installation Restoration Program (IRP) at LHAAP, a close working relationship with the regulatory community has been developed. The local public community has been involved in the past through the TRC process.

In April 1996 and in 1998 formation of a RAB was attempted; however, community involvement in the TRC process was determined to be sufficient for community needs. In September 2004, in response to public notices and private mailings, a group of citizens attended a RAB-interest meeting. Enthusiastic support resulted in the first RAB meeting in December 2004. It was well attended. The RAB has created its own symbol, finalized its charter, and elected a co-chair. The RAB meets quarterly and public meetings are held for each PP. These will continue as needed.

An update to the community involvement plan was finalized in 2013.

Subject:	**Final Minutes, Monthly Managers' Meeting, Longhorn Army Ammunition Plant (LHAAP)**
Location of Meeting:	**LHAAP Army Trailer; Teleconference – 888-369-1427, passcode 4887611**
Date of Meeting:	**October 20, 2016 – 10:00 AM**

Attendees:

Army BRAC:	Rose Zeiler (RMZ)
AEC:	Nick Smith (NS)
EPA:	Rich Mayer (RM) by phone, Kent Becher (KB) (USGS Liaison)
TCEQ:	April Palmie (AP)
USACE:	Aaron Williams (AW), Rick Smith (RS)
AECOM:	Debra Richmann (DR), Marwan Salameh (MS), Elspeth Sharp (ES), JoLynn Snow (JS) by phone
USFWS:	Paul Bruckwicki (PB)

Welcome **RMZ**

Action Items From Last MMM
AECOM

- Provide group with Draft MMM minutes from the September 2016 meeting. **Complete –** Draft September MMM minutes were submitted to EPA and TCEQ on 9/26/16. TCEQ had no comments; EPA provided two minor comments that are addressed in the final meeting minutes.
- Determine if temporary well(s) installed by Shaw in the vicinity of LHAAP-47 monitoring wells 24 and 25 still exist, and if so, abandon them. **Partially Complete** – A visual inspection on 9/14/16 identified one 1-inch temporary well in the area. The 1-inch well would not have been developed, but it does have a screen. RMZ asked what the ID of the 1-inch well is. **New Action Item –** AECOM will provide the ID of the identified 1-inch temporary well.
- Discuss how possible clay smearing in boreholes used for grab groundwater samples will be mitigated to allow collection of sufficient volume for COC analysis. **Complete.** DR described the equipment used to collect the grab groundwater sample. KB noted there is a concern about smearing and that he has seen projects that use a 24-hour period prior to sample collection. RMZ stated the Army has to balance costs and described the following agreed to process:
    1. Review water levels from adjacent wells.
    2. Review lithology from acetate liner and from the nearest available boring logs.
    3. If there is potential for smearing, allow 3 to 4 hours for adequate breakthrough prior to sampling.
    4. If after 3 to 4 hours water is still not observed, evaluate whether the borehole should remain open for 24 hours before abandoning.

  RS noted that fieldwork will not be implemented under the current PBR due to RFP for new follow-on PBR contract being issued December 1.

Army

- Submit missing LHAAP-12 2012 RA-O Report with RTCs to EPA and TCEQ for concurrence. **Complete** – Missing 2012 RA-O report and RTCs were submitted to EPA and TCEQ on 9/29/16. EPA approval and TCEQ concurrence were received on 10/3/16 and 10/11/16, respectively. The final report and approval emails will be entered into the AR in the Q3 2016 update.

EPA

- Provide Certificate of Completion for LHAAP-67 to the Army. **Complete –** Army received EPA Certificate of Completion dated 9/14/16 from EPA.

TCEQ

- No outstanding action items.

AEC

- No outstanding action items.

USFWS

- No outstanding action items.

Schedule Review **RMZ**

- RMZ provided a preliminary draft schedule to attendees that was accepted by EPA. The preliminary draft schedule reflects a 10-month lag for follow-on PBR contract execution and subsequent mobilization time. The 10-month lag is considered the minimum down time.
- RS discussed the following anticipated schedule for the follow-on PBR contract:
    - RFP issued December 1, 2016.
    - Proposals due mid-January.
    - Award June 2017.
- The Army would like to finalize several documents before December 1, 2016 so that the documents will be available to contractors bidding on the follow-on PBR. The highest priorities for review are the LHAAP-18/24 FS, followed by the LHAAP-4 ROD. **Action Item** - EPA and TCEQ agreed to provide comments on the LHAAP-18/24 FS as soon as possible. EPA comments are also needed on the LHAAP-50 Year 2 RA-O report.
- The Army will cease monitoring at LHAAP-37; ORP is increasing at the site, indicating that the aquifer has not rebounded to its pre-test condition.
- MNA sampling will be suspended at LHAAP-46, LHAAP-50, LHAAP-58, and LHAAP-67 due to timing of the follow-on PBR. The follow-on PBR contractor will perform sampling at these sites going forward.

Programmatic Issues **RMZ/RM/AP**

- RMZ discussed Post-ROD Requirements relating to recently signed RODs and provided a handout with FFA, ROD, and CRP requirements.
    - The FFA states Remedial Action completion is supposed to be within 15 months from the ROD signature dates, but that schedule cannot be met.
    - ROD availability notices were sent out to senators, governor, state legislators, Mayor of Uncertain, county judge, USFWS, water board for Caddo Lake Water, etc.
    - Per the ROD, within 90 days initial notices of LUCs, contamination, and maps are to be sent to the same distribution list. December 10, 2016 is the 90-day deadline.

- AW developed fact sheets for each stating that the dispute concluded and the ROD was signed, a description of the RAOs and the selected remedies, including the LUCs along with a site map to be provided to the public during the RAB meeting.
- RMZ stated the Army is compliant with ROD, FFA and CRP requirements.

Defense Environmental Restoration Program (DERP) PBR Update **AECOM**

DR asked everyone to refer to the Document and Issue Tracker dated 10/20/16, which was distributed with the agenda. It includes currently projected dates for submittal of remaining project milestone deliverables to EPA, TCEQ, and the Army.

- Item 1 (GWTP Quarterly Report) – The Q4 2015 GWTP report is complete and responses to regulatory agency comments on it will be incorporated into the Q1 2016 GWTP report. Submittal to EPA and TCEQ is planned for November 2016.

- Item 2 (Revised Updated LHAAP-18/24 PSI Addendum) – TCEQ comments have been received, awaiting EPA comments. TCEQ noted there is no value in the log for 18CPTMW22 because it references lithology in a separate CPT log and shows incorrect well screen information. RMZ agreed that a new replacement log can be developed, but the original log needs to stay with the revised log for record-keeping purposes. **Action Item:** AECOM is to provide a new clean log for 18CPTMW22 to show the corrected screen interval; the original log will be attached and a note will be on the new clean log noting what correction was made. **Action Item:** Per AP request, AECOM will revise D-D' cross-section to add the 18CPTMW22 SW log to assist with understanding of lithology.

- Item 2-1 (LHAAP-18/24 Data Gap Sampling) is complete.

- Item 2-2 (Previous Regulatory Comments on LHAAP-18/24 FS) – As noted above, RMZ requested EPA prioritize review of the FS RTCs.

- Item 2-3 (LHAAP-18/24 Revised FS) – This document is a high Army priority, with the next action being to receive EPA or TCEQ comments or concurrence on the Draft Final Revised document submitted 10/13/16.

- Item 3-1 (LHAAP-37 RACR) – JS verified that paper copies of the Final RACR were shipped to EPA and TCEQ on 9/29/16. **Action Item:** RM is to verify that the electronic copy of the Final RACR was uploaded, or if the electronic copy needs to be resent. EPA comments or concurrence are requested by 10/31/16. **Action Item:** TCEQ is to provide an email response to close the loop.

- Item 4 (LHAAP-46 RACR) is complete.

- Item 5 (LHAAP-50 RACR) –The Final RACR will be entered into the AR.

- Item 6 (LHAAP-58 RACR) is complete.

- Item 7 (LHAAP-67 RACR) –The Army received the Certificate of Completion for LHAAP-67 from EPA on 9/15/2016. The Final RACR will be entered into the AR with the Q3 2016 update. PB inquired about a roll-off associated with IDW from LHAAP-67. MS indicated

the roll-off was sampled for IDW profiling. **Action Item:** AECOM will facilitate IDW disposal and removal of the roll-off.

- Item 8 (LHAAP-12 2015 Annual Report) – The Draft Final 2015 Annual Report received EPA and TCEQ approval on 7/18/16 and 7/19/16, respectively, and became final on 7/19/16. The Draft Final 2012 RA-O report was missing from the Administrative Record. The report was submitted to the EPA and TCEQ for review and concurrence on 9/29/2016. Approval was received from EPA and TCEQ on 10/3/2016 and 10/11/2016, respectively. The Final LHAAP-12 2012 and 2015 Annual Reports will be entered into the AR with the Q3 2016 update.

- Item 9 (LHAAP-46 Yr. 2 RA-O Report) – Yr. 2 RA-O report became final on 6/2/16. It will be entered into the AR (with the regulatory approval letters) with the Q2 2016 AR update. August sampling is complete and validated data are forthcoming.

- Item 10-1 (LHAAP-67 Yr. 1 RA-O Report) – DR said the report is planned for submittal to EPA and TCEQ the week of 10/24/2016.

- Item 10-2 (LHAAP-67 Yr. 2 RA-O Report) – Same as Item 10-1.

- Item 11-1 (LHAAP-50 Yr. 1 RA-O) – EPA comments were received on the Draft Year 1 report on 9/30/2016, and TCEQ comments were received on 10/10/2016. DR said that responses to TCEQ and EPA comments on the Year 1 report are being developed.

- Item 11-2 (LHAAP-50 Yr. 2 RA-O) – TCEQ comments on the Draft Yr. 2 report were received on 10/11/2016. RM stated EPA would provide comments today (10/ 20/16).

- Item 12-1 (LHAAP-58 RA-O) – The Yr. 1 RA-O report became final on 12/4/15 and the Yr. 2 RA-O report became final on 6/2/16. The Yr. 2 report and the regulatory approval letters will be entered into the AR with the Q2 2016 AR Update.

- Item 12-2 (LHAAP-58 Contingency Remedial Action Work Plan) – The Draft Contingency RAWP for LHAAP-58 was approved by EPA on 7/13/16 and by TCEQ on 7/26/16. The Final LHAAP-58 Contingency RAWP will be entered into the AR with the Q3 2016 AR update. The implementation of the contingency plan remedy is being deferred to the next PBR contract.

- Item 12-3 (LHAAP-58 ESD) – AW said RTCs are on his list to complete, but this is no longer a time-critical item, because the LHAAP-58 contingency remedial action will not be implemented until the next PBR contract is awarded.

- Item 13 (MMM) – The Draft August 2016 MMM minutes became final upon concurrence from EPA and TCEQ, which was received on 9/19/16. Draft September 2016 MMM minutes were submitted to EPA and TCEQ on 9/26/16 and finalized on 10/13/2016. The next MMM meeting will be held at 10:00 CST on Tuesday 11/17/16 via teleconference.

- Item 14-1 (LHAAP-29 RI Addendum) – The Draft Final LHAAP-29 RI Addendum received approval from EPA and TCEQ and the RI Addendum became Final on 8/29/16. However,

upon approval, EPA provided an additional comment stating the source of the methylene chloride is unknown. Meeting attendees discussed the comment, with the following points being made:

- RMZ provided two drawings, a 1942/1945 as-built showing numerous subsurface utility lines in the area and a 1992 topo map showing conditions during the original RI/FS. RMZ explained that based on review of the drawings, it was plausible that the DNAPL could have traveled from the source area ("soak out area" area near Building 801F) to the vicinity of the DNAPL plume over the ground surface if the ground was wet.
- KB stated he thought the vadose zone was clayey at the "soak out" area and sandy near the 29WW16 location.
- RMZ stated that methylene chloride was seldom detected in soil because it is highly volatile.
- KB asked why methylene chloride distribution is different at LHAAP-18/24 (i.e., methylene chloride found within the vadose zone) compared to LHAAP-29.
- AP believes the investigation was thorough and made considerable effort to look for possible source areas in likely locations.
- **Action Item**: KB will discuss with RM and will review the comment and original document. EPA will potentially revise the comment to identify specific language in the RI Addendum that could be modified to close out the comment.
- RMZ stated that although the transport mechanism remains unknown, the historical source area and DNAPL area are well documented.

- Item 14-2 (LHAAP-29 FS Addendum) – DR said work has continued on the FS Addendum and the expected date for submittal of the Draft FS Addendum to the regulators is still TBD.

- Item 15-1 (LHAAP-47 PSI Work Plan) – TCEQ provided concurrence with the Draft PSI Work Plan without additional comments on 8/11/16. EPA approved the Draft Final PSI Work Plan on 10/13/2016. AECOM will enter the Final PSI Work Plan into the Q3 2016 AR Update.

- Item 15-2 (LHAAP-16 RD/RDWP) – The Draft RD was submitted to EPA and TCEQ on 10/12/2016. EPA and TCEQ are to provide comments on the Draft RD by 11/14/2016 so that the Draft Final RD can be submitted and approved prior to 12/1/2016.

- Item 15-2a (LHAAP-16 RD Post ROD Requirements) – The Army is to provide the draft notice of contamination and LUCs to TCEQ and EPA for review prior to issuing the notice to Federal/State/Local entities and owner/occupants. The Army is to submit the draft notice by 11/12/16. AP requested that Army contacts be included on the notice, not TCEQ contacts. AP commented that the notices should clearly state the site is an ongoing action and is not a new site. AP noted that phrasing such as "initial notice" could be misleading. RS suggested the notice could identify the date work started.

- Items 15-3 (LHAAP-17 RD/RAWP) – The Army is deferring this item to the next PBR contract.

- Item 15-3a (LHAAP-17 PDI WP) – The Draft PDI Work Plan was submitted to EPA and TCEQ on 9/29/16. TCEQ comments were received on 10/12/2016. EPA is to provide

comments on the Draft PDI Work Plan by 10/31/2016 so the Draft Final PDI Work Plan can be submitted and approved prior to 12/1/2016.

- Item 15-3b (LHAAP-17 Post-ROD Requirements) – Similarly to LHAAP-16, the Army will be providing notice of contamination and LUCs to Federal/State/Local officials and owner/occupants.

- Item 15-4 (LHAAP-001-R-01 RD/RDWP) – The Draft LUC RD will be developed by the follow-on PBR contractor.

- Item 15-4a (LHAAP-001-R-01 Limited LTM) – Monitoring wells were re-developed on 9/23/16. EPA and TCEQ were notified of the sampling planned for September 28/29, 2016. AP and RM responded that the TCEQ and EPA would not be observing or collecting split samples. DR stated groundwater samples were collected 9/29/2016. Data will be validated prior to 12/1/2016. Three sampling rounds are required for LHAAP-001-R and a single round for LHAAP-003-R if the results are below the perchlorate PCL.

- Item 15-4b (LHAAP-001-R-01 Post-ROD Requirements) – Similarly to LHAAP-16, the Army will be providing notice of contamination and LUCs to Federal/State/Local officials and owner/occupants.

- Item 15-5 (LHAAP-003-R-01 RD/RDWP) – The Draft LUC RD will be developed by the follow-on PBR contractor.

- Item 15-5a (LHAAP-003-R-01 Limited LTM) – DR stated the only required round of annual groundwater samples were collected 9/29/2016. All wells except 18WW16, which gets sampled during LHAAP-18/24 monitoring events, were redeveloped prior to sampling. Data will be validated prior to 12/1/2016.

- Item 15-5b (LHAAP-003-R-01 Post-ROD Requirements) – Similarly to LHAAP-16, the Army will be providing notice of contamination and LUCs to Federal/State/Local officials and owner/occupants.

- Item 15-6 (LHAAP-04 ROD) – The Army submitted the Draft Final ROD to EPA and TCEQ on 10/7/2016. RMZ provided responses to TCEQ comments during the meeting. AP explained that TCEQ comments were based on comparison of the LHAAP-17 ROD to the LHAAP-04 ROD to verify the dispute language was the same. After discussion, AP and RMZ agreed on changes to be made to the ROD. **Action Item:** RMZ will incorporate the changes to the LHAAP-04 ROD based on TCEQ revisions and resend the document to EPA for review. **Action Item:** AECOM will update the figure in the LHAAP-04 ROD notice to add the LUC boundary, which was developed and agreed to by meeting participants.

- Item 15-7 (Site-wide LUC Management Plan) – The Army submitted the FY2016 Revision Log to EPA and TCEQ for electronic signature on 10/17/2016. Three copies were provided to KB so that EPA can sign and return copies to Army and to TCEQ.

- Item 16 (RAB/Website) – DR said the next RAB meeting will be tonight, October 20th from 6:00-7:30 pm at the Karnack Community Center. Submitted draft July 2016 RAB meeting

minutes to EPA and TCEQ on 8/23/16. Concurrence on the draft July RAB minutes was received and the draft minutes were distributed to RAB members on 8/30/16.

- Item 17-1 (GWTP O&M – GWTP Sampling and Optimization Memo) and Item 17-2 (GWTP Sampling and Analysis Plan) – **Action Item:** AECOM to provide a clean version of the GWTP Sampling and Analysis Plan that incorporates all approved revisions to the Army for review prior to submittal to agencies. The GWTP Sampling and Analysis Plan will be finalized prior to 12/1/2016.

- Item 17-3 (GWTP Continuing O&M) – GWTP O&M continues.

- Item 18 (Admin. Record Update) – The Q2 2016 AR update was uploaded to the LHAAP website on 10/13/2016, and CDs will be provided the week of 10/17/2016. The 2016 AR Q3 update is being compiled.

- Item 19 (LHAAP-02) – The third round of semi-annual sampling was performed the week of 10/3/16. The Army directed AECOM to prepare a Tech Memo covering the first year (two rounds) of semi-annual sampling (10/15/15 and 4/29/16), which will be provided to TCEQ and EPA. The 10/3/16 results will be provided in a validated data package only (no annual tech memo/report) for Year 2.

- Item 20 (LHAAP-37 Geochemical Rebound) –The first round of sampling was completed in August 2016. Additional sampling is suspended because the site has not adequately rebounded; future sampling will be conducted by the follow-on PBR contractor.

- Item 21 (Smart Map) – AECOM continues to develop the Smart Map.

- **Upcoming/ongoing Field Work**
  - October 2016 semi-annual groundwater sampling at LHAAP-2 and LHAAP-58 (just completed).
  - LHAAP-47 PSI implementation – Field work is being deferred to the follow-on PBR contract.
  - November – Perimeter Wells/Surface Water sampling will be performed in November 2016. Quarterly groundwater sampling at LHAAP-37 will not be performed (see Item 20 above). MNA groundwater sampling at LHAAP-50 and LHAAP-67 will also not be conducted.

- **Monthly Data** – September 2016 Validated LHAAP Data were provided to meeting attendees.

MMRP Update **Army**

RMZ requested that AECOM provide a technical memorandum documenting LUC maintenance performed (e.g., mowing and sign inspections with photos). **Action Item:** DR agreed that AECOM would provide the requested technical memorandum.

Other Environmental Restoration – Not discussed. **Army**

Schedule

- RMZ provided a preliminary LHAAP draft schedule to TCEQ and EPA. RMZ stated that the schedule does not include RA-O sites; only pre-RIP sites were identified. **Action Item:** RM stated that he would like to verify if RA-O sites are needed in the schedule before responding to RMZ.
- RS noted that the schedule is subject to change resulting from Federal Acquisition Regulation (FAR) requirements relating to procurement of the new contract.

USFWS Update **RMZ/PB**

- Update – No update.

Schedule Next Managers' Meeting – The November 2016 MMM will be a teleconference on 11/17/2016 at 10:00 A.M.

Adjourn

Attachments:

- FFA, ROD, and CRP requirements table
- LHAAP Preliminary Draft Schedule
- September 2016 Validated LHAAP Data:
    - GWTP Effluent, Weekly: Bi-weekly, and Monthly (August 2016)
    - GWTP Influent: Monthly (August 2016)
    - LHAAP-37 Quarterly MNA Sampling (August 2016)
    - LHAAP-46 Semi-annual MNA Sampling (August 2016)
    - LHAAP-50 Surface Water Sampling (August 2016)
    - Surface Water Sampling (August 2016)
- LHAAP-35B(37) Aquifer Rebound – February 2012 through August 2016
- LHAAP-29 RI Addendum figures for discussion

ACRONYM LIST

LHAAP Data Validated
September 2016

GWTP Effluent *Weekly, Bi-weekly, Monthly, and Quarterly Sampling - August 2016*

- Ammonia (350.1)
- Ortho-Phosphate (365.2)
- Total Organic Carbon (415.1)
- Perchlorate (6850)
- 1,4-Dioxane (8270D-SIM)
- Sulfide (SM4500-S-(-2)-F-2000)
- Metals (6010C)
- Metals (6020A)
- Hexavalent Chromium (7196A)
- VOC (8260B)
- Anions (9056)

GWTP Influent *Monthly - August 2016*

- Perchlorate (6850)
- VOC (8260B)

LHAAP-37 *Aquifer Rebound Evaluation Sampling - August 2016*

- Total Organic Carbon (415.1)
- VOC (8260B)
- Inorganic Anions (9056)
- Dissolved Gases (RSK-175)
- Dechlorinating Bacteria (CENSUS)
- Ferrous Iron (SM3500FE)
- Sulfide (SM4500-S-(-2)-F-2000)

LHAAP-46 *Semi-Annual MNA Sampling - August 2016*

- Alkalinity (310.2)
- Phosphorus (365.4)
- Total Organic Carbon (415.1)
- Metals (6010C)
- Metals (6020A)
- VOC (8260B)
- Inorganic Anions (9056)
- Dissolved Gases (RSK-175)
- Sulfide (SM4500-S-(-2)-F-2000)

LHAAP-50 *Surface Water Sampling - August 2016*

- Perchlorate (6850)
- VOC (8260B)

Surface Water *Surface Water Sampling - August 2016*

- Perchlorate (6850)

GWTP Effluent Weekly Sampling - August 2016

Location ID: / Sample Date:	Units	Daily Maximum Conc	LH18/24-SP650-6382-GRAB 8/1/2016	LH18/24-SP650-6384-GRAB 8/8/2016	LH18/24-SP650-6387-GRAB 8/15/2016	LH18/24-SP650-6389-GRAB 8/22/2016	LH18/24-SP650-6390-GRAB 8/29/2016
Location Description:			GWTP–Collected from a spigot on the discharge of effluent TK-650. Sampled Weekly.				
Ammonia as N (350.1)							
AMMONIA AS N	mg/L		6.74	0.26	NA	NA	7.17
Ortho-Phosphate (365.2)

Blue Highlighting Indicates concentrations above the MCL/PCL

Some samples may have been diluted due to the concentration(s) of one or more analytes exceeding the upper limit of the calibration curve.

CEQ/mL - cells equivalent per milliliter

J - Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.

MCL - Maximum Contaminant Limit

mg/L - milligrams per liter

NA - not analyzed

PCL – Texas Risk Reduction Program (TRRP) Tier 1 Groundwater Residential Protective Concentration Level

U - Undetected: The analyte was analyzed for, but not detected.

ug/L - micrograms per liter

Blue Highlighting Indicates concentrations above the MCL/PCL

Some samples may have been diluted due to the concentration(s) of one or more analytes exceeding the upper limit of the calibration curve.

CEQ/mL - cells equivalent per milliliter

J - Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.

MCL - Maximum Contaminant Limit

mg/L - milligrams per liter

NA - not analyzed

PCL – Texas Risk Reduction Program (TRRP) Tier 1 Groundwater Residential Protective Concentration Level

U - Undetected: The analyte was analyzed for, but not detected.

ug/L - micrograms per liter

LHAAP-46 Semi-Annual Sampling - August 2016

Blue Highlighting Indicates concentrations above the MCL/PCL

Some samples may have been diluted due to the concentration(s) of one or more analytes exceeding the upper limit of the calibration curve. Metals results for "FF" samples are dissolved.

J - Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.

MCL - Maximum Contaminant Limit

mg/L - milligrams per liter

NA - not analyzed

PCL – Texas Risk Reduction Program (TRRP) Tier 1 Groundwater Residential Protective Concentration Level

U - Undetected: The analyte was analyzed for, but not detected.

UJ - The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

ug/L - micrograms per liter

AECOM

Subject:	**Final Minutes, Quarterly Restoration Advisory Board (RAB) Meeting, Longhorn Army Ammunition Plant (LHAAP)**
Location of Meeting:	**Karnack Community Center, Karnack, Texas**
Date of Meeting:	**January 19, 2017; 6:00 – 7:00 PM**

Meeting Participants:

LHAAP/BRAC:	Rose M. Zeiler
USACE:	Aaron Williams
USAEC:	Nicholas Smith; Randy Cerar
AECOM:	Debra Richmann, Elspeth Sharp, Craig Holloway; JoLynn Snow
USEPA Region 6:	Rich Mayer; Dorelle Harrison
TCEQ:	April Palmie
RAB:	**Present:** Paul Fortune, Carol Fortune, Richard LeTourneau, Nigel Shivers, Judy VanDeventer, Tom Walker, Terry Britt **Absent:** Charles Dixon, John Pollard, Jr.
Public:	Dan Murphy, Rick Lowerre, Marwan Salameh, Laurie Rodriguez, Robert Speight

An agenda for the RAB meeting, three handouts (Groundwater Treatment Plant [GWTP] – Processed Groundwater Volumes, Harrison Bayou and Goose Prairie Creek – Perchlorate Data, and LHAAP Perimeter Well Monitoring – Perchlorate Data), and a color copy of the AECOM slide presentation were provided for meeting attendees. In addition, RAB application forms were available at the sign-in table.

Welcome and Introduction

Mr. Paul Fortune, RAB Co-Chair, called the meeting to order. Mr. Fortune asked for introductions of new attendees. Mr. Randy Cerar with USAEC, Mr. Dorelle Harrison with USEPA, and Ms. JoLynn Snow and Mr. Craig Holloway with AECOM were introduced to the RAB.

Open Items - Dr. Rose M. Zeiler

RAB Administrative Issues

Dr. Zeiler opened the discussion of RAB Administrative Issues with the minutes from the last (October 2016) RAB meeting.

Minutes

Ms.Richmann said that the draft October 2016 RAB meeting minutes were sent to RAB members along with the January meeting agenda on 1/9/17. Dr. Zeiler asked the RAB members if anyone wanted to make a motion to approve the minutes from the October 2016 RAB meeting. Ms. Judy VanDeventer made a motion to accept the draft October 2016 minutes as written and Mr. Terry Britt seconded the motion. The approved October 2016 RAB minutes will be posted on the LHAAP website.

Website Update

Ms. Richmann said that the website has been updated since the last RAB meeting to include the agenda for the current RAB, the approved meeting minutes from the July 2016 meeting, and additional sampling activities performed through December. The Administrative Record link has also been updated to include documents added to the Administrative Record through the third quarter of 2016.

Postpone Next RAB Meeting Until October 2017

Dr. Zeiler asked if the RAB members might want to postpone the next RAB meeting until the new PBR contract has been awarded. Between now and then, relatively few activities will be occurring, so the meeting topics would be limited, primarily to GWTP operations. Ms. VanDeventer said she doesn't want to suspend the meetings and Mr. Terry Britt suggested instead, the members might be interested in a guided tour of the sites to better understand the changes that have taken place. There was general consensus among the group that the site tour should be conducted in lieu of the April RAB meeting. It was agreed that the participants would assemble at the Karnack Community Center at 5:00 PM on Thursday, April 27th to go over the agenda, then leave from there for the site tour. Dr. Zeiler encouraged people planning to attend to identify sites and topics of interest. Guests of RAB members and members of the public are welcome to attend, but the Army needs to know in advance, so she asked that this information be provided to Mr. Fortune. She also indicated more information on the tour will be forthcoming.

Miscellaneous

Mr. Fortune asked about the schedule for the RFP for the next PBR contract and whether the bidding process had started yet. AW said what he can share with the RAB is that the next PBR contract will be awarded prior to the end of period of performance for the current PBR contract, which ends September 30, 2017.

Site-wide Environmental Restoration Issues – Dr. Zeiler and Ms. Richmann

Dispute-Impacted Sites Update

Ms. Richmann quickly reviewed the dispute-impacted sites listed in slide 9 and shown on the LHAAP sites map on slide 10 of the presentation. Dr. Zeiler told the audience that the Army is now working on post-ROD documents for the formerly disputed sites with signed RODs

(LHAAP-16, LHAAP-17, LHAAP-001-R, and LHAAP-03-R). Ms. Richmann summarized the post-ROD activities that are ongoing or completed at these sites (slide 11).

Post-ROD Activities at LHAAP-16, LHAAP-17, LHAAP-001-R, and LHAAP-003-R

Ms. Richmann said that at LHAAP-16, the Remedial Design has been reviewed by EPA and TCEQ, and will be finalized under the current contract. At LHAAP-17, the final post-ROD activity under the current contract is the Final Pre-Design Investigation Work Plan, which is complete. At the two MMRP sites, LHAAP-001-R and -003-R, respectively, limited groundwater monitoring, consisting of three rounds of sampling, and a single round of sampling for perchlorate is required by the ROD. One round of samples was collected from both sites on September 28-29 and analyzed for perchlorate. Slides 12-15 show the monitoring well locations that were sampled and the perchlorate results for each site. Perchlorate concentrations in all but one of the six samples from LHAAP-001-R are below the detection limit, and the only detected concentration is below the TRRP Tier 1 Groundwater Residential PCL (slide 13). Similarly, perchlorate concentrations in two of the three samples from LHAAP-003-R are below the detection limit and the third concentration is below the PCL. A tech memo documenting the results from LHAAP-003-R is in preparation and will be the last deliverable for this site under the current contract.

Slide 16 identifies the post-ROD deliverables for each site that will be included in the new PBR contract. Dr. Zeiler clarified that these are the first actions for the new contractor. Ms. Richmann said that the current AECOM PBR contract ends September 30, 2017, and reviewed the remaining deliverables and activities AECOM will complete or perform for the duration (slides 17 and 18).

Defense Environmental Restoration Program (DERP) Update – AECOM (Debra Richmann)

MNA Site Updates (LHAAP-37, 46, 50, 58, 67)

Ms. Richmann provided an overview of the current status of the MNA sites at LHAAP (Slide 19). Mr. Fortune asked which site is the one where sampling was suspended until the conditions returned to normal. Dr. Zeiler said it is LHAAP-37 (aka 35(B)) where the bio-plug study was performed, and she summarized the study and results. The study did not produce the expected results (accelerate biological degradation of COCs) and was terminated.

Ms. Richmann continued going through the update slides for the other DERP sites:

- LHAAP-04 – The final ROD has been signed by the Army and paper copies of both the ROD and approval/concurrence letters have been sent to EPA and TCEQ for signature.
- LHAAP-29 – The Final RI Addendum is complete. The FS Addendum, which includes a new remedial alternative not evaluated in the FS, has been drafted and provided to the Army.
- LHAAP-18/24 – A Draft Final Revised FS is in preparation, based on responses to EPA and TCEQ comments on the Draft FS. The Revised FS incorporates recent data obtained between February and June 2016, and includes the complete Final Supplemental to the

Updated Post-Screening Investigation Report as an appendix. A contingency remedy for 1,4-dioxane has also been added. Dr. Zeiler said she appreciated the hard work put in by Mr. Mayer, Ms. Palmie, and AECOM to be able to finalize it under the current PBR contract.

- LHAAP-47 – The Final Post-Screening Investigation Work Plan was approved by EPA and TCEQ in September. The work plan will be implemented under the next PBR contract.
- Groundwater Treatment Plant (GWTP) – Mr. Holloway reviewed slide 25, with the updated monthly treated groundwater volumes through September 2016. In September, the volume was almost 806,000 gallons. Next Mr. Holloway went on to describe the incident that occurred at the plant sometime over the weekend of December 10-11, 2016 that resulted in release of approximately 1,200 gallons of hydrochloric acid (HCl). All of the HCl was released within the secondary containment of the acid storage tank, so no acid was released to the environment. The release occurred when the flange bolts on the tank failed. The acid flowed from the tank into a sump, from which it was pumped into the equalization tank, resulting in irreparable damage to the sump pump and acidification of the contents of the equalization tank. The acid solution was pumped through the pre-treatment system, resulting in additional damage to the manway hatch on the ORP tank. The ICTs and extraction wells had to be shut down, because no water met the discharge criteria for perchlorate and the equalization tank was full.

  Repairs/replacements have been made for the damaged equipment, and chemicals to neutralize the solution in the ORP tank have been added. However, the pH remains too low and the ORP remains too high for effective removal of perchlorate by the fluidized bed reactor (FBR). So, wastewater continues to be cycled through the pre-treatment system and no water has been discharged to Harrison Bayou or through irrigation.

  Mr. Fortune asked about the overall operation of the GWTP, given its age. Dr. Zeiler responded that two of the three units are very effective for removal of metals and VOCs. It is the third unit, the FBR that has been the challenge and it is for removal of perchlorate. She said that frac tanks are scheduled to be delivered and set up outside the GWTP tomorrow to provide some extra capacity and allow some fresh groundwater to be processed through the FBR.

  Mr. LeTourneau asked about possibly injecting the acidic water into a well and said chemical companies do this. Mr. Holloway said that he is working on a solution to handle the water on site.

  In light of the incident at the GWTP, Mr. VanDeventer said she definitely wants to have a meeting of the RAB members in April to get an update on the situation.

Surface Water and Perimeter Well Sampling Update

Ms. Richmann showed the slides with the surface water and perimeter well sampling locations (slides 26 and 28, respectively). Surface water samples were collected from locations GPW-1 and GPW-3 on Goose Prairie Creek, and HBW-1, HBW-7, and HBW-10 on Harrison Bayou in

November 2016. All perchlorate concentrations are below the TRRP Tier 1 groundwater residential PCL of 17 µg/L. Two samples had estimated perchlorate concentrations below 1 µg/L, one sample had a detected concentration of 0.563 µg/L, and perchlorate was not detected in the other two samples. The Harrison Bayou and Goose Prairie Creek handout includes the November 2016 sample results.

Groundwater samples were collected from five of the six perimeter wells in November or December 2016. All perchlorate concentrations are below the TRRP Tier 1 groundwater residential PCL of 17 µg/L. Perchlorate was not detected in three of the wells - 110, 111, and 112; and samples from wells 133 and 134 both had perchlorate concentrations below 1 µg/L. Well 108 was not sampled. The Perimeter Well Monitoring handout includes the November/December 2016 sample results.

Next RAB Meeting Schedule and Closing Remarks

As discussed on page 2 of these minutes, a LHAAP site tour will be held in lieu of a regular RAB meeting on **April 27, 2017**. Interested RAB members and their guests should assemble at the **Karnack Community Center at 5:00 p.m.**

RAB members Mr. LeTourneau, Mr. Britt, and Ms. VanDeventer requested that the RAB be notified of what firm is awarded the new PBR contract at the time it is awarded or when the new contractor is given notice to proceed. Dr. Zeiler said she will make sure the RAB receives notification. Mr. George Rice asked if the RFP for the next contract has been published yet; Mr. Williams responded that it has not been published and that he does not have information on when it will be.

Adjourn

Motion to adjourn was made by Ms. Fortune and seconded by Ms. VanDeventer.

October 2016 Meeting Handouts:

- Meeting Agenda
- PowerPoint Presentation Slides
- Groundwater Treatment Plant [GWTP] – Processed Groundwater Volumes Handout
- Harrison Bayou and Goose Prairie Creek – Perchlorate Data Handout
- LHAAP Perimeter Well Monitoring – Perchlorate Data Handout

- Website Update
- Postpone next RAB meeting until October 2017

Ongoing Outreach - Notifications for October RAB Meeting

- Published RAB meeting announcement in Marshall News Messenger on January 9th
- Requested the following radio stations to air January RAB Meeting Public Service Announcement (PSA):
  - KMHT Radio 103.9 (Karnack)
  - 98 Rocks (Alpha Media, Shreveport) and
  - Kiss Country 93.7 (Town Square Media, Shreveport)
- Requested PSA to be placed on KTBS Channel 3 and KTAL Channel 6 TV Community/Local Events Calendar
- Sent RAB announcement/agenda by email or USPS to individual RAB members and other interested parties
- Mailed RAB announcement to churches in Karnack on January 9th
- Posted RAB Meeting Fliers at multiple locations in the community:
  - Shady Glade Café, Caddo Grocery, Fyffes Corner Store, Circle S Grocery, Run In Grocery, Family Dollar Store, Convenience Store at FM9 and FM199

The Army Wants You to be Informed!

- The Army is committed to protecting human health and the environment; key to that commitment is engaging the community and increasing public participation in environmental restoration at LHAAP.
- You are encouraged to:
  - Attend RAB meetings and/or become a member of the RAB
  - Visit the Longhorn environmental website at www.longhornaap.com
  - Make suggestions for improving communication – the Army welcomes and appreciates community feedback

Minutes from Past RAB Meetings

- Discussion of October 2016 RAB Meeting Minutes/Motion to accept

Website Update

Postponed Next RAB Meeting

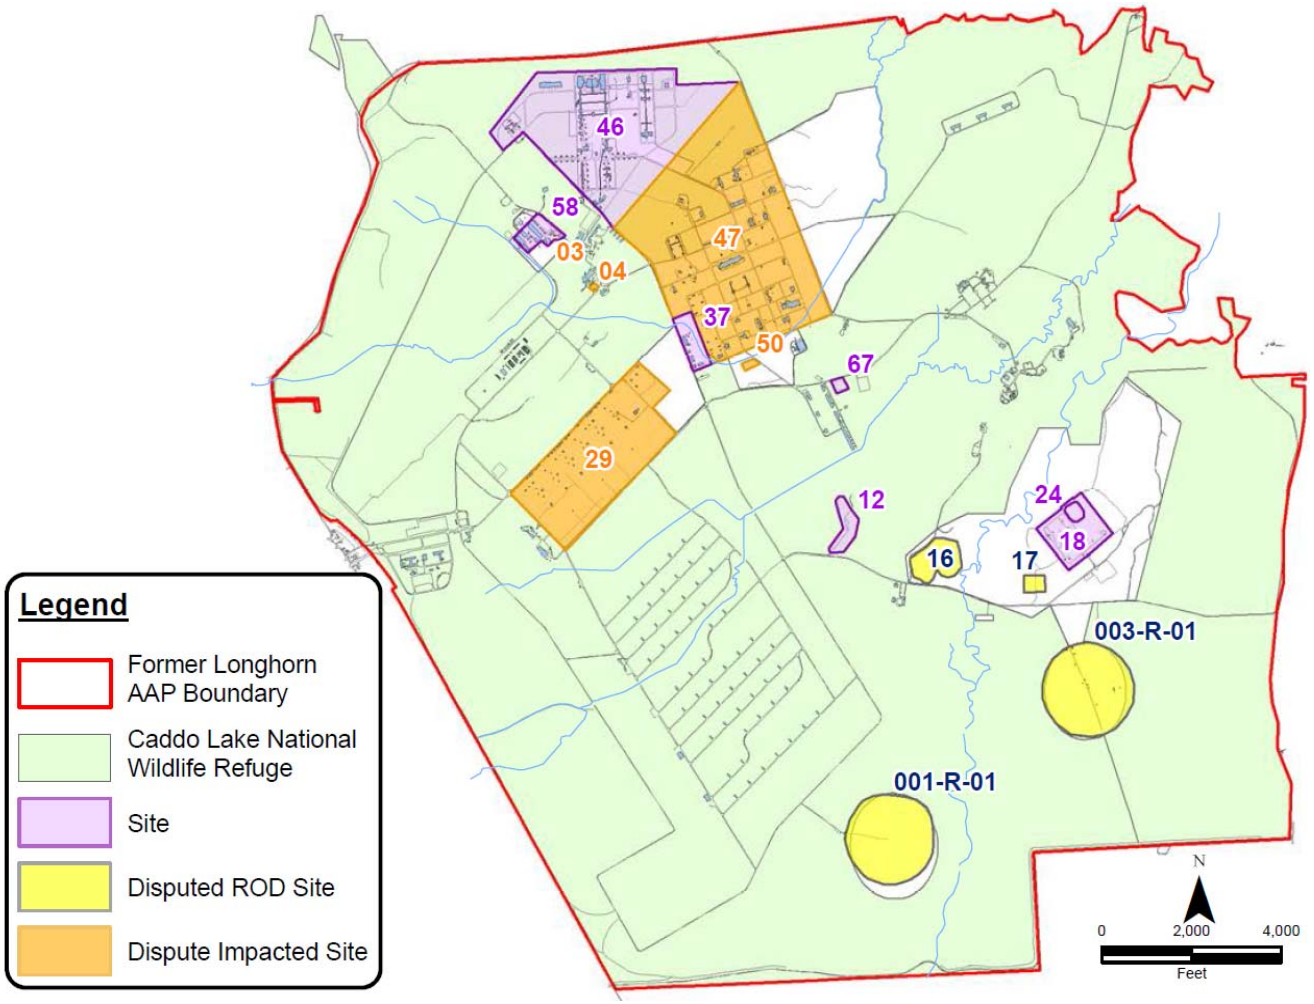
- Remaining effort on the current PBR contract through the end of the Period of Performance (September 30, 2017) will be mainly continuing GWTP Operations and Maintenance.
- Do the RAB members, therefore, wish to postpone the next RAB meeting until October 2017, when the new PBR contract will be in place?

Site-wide Environmental Restoration Issues

Active LHAAP Performance-Based Remediation Sites (* Disputed ROD Site)

LHAAP-03	Building 722 Paint Shop
LHAAP-04	Pilot Wastewater Treatment Plant
LHAAP-12	Landfill 12
LHAAP-16	Landfill 16*
LHAAP-17	Burning Ground No.2/Flashing Area*
LHAAP-18	Burning Ground No.3
LHAAP-24	Unlined Evaporation Pond
LHAAP-29	Former TNT Production Area
LHAAP-37	Chemical Laboratory Waste Pad
LHAAP-46	Plant Area 2
LHAAP-47	Plant Area 3
LHAAP-50	Former Sump Water Tank
LHAAP-58	Maintenance Complex
LHAAP-67	Aboveground Storage Tank Farm
LHAAP-001-R	South Test Area/Bomb Test Area*
LHAAP-003-R	Ground Signal Test Area*

Longhorn Performance-Based Remediation Sites Map

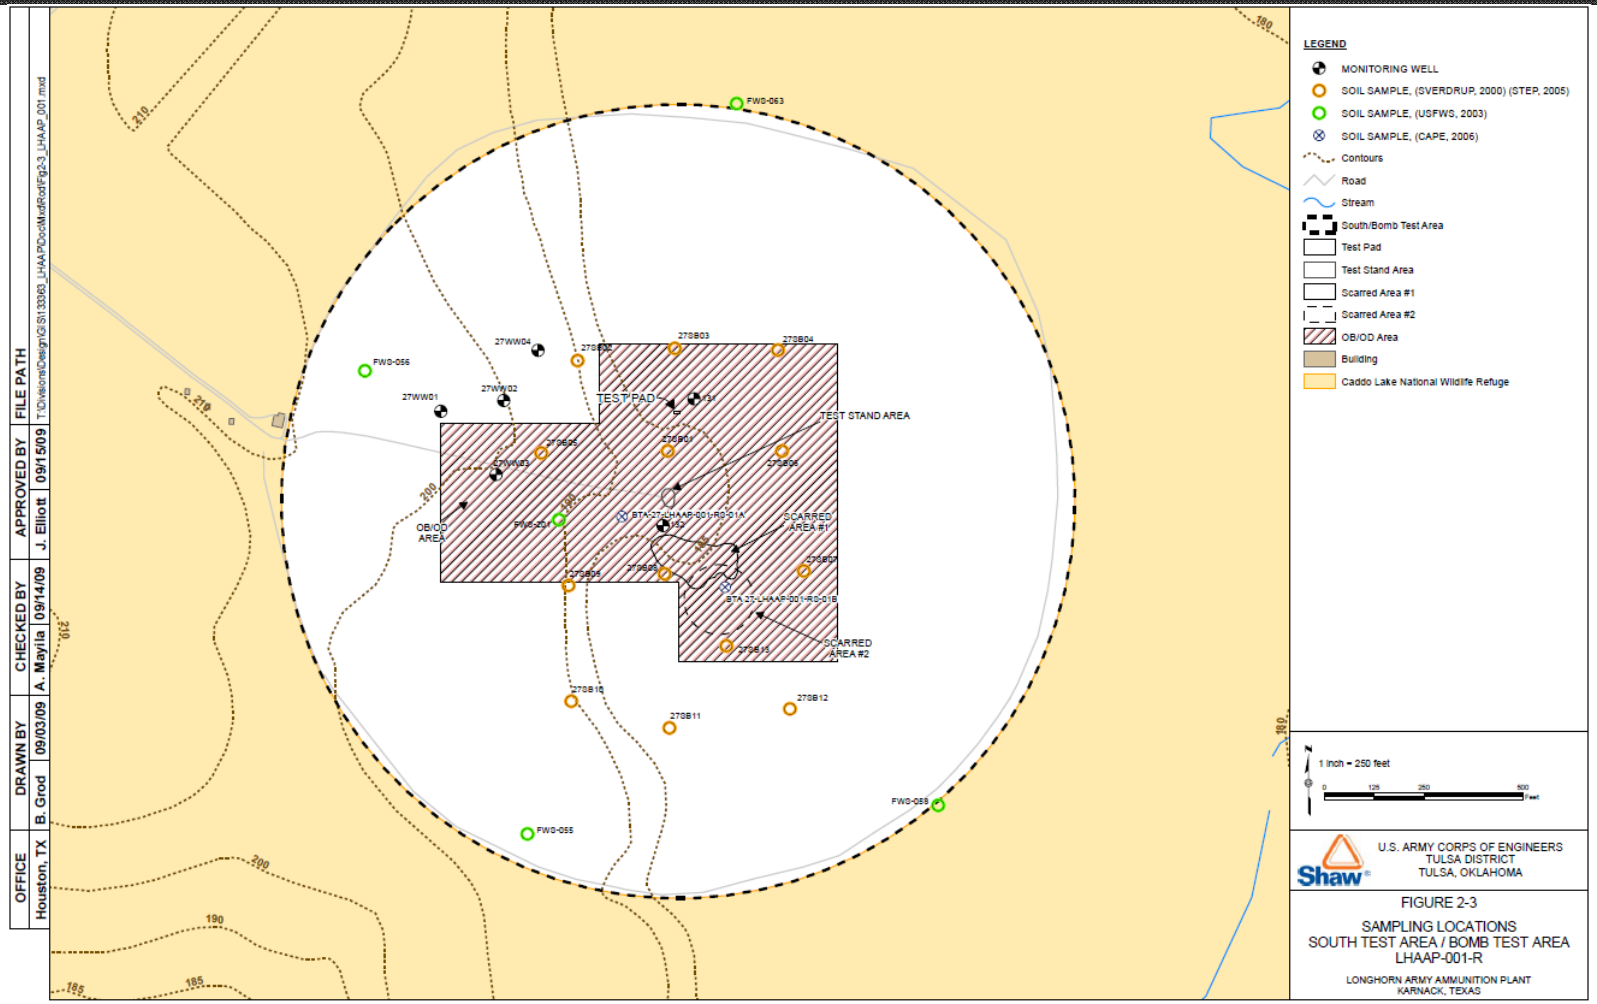


AECOM

Post-ROD Activities at Disputed Sites LHAAP-16, -17, -001-R, and 003-R

- Activity for LHAAP-16
  - In the process of resolving regulatory comment for the Remedial Design, upon which the Remedial Design will be finalized
- Activity for LHAAP-17
  - Completed Pre-Design Investigation Work Plan
- Activities for Military Munitions Response sites LHAAP-001-R and LHAAP-003-R
  - Post-ROD requirements for LHAAP-001-R and LHAAP-003-R include limited groundwater monitoring for perchlorate to confirm levels are below the Texas Risk Reduction Program Tier 1 Groundwater Residential Protective Concentration Level (PCL)
  - Three rounds of sampling from six wells at LHAAP-001-R, and one round of sampling from three wells at LHAAP-003-R are required
  - Sampling at LHAAP-001-R and LHAAP-003-R was performed on 9/28/16 and 9/29/16, respectively

Post-ROD Limited Groundwater Monitoring Locations at LHAAP-001-R



LHAAP-001-R, South Test Area/Bomb Test Area

SELECTED REMEDY: Land Use Controls and Limited Groundwater Monitoring

First Post-ROD Round Limited Groundwater Monitoring Results for LHAAP-001-R

LHAAP-001-R Groundwater Sampling Results - September 2016

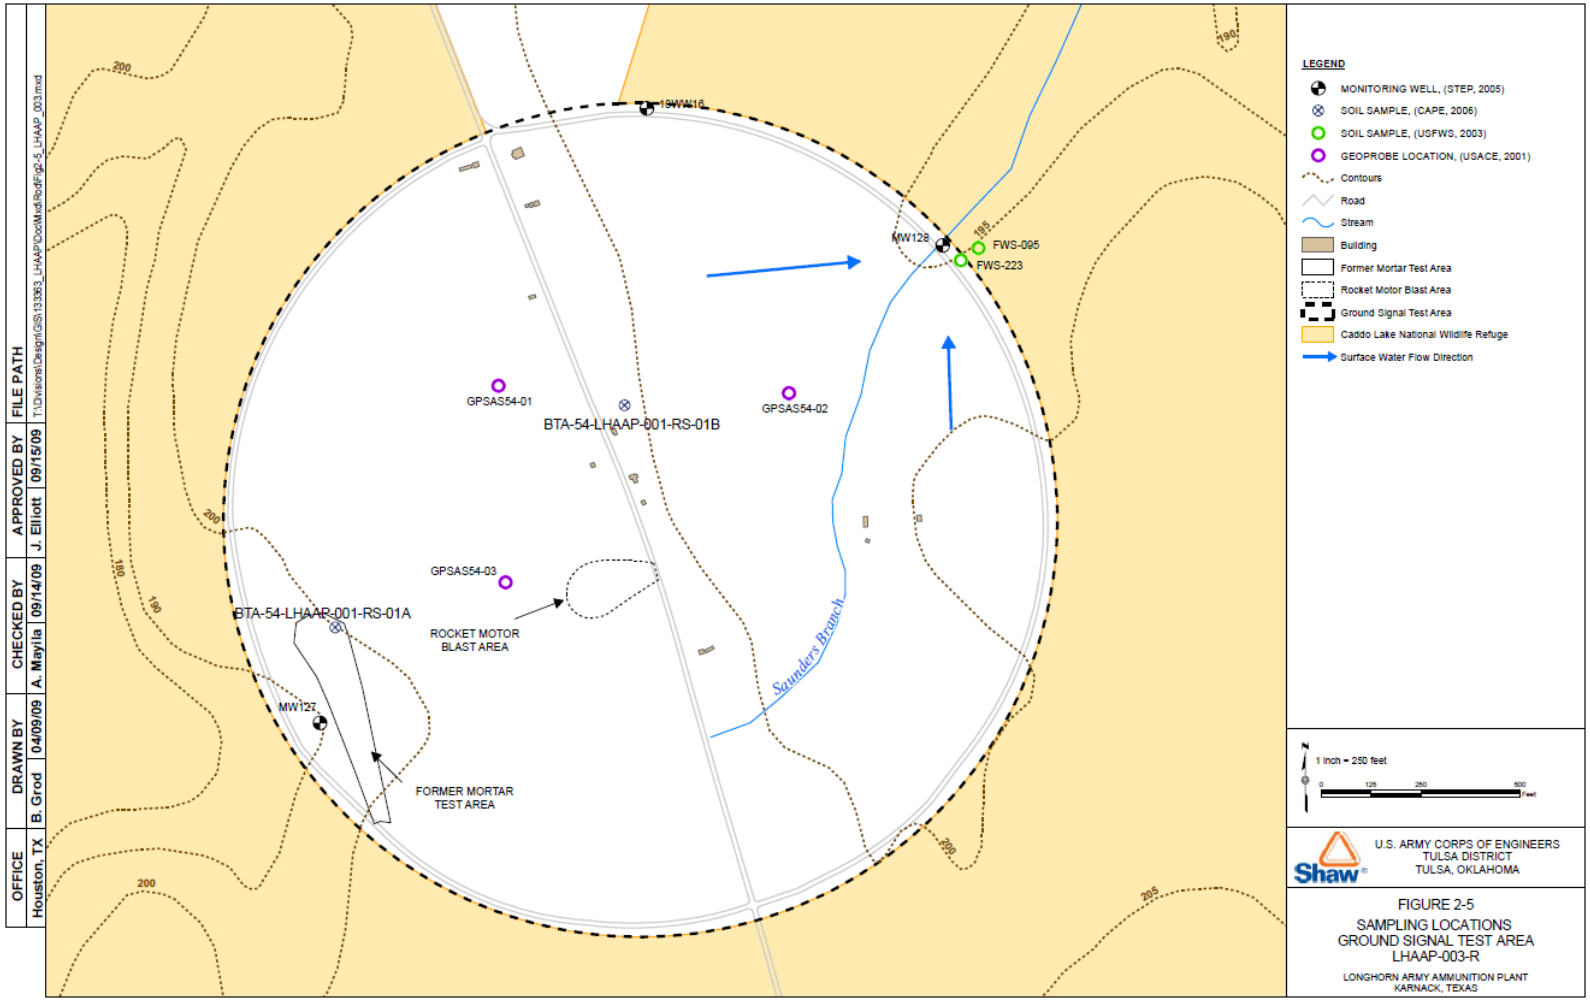
Sample ID: Sample Date:	Units	PCL	131-092816 9/28/2016	132-092816 9/28/2016	132FD-092816 9/28/2016	27WW01-092816 9/28/2016	27WW02-092816 9/28/2016	27WW03-092816 9/28/2016	27WW04-092816 9/28/2016
Perchlorate (6850)									
PERCHLORATE	ug/L	17	<0.2 U	<0.2 U	<0.2 U	<0.2 U	0.705	<0.2 U	<0.2 U

PCL – Texas Risk Reduction Program (TRRP) Tier 1 Groundwater Residential Protective Concentration Level

U - Undetected: The analyte was analyzed for, but not detected.

ug/L - micrograms per liter

Post-ROD Limited Groundwater Monitoring Locations at LHAAP-003-R



LHAAP-003-R, Ground Signal Test Area

SELECTED REMEDY: Land Use Controls and Limited Groundwater Monitoring

Post-ROD Limited Groundwater Monitoring Results for LHAAP-003-R

LHAAP-003-R Groundwater Sampling Results - September 2016

Sample ID: Sample Date:	Units	PCL	127-092916 9/29/2016	128-092916 9/29/2016	128FD-092916 9/29/2016	18WW16-092916 9/29/2016
Perchlorate (6850)						
PERCHLORATE	ug/L	17	<0.2 U	<0.2 U	<0.2 U	5.32

PCL – Texas Risk Reduction Program (TRRP) Tier 1 Groundwater Residential Protective Concentration Level

U - Undetected: The analyte was analyzed for, but not detected.

ug/L - micrograms per liter

Next Deliverables for the Four Disputed ROD Sites Under the New PBR Contract

- LHAAP-16 Draft Remedial Action Work Plan Report
- LHAAP-17 Draft Pre-Design Investigation Report
- LHAAP-001-R Draft Land Use Control Remedial Design (RD)
- LHAAP-003-R Draft Land Use Control RD

Deliverables, Environmental Contract Ending

- Current AECOM PBR contract ends September 30, 2017
- The remaining AECOM contract deliverables (reports and plans) are:
  - Final LHAAP-16 Remedial Design (RD)
  - Final LHAAP-18/24 Revised FS
  - Final LHAAP-37 Remedial Action Completion Report (RACR) – Complete, however EPA is waiting until groundwater rebounds to pre-Bio plug study conditions to issue Certificate of Completion
  - Final LHAAP-50 Year 2 RA-O Report
  - Final LHAAP-67 Year 1 and Year 2 RA-O Reports

Deliverables, Environmental Contract Ending (cont.)

- Groundwater monitoring will continue at LHAAP-18/24; results from each event will be documented in a data validation package
- GWTP Operation and Maintenance, Perimeter Wells and Surface Water Sampling; and Mowing/LUC Monitoring will be performed throughout the remaining contract period of performance (September 30, 2017)

Defense Environmental Restoration Program (DERP) Update

- **Monitored Natural Attenuation Sites Updates**
  - LHAAP-35B (37) – Chemical Laboratory
  - LHAAP-46 – Plant Area 2
  - LHAAP-50 – Former Sump Water Tank
  - LHAAP-35A (58) – Shops Area
  - LHAAP-67 – Aboveground Storage Tank Farm
- Land Use Control Boundary Surveys for groundwater use restriction are complete for all sites
- Final Remedial Action Completion Reports (RACRs) are complete for all MNA sites;
  - Certificate of Completion for LHAAP-35B(37) will not be issued until site groundwater rebounds to pre-Bio plug study conditions
- Year 1 and Year 2 Remedial Action Operation (RA-O) report for LHAAP-46 and LHAAP-58 are final
- Year 1 RA-O report for LHAAP-50 is final and Year 2 RA-O report is draft final
- Year 1 and 2 RA-O reports for LHAAP-67 are draft final
- Year 3 RA-O reports for LHAAP-46 and LHAAP-67 have been drafted
- Quarterly/Semi-Annual Groundwater Monitoring under the current PBR contract is complete for all MNA sites

LHAAP-04 Activities

- Final ROD has received Army signature
- Awaiting EPA signature and TCEQ concurrence

LHAAP-29 - Former TNT Production Area Update

- To address remedy design and implementation questions at the Draft Final ROD stage, the Remedial Investigation (RI) and Feasibility Study (FS) were re-opened to fill data gaps and a Supplemental Investigation was performed
- An RI Addendum based on the Supplemental Investigation results for LHAAP-29 was submitted to EPA and TCEQ and was approved by EPA with TCEQ concurrence in August 2016. The Final RI Addendum documents achievement of the following objectives:
  - Confirmed the extent of methylene chloride DNAPL in the Intermediate Zone groundwater
  - Confirmed the extent of VOC, perchlorate, and explosives contamination in the Shallow Zone groundwater
  - Determined there is no continuing source of VOC contamination in site soil
  - Characterized physical properties (resistivity, hydraulic conductivity, etc.) and microbial activity in Intermediate Zone to support further FS evaluation of remedial alternatives
- An FS Addendum, which incorporates the supplemental data in the Final RI Addendum to develop and evaluate an additional remedial alternative not included in the previous FS, has been drafted

LHAAP-18/24 Former Burning Ground No. 3 and Unlined Evaporation Pond Update

- To evaluate remedial alternatives for LHAAP-18/24, a Draft Revised FS was submitted to EPA and TCEQ; the agencies have provided comments, and the Draft Final Revised FS is in preparation
- The FS was revised to address data gaps and incorporate new data, as well as address 1,4-dioxane, for which a contingency remedy was developed
- The Revised FS also uses supplemental data obtained between February and June 2016, which is documented in the Final Supplemental to the Updated Post-Screening Investigation Report, which includes:
  - DPT soil sampling at 17 locations and analysis for VOCs and perchlorate
  - Installation of seven additional monitoring wells (three screened in the Shallow Zone and four in the Wilcox Fm.), with soil samples collected from well borings to create a vertical profile of VOCs and perchlorate in the unsaturated zone

LHAAP- 47 Plant Area 3 Update

- Final LHAAP-47 Post-Screening Investigation Work Plan was reviewed and approved by EPA with TCEQ concurrence on September 30th
  - Objectives:
    - ✓ Re-assess VOCs and perchlorate in Shallow Zone and Intermediate Zone groundwater, and
    - ✓ Re-assess potential VOC- and perchlorate-contaminated groundwater contribution to surface water in Goose Prairies Creek and tributaries
  - Scope:
    - ✓ Collection of two grab groundwater samples from each of seven Shallow Zone soil borings and six Intermediate Zone soil borings, and analysis for VOCs and perchlorate;
    - ✓ Installation and development of 13 Shallow Zone monitoring wells and 4 Intermediate Zone monitoring wells
    - ✓ Re-development of existing wells and synoptic water level survey of all site wells
    - ✓ Collection and analysis of groundwater samples from the new wells and up to 30 existing Shallow Zone wells and 10 existing Intermediate Zone wells for VOCs, and/or perchlorate, plus additional constituents included in the ROD
    - ✓ Collection and analysis of four surface water samples for perchlorate and VOCs
- Post-Screening Investigation will be implemented under the next PBR contract

Groundwater Treatment Plant (GWTP) Update

- A failure of the flange bolts on the TK-380 Acid Storage Tank occurred sometime over the weekend between Friday 12/9/16 and Monday 12/12/16
- When the plant operators returned on 12/12/16, they discovered approximately 1,200 gallons of hydrochloric acid (HCl) were released inside the secondary containment; No RELEASE OCCURRED TO THE ENVIRONMENT

GWTP Update (continued)

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

Protecting Texas by Reducing and Preventing Pollution

February 7, 2017

Mr. Thomas E. Lederle
Chief, ACSIM BRAC Division
2530 Crystal Drive, Room 5000
Taylor Bldg./NC3
Arlington, Virginia 22202

Re: Record of Decision for LHAAP-04, Former Pilot Wastewater Treatment Plant
Longhorn Army Ammunition Plant Superfund Site TX6213820529 (TCEQ ID: SUP126)
Karnack, Harrison County, Texas

Dear Mr. Lederle:

The Texas Commission on Environmental Quality (TCEQ) received the final Record of Decision (ROD) for the LHAAP-04, Former Pilot Wastewater Treatment Plant, at the Longhorn Army Ammunition Plant Federal Superfund Site in Karnack, Texas on January 3, 2017. The TCEQ has completed the review of the above referenced document and concurs that the response action described in the ROD is the most appropriate remedy for LHAAP-04.

Sincerely,

Richard A. Hyde, P.E.
Executive Director

cc: Mr. Carl Edlund, P.E., Director, Superfund Division, U.S. Environmental Protection Agency, Region 6

Subject:	**Final Minutes, Monthly Managers' Meeting, Longhorn Army Ammunition Plant (LHAAP)**
Location of Meeting:	**Teleconference – 844-712-3247, Passcode 32317675**
Date of Meeting:	**March 28, 2017 – 10:00 AM**

Attendees:

Army BRAC:	Rose Zeiler (RMZ)
AEC:	Nick Smith (NS)
EPA:	Rich Mayer (RM), Kent Becher (KB) (USGS Liaison), Barry Forsythe (BF), Dorelle Harrison (DH)
TCEQ:	April Palmie (AP)
USACE:	Aaron Williams (AW)
AECOM:	Elspeth Sharp (ES), Craig Holloway (CH), JoLynn Snow (JS)
USFWS:	Paul Bruckwicki (PB)

Welcome **RMZ**

Action Items

AECOM

- Update on GWTP operations. **In Progress** - Summary of activities and progress over the last 4 weeks:
  - CH discussed that AECOM has been collecting effluent samples and in mid-March achieved levels below discharge criteria. AECOM subsequently discharged a portion of the treated water to Harrison Bayou.
  - On March 24, 2017, AECOM began extracting groundwater from ICTs 12E, 13A, 13B, 13C, 13D, 13E, 13F, 14A, 14B, and 14E.
  - An effluent sample will be collected Wednesday, March 29, 2017, with 24-hour turn-around-time so results are received by Friday. Another sample will be collected when the treatment system is close to capacity to determine if discharge criteria are met and if discharge to Harrison Bayou can resume. If discharge criteria are not met, a request to irrigate to LHAAP-18/24 will be made. CH is tracking extraction rates and storage capacities.
  - AW stated that EPA and TCEQ have questions about the plan to sprinkle at LHAAP-18/24. CH and ES stated that 3 sprinkler heads on each line will be used at a time, and only one line will be used for sprinkling each day. The plan is for the groundwater treatment plant operator to check sprinklers twice per day to make sure there is no ponding. If ponding or runoff is observed, discharge via that sprinkler line will cease, and a different line will be used. AW asked if lines could be switched more often during the day. AP stated that she believes it is necessary to switch more often during the day, that ponding will occur if sprinkling is from one line for 8 hours per day. ES concurred that multiple lines could be used a day to avoid ponding. ES stressed that sprinkling to LHAAP-18/24 is not the preferred method and would be the last resort.
  - AW asked when the ion exchange system is going to be online. ES and CH noted that delivery is ahead of the original scheduled date (installation by April 28), and it will likely be delivered in a couple of weeks. AW noted that based on the expected delivery

date of the ion exchange system, sprinkling to LHAAP-18/24 would only be for a couple of weeks, if needed. CH confirmed. CH will send the group the specifications for the ion exchange system.
  - ES discussed the possibility of Harrison Bayou going dry in the near future. She stated that AECOM is preparing the INF Pond to receive treated effluent.
- Review the December 2016 elevated perchlorate result for 18WW08.
  - The December 9, 2016 perchlorate result was 2,390 µg/L, but in June 2016 the perchlorate result was below the detection limit. ES stated that historically the levels were high (36,300 µg/L in 2002; 2,700 µg/L in 2010) but decreased in 2013 and 2014 to non-detect levels in June 2016. The change may be related to groundwater elevation. Although there was not a perfect correlation between the changes in groundwater elevation and the perchlorate concentration, there is a pattern of increased perchlorate concentrations when groundwater elevation is decreased. This well was sampled in March 2017, and these results will be scrutinized further. KB asked if it is possible that a bottle got switched. ES noted that is a possibility, but the March 2017 results will provide more information.

Army
- No outstanding action items.

EPA
- Flow measurements and surface water sampling performed March 9, 2016.
  - KB stated that surface water samples were collected from five locations from Harrison Bayou and from one location at the wetland area adjacent to LHAAP-17. KB expects to receive the surface water sample results in the next couple of weeks and will distribute the field report when complete.
  - RM asked if the results should be presented at the April RAB. RMZ stated that the site tour is planned for the April RAB, so RMZ said it would be better to wait until the next RAB (July).

TCEQ
- No outstanding action items.

AEC
- Schedule for draft CRP/CIP update. NS stated that the contractor is working on it.

USFWS
- No outstanding action items.

Schedule Review **RMZ**
- Restoration – RMZ said there is nothing to discuss until the next contract is in place.
- Contract – AW has nothing to report during this meeting.

Defense Environmental Restoration Program (DERP) PBR Update **AECOM**
ES asked everyone to refer to the Document and Issue Tracker dated 3/28/17, which was distributed with the agenda. It includes currently projected dates for submittal of remaining project milestone deliverables to EPA and TCEQ.

- Item 1 (GWTP Quarterly Report) – ES said the draft GWTP report for Q2 2016 is currently in preparation and will incorporate responses to agency comments on the Q1 2016 report in a separate section of the report. Submittal to EPA and TCEQ is planned for the week of 4/10/17. Submittal of the Q3 2016 report is planned for the week of 5/19/17 and the Q4 2016 report is planned for the week of 6/9/17.

- The following items are complete and not discussed:
  - Item 2 – Supplemental to Updated LHAAP-18/24 PSI Addendum
  - Item 2-1- LHAAP-18/24 Data Gap Sampling
  - Item 2-2 - Previous Regulatory Comments on LHAAP-18/24 FS
  - Item 2-3 - LHAAP-18/24 Revised FS

- Item 3-1 (LHAAP-37 RACR) – Tech memo concluding site has returned to pre-test conditions was finalized on 3/7/2017. ES, RMZ and RM discussed that EPA will issue Certification of Completion.

- The following items are complete and not discussed:
  - Item 4 - LHAAP-46 RACR
  - Item 5 - LHAAP-50 RACR
  - Item 6 - LHAAP-58 RACR
  - Item 7 - LHAAP-67 RACR
  - Item 8 - LHAAP-12 2015 Annual Report

- Item 8-1 (LHAAP-12 2016 RA-O Report) – ES said the validated data for groundwater samples collected in December 2016 were provided to EPA and TCEQ on 2/23/17 in the January 2017 Data Validation Package attachment to the February 2017 MMM agenda. Submittal of the Draft report is planned for the week of 5/15/17.

- Item 9 (LHAAP-46 Yr. 1 and Yr. 2 RA-O Reports) is complete, so was not discussed.

- Item 9-1 (LHAAP-46 Yr. 3 RA-O Report) – The draft report was submitted to TCEQ and EPA on 3/8/17. TCEQ and EPA accepted the Draft as Final with no comments on 3/14/17 and 3/15/17, respectively. Final cover pages and electronic document were sent to TCEQ and EPA on 3/24/17.

- Item 10-1 (LHAAP-67 Yr. 1 RA-O Report) and Item 10-2 (LHAAP-67 Yr. 2. RA-O Report) are complete, so were not discussed.

- Item 10-3 (LHAAP-67 Yr. 3 RA-O Report) – The draft report was submitted to TCEQ and EPA on 3/7/17. Received TCEQ and EPA comments on 3/14/17. Submittal of the Draft Final report is planned for the week of 3/29/17.

- Item 11-1 (LHAAP-50 Yr. 1 RA-O Report) is complete, so was not discussed.

- Item 11-2 (LHAAP-50 Yr. 2 RA-O Report) – is complete, so was not discussed.

- Item 12-1 (LHAAP-58 Yr. 1 and Yr. 2 RA-O Reports) are complete, so were not discussed.

- Item 12-2 (LHAAP-58 Contingency Remedial Action Work Plan) is complete, so was not discussed.

- Item 13 (MMM) – EPA and TCEQ provided concurrence with January 2017 minutes on 3/7/17 and 3/8/17, respectively. Draft February 2017 MMM minutes were submitted to EPA and TCEQ for review on 3/27/17. The next MMM meeting will be held at 10:00 CST on Thursday, April 27, 2017 at the LHAAP site trailer.

- Item 14-1 (LHAAP-29 RI Addendum) is complete, so was not discussed.

- Item 14-2 (LHAAP-29 FS Addendum) – AW said they plan on having comments back to AECOM next week and submittal will go to EPA and TCEQ.

- Item 15-1 (LHAAP-47 PSI Work Plan) is complete, so was not discussed.

- Item 15-2 (LHAAP-16 RD) is complete, so was not discussed.

- Item 15-2a (LHAAP-16 RD Post ROD Requirements) is complete, so was not discussed.

- Items 15-3 (LHAAP-17 RD) – The Army is deferring the RD to the next PBR contract.

- Item 15-3a (LHAAP-17 PDI WP) is complete, so was not discussed.

- Item 15-3b (LHAAP-17 Post-ROD Requirements) is complete, so was not discussed.

- Item 15-4 (LHAAP-001-R-01 RD/RDWP) – The Army is deferring the LUC RD to the follow-on PBR contract, so this item was not discussed.

- Item 15-4a (LHAAP-001-R-01 Limited LTM) and Item 15-4b (LHAAP-001-R-01 Post-ROD Requirements) are complete, so were not discussed.

- Item 15-5 (LHAAP-003-R-01 RD/RDWP) – The Army is deferring the LUC RD to the follow-on PBR contract, so this item was not discussed.

- Item 15-5a (LHAAP-003-R-01 Limited LTM) – is complete, so was not discussed.

- Item 15-5b (LHAAP-003-R-01 Post-ROD Requirements) is complete, so was not discussed.

- Item 15-6 (LHAAP-04 ROD) – The ROD is expected to be signed soon.

- Item 15-7 (Site-wide LUC Management Plan) – The FY2016 Revision Log and signed transmittal letters will be entered into the next Admin Record update.

- Item 16 (RAB/Website) – Submitted Draft January 2017 RAB meeting minutes to RAB members on 3/7/17. The next RAB meeting will be a site tour on 4/27/17 at 5:00 PM CST.

- AP asked what the plan is for the next RAB meeting. ES discussed that there would be a site map handed out for the site tour. A fact sheet for LHAAP-16 RD will also be provided.
- AW said there will be an update on the GWTP operation and contract status.

· Item 17-1 (GWTP O&M – GWTP Sampling and Optimization Memo) is complete so was not discussed.

· Item 17-2 (GWTP Sampling and Analysis Plan) – AECOM to submit memo recommending removal of mercury from GWTP influent/effluent sampling. Final Sampling and Analysis plan will be updated.

· Item 17-3 (GWTP Continuing O&M) – discussed earlier under AECOM Action Items.

· Item 18 (Admin. Record Update) – The 2016 AR Q4 update is currently in preparation and is planned for submittal by 4/21/17.

· Item 19 (LHAAP-02) is complete so was not discussed.

· Item 20 (LHAAP-37 Geochemical Rebound) – The Draft Tech Memo was submitted to EPA and TCEQ on 2/28/17. Received acceptance from EPA and TCEQ on 3/7/17.

· Item 21 (Smart Map) – AECOM continues to upload current data to the Smart Map. Available boring logs and construction diagrams will also be uploaded.

· Upcoming/ongoing field work: LHAAP-02 Year 2 Semiannual Event, April 2017

· Monthly data – See attached February 2017 Validated LHAAP Data.

· Groundwater Treatment Plant Operations – Discussed earlier in meeting.

MMRP Update **Army**

· RMZ, AW, and PB discussed the transferring of LHAAP-003-R will not happen until the next contract because the LUC has not been recorded with the county. Recording the LUC will be one of the first actions under the new contract.

Other Environmental Restoration **Army**

· Quarterly Reporting and Requirements
  - GWTP Evaluation
  - Surface Water/Perimeter Well Quarterly Update
  - Administrative Record Update
  - Website Update
· Annual Reporting
  - LUC Management Plan Update – no update.
· CRP/CIP Revision (Biennial) – discussed earlier in meeting.

USFWS Update

- No update.

Schedule Next Managers' Meeting

- April 2017 MMM will be held in the LHAAP site trailer on 4/27/17 at 10:00 CST.

Other Issues

- RM mentioned elevated perchlorate result at GPW-1A in the validated data package. ES stated that sample was associated with LHAAP-50.

Adjourn

Attachments:

- **February 2017 Validated LHAAP Data:**
  - GWTP Effluent: Weekly, Bi-weekly, Monthly, and Additional Sampling (January, February, March 2017)
  - GWTP Influent: Monthly (February 2017)
  - Surface Water: January/February 2017

Re: Draft Final 3rd Annual Remedial Action Operation Report for LHAAP-67, Above Ground Storage Tank Farm at Longhorn Army Ammunition Plant, Karnack, Texas

Dear Mr. Mayer,

The above-referenced document is being transmitted to you for your records and includes revisions based upon your comments on the Draft. In accordance with the FFA, the Draft Final will be considered Final after 30 days without further comment.

The document was prepared by AECOM on behalf of the Army as part of AECOM's Performance Based Remediation contract for the facility. I ask that Elspeth Sharp, AECOM's Project Manager, be copied on any communications related to the project.

The point of contact for this action is the undersigned. I may be contacted at 479-635-0110, or by email at rose.m.zeiler.civ@mail.mil.

Sincerely,

Rose M. Zeiler

Rose M. Zeiler, Ph.D.
Longhorn AAP Site Manager

Responses to Comments on
Draft 3nd Annual Remedial Action Operation Report for Site LHAAP-67 (Above Ground Storage Tank Farm)
Longhorn Army Ammunition Plant, Karnack, Texas

March 2017

Reviewer: Richard Mayer, EPA

Respondent: Elspeth Sharp, Jen Bush, AECOM

1. Respondent Concurs (C), Does Not Concur (D), Takes Exception (E), or Delete (X).
2. Commentor Agrees (A) with response, or Does not Agree (D) with response.

Comment #	Page	Section/ Paragraph	Comment	C, D, E or X[1]	Response	A or D[2]
1	1-3	Section 1.4, 5th Paragraph	Vinyl Chloride should be added as a site contaminant per the results of monitoring well 67WW01. Monitoring well 67WW13 also has had vinyl chloride above the TRRP PCLs, but none since January of 2014.	C	Additional text has been added to Section 1.4, paragraph 5 noting that vinyl chloride detections at 67WW01 exceed the MCL of 2 µg/l during the third year RA(O) monitoring period. Note: Vinyl Chloride has an MCL and accordingly is not subject to TRRP PCLs.	
2		Figures 2-5 thru 2-7	Please add the vinyl chloride results for monitoring well 67WW01.	C	Vinyl chloride concentrations have been added to Figures 2-5 through 2-7 for all monitoring wells.	
3	3-4	4th Paragraph	Since the groundwater flow direction appears to be to the north-northwest, there may be a need to install a groundwater monitoring well to the north-northwest of 67WW02 for delineation if the well continues to show exceedances. The same comment would apply for the area north-northwest of the wells 67WW14, 67WW15 and 67WW13.	C	The following text has been added to Section 3.1.1 (Plume Stability) and Section 4 (Summary and Conclusions): If 67WW02 COC concentrations remain above the MCL, a new downgradient monitoring well outside the MCL boundary would be needed in the future to provide a downgradient compliance well/sentry point. Also, an additional well downgradient of 67WW13, 67WW14, and 67WW15 (between 67WW05 and 67WW15) may be necessary to monitor plume migration and attenuation.	
4		General	Has the Army considered re-development of the wells that go dry at this site when bailing?	E	Given that wells 67WW01, 67WW02, 67WW05, and 67WW07 typically have less than 5 feet of water in the water column when gauged, these wells have historically been bailed (rather than pumped) until dry and sampled within 24 hours in accordance with the SOP (AECOM, 2014). Therefore, re-development of these wells is not warranted.

1. Respondent Concurs (C), Does Not Concur (D), Takes Exception (E), or Delete (X).
2. Commentor Agrees (A) with response, or Does not Agree (D) with response.

Comment #	Page	Section/ Paragraph	Comment	C, D, E or X[1]	Response	A or D[2]
1		Figures	Figures need to include the LUC boundary	C	Figures 2-2 through 2-7 have been updated to include the LUC boundary.	
2		Figure 2-6	Figure 2-6 is missing the 67WW01 well label	C	A well label has been added to Figure 2-6 for 67WW01.	
3		Figure 2-5 and 2-7	For Figures 2-5 and 2-7 the contour for 1,1-DCE MCL line should be much closer to 48th Street or even across it.	C	The 1,1-DCE 7 µg/L contour on Figure 2-5 has been drawn closer to 67WW02 and on Figure 2-7 has been drawn further north of 67WW02. The 7 µg/L contour north of 67WW02 on Figure 2-7 will be dashed to show the contour is inferred, since there is not a bounding well to the north.	
4			Based on recent results for 67WW02, the 1,1-DCE plume is not delineated to the north. Given groundwater flow direction and the concentrations in 67WW15 and 67WW02, we should be looking into installation of additional monitor wells a) north of 67WW02 and b) between 67WW15 and 67WW05 (close to corner of Ignatius and 48th). These wells would either delineate the plume or serve to monitor plume migration and attenuation.	C	The following text has been added to Section 3.1.1 (Plume Stability) and Section 4 (Summary and Conclusions): If 67WW02 COC concentrations remain above the MCL, a new downgradient monitoring well outside the MCL boundary would be needed in the future to provide a downgradient compliance well/sentry point. Also, an additional well downgradient of 67WW13, 67WW14, and 67WW15 (between 67WW05 and 67WW15) may be necessary to monitor plume migration and attenuation.	
5			It is likely the groundwater plume is outside of the LUC boundary north of 66WW02. This will need to be verified and addressed.	C	Noted.	
6			If 1,1-DCE or 1,2-DCA concentrations increase in 67WW14, a well may need to be installed to the west for delineation and LUC boundary monitoring.	C	The following sentence has been added to Section 3.1.1 and Section 4: If the plume continues to also shift west, as demonstrated by increased concentrations at 67WW14, installation of a monitoring well west of 67WW14 may be needed to confirm the plume is not migrating beyond the monitoring well network at levels exceeding MCLs.

1 INTRODUCTION

The United States (U.S.) Army Corps of Engineers (USACE), Tulsa District, contracted AECOM Technical Services, Inc. (AECOM), to perform remedial activities at multiple sites at the former Longhorn Army Ammunition Plant (LHAAP), Karnack, Texas, under the Huntsville District's Worldwide Environmental Restoration Services Contract Number (No.) W912DY-09-D-0059, Task Order No. DS01. As part of this contract, AECOM is performing groundwater and surface water monitoring as part of Remedial Action Operations (RA(O)) for the Monitored Natural Attenuation (MNA) groundwater remedy at site LHAAP-67. A Final Record of Decision (ROD) was executed for LHAAP-67 in June 2010 (USACE, 2010). Groundwater monitoring at LHAAP-67 is ongoing as described in the Draft Final Remedial Action Completion Report (RACR) (AECOM, 2015). This RA(O) report represents the third year of RA(O) implementation and summarizes the results of site inspections and sampling activities completed between July 2015 and May 2016. A draft first year RA(O) report which covers the period between May 2013 and May 2014 was prepared in March 2015. A draft second year RA(O) report which covers the period between July 2014 and May 2015 was prepared in February 2016. This report encompasses and provides analysis for three years of MNA data.

LHAAP is located in east Texas in the northeastern corner of Harrison County between State Highway 43 in Karnack, Texas, and the western shore of Caddo Lake (see **Figure 1-1**). The nearest cities are Marshall, Texas, approximately 14 miles to the southwest, and Shreveport, Louisiana, approximately 40 miles to the east. Caddo Lake is a large freshwater lake that bounds LHAAP to the north and east. The eastern fence of the LHAAP installation is 3.5 miles from the Texas-Louisiana state border.

1.1 Remedial Action Objectives

The Remedial Action Objectives (RAOs) at the LHAAP-67 site must protect human health and meet applicable or relevant and appropriate requirements. There are no ecological risks at the LHAAP-67 site (USACE, 2010).

The RAOs for the LHAAP-67 site, consistent with the reasonably anticipated future use as a national wildlife refuge, are:

- Protection of human health by preventing human exposure to the contaminated groundwater;
- Protection of human health and the environment by preventing contaminated groundwater from migrating into nearby surface water; and
- Return of groundwater to its potential beneficial use as drinking water, wherever practicable.

1.2 Performance Objectives

The remedy selected for LHAAP-67 is Land Use Control (LUC) and MNA. The performance objectives at LHAAP-67 consist of two components: physical inspections and groundwater/surface water monitoring. As a component of the LUC implementation, the civil survey of the LUC boundary was conducted in November 2014 and recorded in the Harrison County Courthouse in December 2014. Physical inspections are conducted periodically to

confirm compliance with the LUC objectives, which consist of preventing human exposure to groundwater contamination presenting an unacceptable risk to a future maintenance worker and ensuring that there is no withdrawal or use of groundwater from the site for anything other than environmental monitoring and testing until the cleanup levels are attained. Groundwater monitoring has been in-progress at the site since May 2013, and LHAAP-67 will also have Five-Year Reviews completed as part of the site wide Longhorn Five-Year Review.

According to the Remedial Design (RD), groundwater monitoring is being performed to demonstrate that natural attenuation is an effective remedy that will attain the remediation objectives over time and that the groundwater plume will not migrate to nearby surface water bodies at levels that may present an unacceptable risk to human health and the environment (Shaw, August 2011). Groundwater monitoring is being performed in accordance with the Remedial Action Work Plan (RAWP) (AECOM, 2013) to:

- Detect changes in environmental conditions that may reduce the efficacy of natural attenuation processes;
- Identify potentially toxic and/or mobile transformation products;
- Verify that the plume is not expanding and poses no unacceptable risk to downgradient receptors;
- Detect new releases of contaminants to the environment that could impact effectiveness of the natural attenuation remedy; and
- Verify attainment of the remediation objectives.

Work completed as part of the 2015/2016 RA(O) consisted of the following:

- November 2015 groundwater monitoring event consisting of 15 wells;
- March 2016 groundwater monitoring event consisting of 2 wells (67WW01 and 67WW03);
- Installation of groundwater monitoring wells 67WW15 and 67WW16I in May 2016; and
- May 2016 groundwater monitoring event consisting of 17 wells.

This report summarizes the LUC compliance inspection, results of groundwater sampling, and an evaluation of MNA.

1.3 Site Description

LHAAP-67 is in the central portion of LHAAP, on the southeast corner of 48th Street and Ignatus Avenue (see **Figure 1-2**), and covers an area of approximately 1.9 acres. The site topography is relatively flat. The nearest significant surface water body is Central Creek located approximately 870 feet (ft) southeast of LHAAP-67. Central Creek eventually flows into Caddo Lake.

When operational, LHAAP-67 consisted of seven above ground storage tanks (ASTs) used for storing No. 2 fuel oil, kerosene, and solvents. The size of the tanks is unknown. The tanks were surrounded by earthen dikes designed to contain potential spills. The ASTs have been removed and the only structure remaining at the site is a railroad bed.

The LUC area associated with the groundwater use restriction at LHAAP-67 extends beyond the historical site boundaries along the western, eastern, and southern sections of the site, and encompasses a total of 2.6 acres. LHAAP-67 has no known areas of archaeological or historical importance.

1.4 Conceptual Site Model

A detailed Conceptual Site Model of LHAAP-67 was previously presented in the ROD (USACE, 2010). Based upon additional data collected as part of final remedy implementation as presented in the LHAAP-67 Final RACR (AECOM, 2016), the lithologic units at the site have been reclassified.

Historically, two distinct water-bearing zones (shallow and intermediate) had been designated at LHAAP-67; however, during drilling performed for the 2013 investigation, no continuous clay layer (i.e., aquitard) or significant lithological differences between previously identified shallow and intermediate zones were encountered. Co-located monitoring wells 67WW06 (total depth 49.83 ft below ground surface [bgs]) and 67WW07 (total depth 27.86 ft bgs), historically identified as intermediate and shallow zone wells, respectively, had similar static groundwater levels during the four sampling events performed during 2013/2014, with a maximum difference of 1.04 ft noted during the January 2014 event (these small differences were confirmed in the four 2014/2015 sampling events with a maximum difference of 0.08 ft). Therefore, the previously designated shallow and intermediate zones are now considered to be hydraulically connected and constitute a single uppermost groundwater-bearing unit at LHAAP-67 to a depth of approximately 50 ft bgs. Monitoring well 67WW06, which was previously identified as an intermediate zone well, is now re-classified as a shallow zone monitoring well, screened in the uppermost groundwater-bearing unit.

A deeper "intermediate" water-bearing zone was identified at a depth of approximately 68 ft bgs in boring 67DPT14 (drilled in June 2014) with a clear aquitard separating this unit from the shallow zone.

Based on this information, shallow and intermediate water-bearing zones are present in the LHAAP-67 investigation area, but the configuration has been modified from that presented in the RD as discussed above.

The contaminants of concern (COCs) identified in the ROD for LHAAP-67 shallow zone groundwater are trichloroethene (TCE), 1,1-dichloroethene (1,1-DCE), 1,2-dichloroethane (1,2-DCA), 1,1,1-trichloroethane (1,1,1-TCA), and 1,1,2-trichloroethane (1,1,2-TCA). It is also noted that vinyl chloride (VC), a degradation product of TCE, was detected during the third year RA(O) period at 67WW01 with concentrations exceeding the MCL of 2 µg/L. The presence of these COCs in the shallow groundwater zone represents the primary driver for remedial action as they are at concentrations above the human health standard for a hypothetical future maintenance worker under an industrial exposure scenario. There are no ecological risks at the LHAAP-67 site.

The nature and extent of groundwater contamination at LHAAP-67 was evaluated during field investigations conducted between 1998 and 2007. It is believed that historic releases from the ASTs at the site contaminated the soil, with contaminants then leaching from the soil into groundwater. A relatively small area of contamination is observed in the shallow groundwater

which poses an unacceptable carcinogenic risk and non-carcinogenic hazard to a hypothetical future maintenance worker under an industrial exposure scenario. There is no groundwater contamination in the deeper "intermediate" groundwater zone. The only potentially complete exposure pathway is via use of shallow-zone groundwater as drinking water. However, shallow groundwater is not used as drinking water at the refuge and the pathway is eliminated from any hypothetical receptor because land use controls are in place that prohibit the use of groundwater other than for environmental monitoring and testing. The nearest significant surface water body to LHAAP-67 site is Central Creek, located upgradient and approximately 870 ft from the site. There is no other surface water body in close proximity to the LHAAP-67 site. Therefore, there is no demonstrated complete pathway from groundwater to surface water.

Based on groundwater level data collected in 2015/2016, the dominant shallow zone groundwater gradient appears to be to the north/northwest. The gradient is based on data collected from up to 17 monitoring wells. An earlier draft RA(O), prepared for year 1 in March 2015, indicated that the dominant shallow zone groundwater gradient appeared to be to the north/northeast, but the flow direction began to shift direction by May 2014 towards the north/northwest and continued to show a north/northwesterly flow direction for the entire second and third year RA(O) reporting periods. The apparent change of the shallow zone groundwater gradient may be due to the increase in precipitation the area received during the current monitoring period (i.e., 2015/2016), particularly in 2015, and the resulting rise in groundwater levels. The historical gradient was originally assumed to be to the southeast in the Final RD (Shaw, August 2011) and was based on data collected primarily from three monitoring wells because some of the wells such as 67WW03 and 67WW04 were dry most of the time. Therefore, potential discharge to surface water in Central Creek became an incomplete exposure pathway and surface water sampling as stated in the RAWP was deemed no longer necessary.

To assess the deeper "intermediate" water-bearing zone, a temporary well was installed in soil boring 67DPT14 in June 2014. The temporary well was completed to a depth of 78 ft bgs. Groundwater analyzed from 67DPT14 revealed that no COCs were detected.

As detailed in the RACR (AECOM, 2016), one additional shallow monitoring well, 67WW15, and one intermediate monitoring well, 67WW16I, were installed at the site in May 2016. Shallow well 67WW15 was installed to the west of the LHAAP-67 site boundary to evaluate the effectiveness of MNA in the western quadrant. Intermediate monitoring well 67WW16I was installed to confirm the results of the June 2014 direct push technology (DPT) groundwater sample and to allow continued monitoring of the intermediate zone groundwater. Both wells were initially sampled during the May 2016 monitoring event. The groundwater sample collected at 67WW15 identified the presence of COCs in this well. No COCs were detected in 67WW16I, confirming the June 2014 results from temporary well 67DPT14 and indicating that COCs are confined to the shallow zone groundwater.

2 SITE ACTIVITIES AT LHAAP-67

This section describes the results of the RA-O Year 3 annual LUC compliance inspection, groundwater and surface water monitoring, and monitoring system repairs and/or maintenance performed at LHAAP-67.

2.1 Annual LUC Compliance Inspection

AECOM performed the RA-O Year 3 annual LUC compliance inspection for LHAAP-67 on August 1, 2016. The LUC for this site is groundwater restriction, which prohibits water well installation for any purpose other than environmental monitoring and testing; and residential groundwater use until the levels of COCs in groundwater and soil allow unrestricted use and unlimited exposure. The restriction applies to groundwater underlying an approximately 6-acre area defined by the surveyed LUC boundary (AECOM, 2016). The Annual LUC Compliance Certification Documentation Form for the 3rd year RA(O) monitoring period is included in **Appendix A**. No non-compliance issues or concerns were noted during the annual inspection. No damage to bollards, well pads, or protective casings was observed during the Year 3 inspection and minimal encroachment of weeds or brush on the well pads was observed. Area mowing and clearing around the wells is conducted on an as needed basis, but typically is done before sampling events. Maintenance activities that were performed at LHAAP-67 during RA-O Year 3 are presented in Section 2.4.

2.2 Groundwater Monitoring

The 3rd year RA(O) marks the beginning of three years of semiannual monitoring and associated annual reporting. Two semiannual groundwater sampling events were completed in November 2015 and May 2016 with an additional sampling event for wells 67WW01 and 67WW03 conducted in March 2016. The additional March 2016 event was conducted because monitoring wells 67WW01 and 67WW03 had been dry and could not be sampled during two or more sampling events in years 1 and 2 of MNA activities. An additional set of data was needed to better evaluate groundwater conditions at these wells.

As previously noted, an additional two wells, 67WW15 and 67WW16I, were installed in May 2016 to increase the total number of monitoring well at the site from 15 to 17. Monitoring well locations are depicted in **Figure 2-1;** drilling, well construction, and development logs; and survey information for the new monitoring wells installed in 2016 are provided in **Appendix G.**

Prior to collecting groundwater samples, monitoring wells were gauged using a water level probe and the depth to water was recorded to the nearest 0.01 ft from the top of casing. Depth to water measurements were used to calculate the groundwater elevations presented in **Table 2-1.**

If sufficient water was present in the well, a groundwater sample was collected. Monitoring wells 67WW03 and 67WW04 were gauged to be dry in November 2015 (both wells) and May 2016 (67WW04 only) and therefore were not sampled. As described in Sections 1.4 and 2.2.1, monitoring well 67WW06 was not sampled during the November 2015 and May 2016 semiannual sampling events due to its proximity to well 67WW07.

Groundwater samples were collected using the low-flow sampling procedures as described in the Groundwater Sampling Procedures found in the Installation-Wide Work Plan (IWWP) (AECOM, 2014). The objective of using this method was to collect representative samples of

the groundwater in the formation adjacent to the well screen, eliminating the mixing of stagnant water above and below the well screen. After water quality parameters stabilized and were within acceptable ranges, samples were collected at the same low flow rate.

2.2.1 Approved Modifications to the Groundwater Monitoring Program

During the first year of RA(O), minor modifications were made to the groundwater monitoring program, in coordination with U.S. Environmental Protection Agency (USEPA) and the Texas Commission on Environmental Quality (TCEQ).

- Monitoring well 67WW04: While monitoring well 67WW04 was utilized historically to bound the plume to the south, new monitoring wells 67WW09A and 67WW10 now serve that purpose, providing better refinement of the plume boundary within the LUC boundary. Groundwater elevations at monitoring well 67WW04 will continue to be gauged during each sampling event, but will no longer be sampled for volatile organic compounds (VOCs) or evaluated for field parameters. These wells will also continue to be maintained, as needed.
- Monitoring well 67WW06: Based on changes in designation of groundwater bearing zones at LHAAP-67 described in the RACR (AECOM, 2016), co-located shallow zone monitoring wells 67WW06 and 67WW07 are now considered duplicative. Monitoring well 67WW07 was retained for monitoring since it had a shallower screened interval, and monitoring well 67WW06 was discontinued from further monitoring; however, groundwater elevations at monitoring well 67WW06 will continue to be gauged during each sampling event.
- Monitoring wells 67WW01 and 67WW08 were selected in the RAWP for collection of MNA geochemical parameters. However, during the 1st year RA(O), monitoring well 67WW01 was dry on two occasions and had insufficient water to collect MNA geochemical parameters on a third event. Therefore, MNA geochemical parameters were instead collected from monitoring well 67WW11 in October 2013. However, based on an evaluation of COC concentrations and monitoring well locations with respect to the plume, it was determined in coordination with USEPA and TCEQ that future sampling for MNA geochemical parameters will occur at monitoring well 67WW13 in addition to 67WW08. Because this decision to sample 67WW13 instead of 67WW11 was made in April 2015, well into the 2nd year RA(O) monitoring period, MNA geochemical parameters were collected at monitoring well 67WW11 during the July and December 2014 and February 2015 sampling events and at monitoring well 67WW13 during the March and May 2015 sampling events. Monitoring well 67WW01 was also sampled for MNA geochemical parameters during the May 2015 sampling event. Therefore, MNA geochemical parameter data became available for all four impacted wells: 67WW01, 67WW08, 67WW11, and 67WW13. During the 3rd year RA(O), monitoring wells 67WW08 and 67WW11 were sampled for MNA geochemical parameters in November 2015 and monitoring wells 67WW08, 67WW11, and 67WW13 were sampled for MNA geochemical parameters in May 2016.
- The original top and bottom depths/elevations of the screened intervals for monitoring wells 67WW01, 67WW02, and 67WW03 were changed based on the results of a downhole camera survey performed in March 2015 to verify well construction. These

screened intervals are presented in Table 2-1. The changes were minor and do not affect groundwater gauged elevation or gradient.

2.2.2 Groundwater Elevations and Flow Direction

During the November 2015 event, monitoring wells 67WW03 and 67WW04 were dry. The presence of these dry wells did not limit the ability to construct a complete potentiometric surface contour map. Based on the gauging data during this event, the groundwater flow direction is interpreted to be north/northwesterly (**Figure 2-2**).

During the November 2015 event, the groundwater elevation in monitoring well 67WW02 in the central-northern area of the site was anomalously high in comparison to the general pattern of groundwater flow in the vicinity of this well. However, a similar groundwater flow pattern was observed in December 2014. Additionally, the groundwater elevation from monitoring well 67WW01 was not used to contour the potentiometric surface of the shallow zone for November 2015.

During the May 2016 event, monitoring well 67WW04 was noted to be dry similar to November 2015; however, groundwater was present in monitoring well 67WW03. The presence of dry monitoring well 67WW04 did not limit the ability to construct a complete potentiometric contour map. Based on the gauging data during this event, the groundwater flow direction is interpreted to be north/northwesterly (**Figure 2-3**).

The groundwater elevation at monitoring well 67WW02, noted to be high in November 2015, returned to the normal gradient during the May 2016 event. The groundwater elevation from monitoring well 67WW11 was not used to contour the potentiometric surface of the shallow zone for May 2016. Groundwater elevations generally decreased by up to 2 ft across the site between May 2015 and November 2015, but subsequently, between November 2015 and May 2016, rose by up to 2 ft across the site. The observed change in groundwater elevations is likely due to seasonal rain events; however, groundwater data for monitoring well 67WW11 appears to respond more slowly to changing conditions than other site monitoring wells. Therefore, the elevation was inconsistent with the elevations of the surrounding wells.

Based on data collected during the 3rd year of RA(O), the groundwater flow direction was generally to the north/northwest. The interpretation of groundwater flow direction changed slightly from what was presented in the 1st year RA(O) report. This change was most likely due to variations in precipitation and corresponding changes in groundwater elevation. In the first three events of the 1st year RA(O), the groundwater flow direction was interpreted to be predominantly to the north/northeast. The interpretation of groundwater flow direction changed in May 2014 to a north/northwesterly direction and coincided with an increase in groundwater elevation across the site. The groundwater elevations across the site during the 2nd and 3rd year RA(O) remained similar to or higher than the May 2014 groundwater elevations and the interpretation of the predominant groundwater flow direction also remained in a north/northwesterly direction.

The interpreted groundwater flow direction observed during the 2nd and 3rd year RA(O) differs from what was presented in the RD (Shaw, 2011) (see **Figure 2-4**).

2.2.3 Groundwater Analytical Results

Historical analytical results for the 1st, 2nd, and 3rd year RA(O) are presented in **Table 2-2**. Historical COC results are presented in **Table 2-3**. **Figures 2-5 through 2-7** depict the VOC data in wells sampled in November 2015, March 2016 (67WW01 and 67WW03), and May 2016, respectively. As previously noted, only monitoring wells 67WW01 and 67WW03 were sampled during the March 2016 groundwater monitoring event, because they were dry during two or more sampling events in years 1 and 2 of MNA activities. Therefore, an additional set of data was collected in March 2016 to better evaluate groundwater conditions at these wells over the three year RA(O) period.

Over the course of the 3rd year of RA(O), monitoring wells 67WW01, 67WW02 (May 2016 only), 67WW08, 67WW11, 67WW13, 67WW14, and 67WW15, contained VOCs above their respective maximum contaminant levels (MCLs). The highest concentrations of VOCs were detected in wells 67WW01, 67WW08, 67WW13, and 67WW15. The trends of COC concentrations in monitoring wells with COC concentrations greater than the MCL are depicted in graphs presented on **Figure 2-8**. The trend analysis is discussed in **Section 3.0**.

Between December 1998 and May 2016, concentrations of COCs in monitoring well 67WW01 have been above their MCLs as shown on **Table 2-3**. Other monitoring wells such as 67WW02 and 67WW03 also had COC concentrations above their MCLs during the December 1998 monitoring event, but during subsequent monitoring events, COC concentrations decreased below MCLs until the May 2015 monitoring event during which concentrations of 1,1-DCE increased above the MCL in monitoring well 67WW02.

An expanded discussion on the VOCs and their distribution including trends is included **Section 3.1**.

Groundwater monitoring well sampling forms for the November 2015, March 2016, and May 2016 3rd year RA(O) sampling events were completed for each monitoring well sampled and are included in **Appendix C**. Laboratory analytical results are included in **Appendix D**.

2.3 Surface Water Sampling

The shallow zone groundwater flow direction (identified as north/northeast from the 1st year RA(O) report, and north/northwest from the 2nd and 3rd year RA(O) reports) indicates that Central Creek, located south of the LHAAP-67 site, is upgradient from the site and, therefore, surface water sampling for potential impacts from LHAAP-67 is not appropriate. Concurrence was obtained from USEPA and TCEQ to not sample surface water from Central Creek.

As shown in **Figure 1-2**, Goose Prairie Creek is located downstream to the north of LHAAP-67 and is more than 1,500 ft from the site. There is no other surface water body downgradient or in close proximity of LHAAP-67 that is appropriate for surface water sampling. Therefore, based on the change in flow direction from that contained in the RD, TCEQ and USEPA agreed that no surface water monitoring is required for LHAAP-67.

2.4 Groundwater Monitoring System Maintenance and Repairs

In Year 3 of RA(O) at LHAAP-67, groundwater monitoring events took place in November 2015 and May 2016. For two of the wells that were dry during the November 2015 event, another sampling event was performed in March 2016. During these events, the condition of the

monitoring wells was visually assessed and a subset of the wells was photographed during the November 2015 event (see Appendix B). Prior to the first Year 3 sampling event, on August 15, 2015, monitoring well 67WW05 was scraped and power washed. Well 67WW05 was subsequently re-painted on September 1, 2015.

On October 14, the field crew used a bush-hog to remove brush around all of the wells at LHAAP-67 and trimmed back weeds from the well pads. On January 20, 2016, three of the monitoring wells, 67WW06, 67WW10, and 67WW11, were re-developed in accordance with the Installation-Wide Work Plan (AECOM, 2014).

On April 6, 2016, the locations for new wells 67WW15 and 67WW16I were cleared for well installation. Monitoring well 67WW15 was drilled and completed on May 3, 2016. Drilling for monitoring well 67WW16I began on April 28, 2016 and the well was completed on May 3, 2016 (see Appendix G for well logs). Identification labels were attached to the two new wells and they were developed on May 14, 2016 (67WW16I) and May 17, 2016 (67WW15). **Table 2-4** provides a summary of the maintenance and repairs that were performed at the site in RA-O Year 3.

Legend

- LHAAP-67 Site Boundary
- Former Buildings or Concrete Slab
- Land Use Control Boundary
- Roads
- Former Railroad Track Location
- 1,1,2-Trichloroethane Concentration Contour (5 µg/L)
- 1,1-Dichloroethene Concentration Contour (7 µg/L) (Dashed Where Inferred)
- 1,2-Dichloroethane Concentration Contour (5 µg/L)
- Vinyl Chloride (2 µg/L)
- Shallow Monitoring Well
- Current MNA Parameter Analysis Well Location
- Intermediate Monitoring Well (Concentration Not Used for Contouring)
- MCL — Maximum Contaminant Level
- NS — Not Sampled
- <0.5 U — Analyte Below Detection Limits
- 2.67 — Analyte Detected, Result Below Limits
- 67.6 — Analyte Detected, Result Exceeds MCL
- J — Estimated value; analyte concentration was less than the limit of quantification.
- U — Analyte was not detected.

Notes:
1. *All concentrations shown in micrograms per liter (µg/L).*
2. *Monitoring wells 67WW04 and 67WW06 are used for groundwater level gauging only and are not sampled.*

Elevations are reported as above mean sea level (FT MSL)

[a] Screen information calculated from Data Gap Investigation Report (Shaw 2007).

[b] Screen information calculated from well construction detail forms

[c] Well screen top and bottom depths and elevations for monitoring wells 67WW01, 67WW02, and 67WW03 were revised/confirmed with a downhole camera survey performed in March 2015.

[d] Monitoring wells LHAAP-67WW01, 67WW02, and 67WW08 were re-surveyed in September 2016 and elevations in the table for these wells are based on the re-survey results.

[e] Intermediate zone monitoring well.

Dry=Insufficient or no water in well.

TOC=Top of Casing

Blue Highlighting Indicates Analyte Detected Above MCL/PCL.

Some samples may have been diluted due to the concentration(s) of one or more analytes exceeding the upper limit of the calibration curve.

"FD" in Sample ID indicates a field duplicate sample.

CEQ/mL - cells equivalent per milliliter

J - Estimated value; analyte concentration was less than the limit of quantification

MCL - maximum contaminant level

mg/L - milligram per liter

NA - not analyzed

NR – not reportable due to sample being taken from bailer

PCL – Texas Risk Reduction Program (TRRP) Tier 1 Groundwater Residential Protective Concentration Level

U - Analyte was not detected.

µg/L - microgram per liter

UJ - The analysis was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample. 'UJ' not detects are not definite; the analyte may be present.

Blue Highlighting Indicates Analyte Detected Above MCL/PCL.

Some samples may have been diluted due to the concentration(s) of one or more analytes exceeding the upper limit of the calibration curve.

"FD" in Sample ID indicates a field duplicate sample.

CEQ/mL - cells equivalent per milliliter

J - Estimated value; analyte concentration was less than the limit of quantification

MCL - maximum contaminant level

mg/L - milligram per liter

NA - not analyzed

NR – not reportable due to sample being taken from bailer

PCL – Texas Risk Reduction Program (TRRP) Tier 1 Groundwater Residential Protective Concentration Level

U - Analyte was not detected.

µg/L - microgram per liter

UJ - The analysis was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample. 'UJ' not detects are not definite; the analyte may be present.

Blue Highlighting Indicates Analyte Detected Above MCL/PCL.

Some samples may have been diluted due to the concentration(s) of one or more analytes exceeding the upper limit of the calibration curve.

"FD" in Sample ID indicates a field duplicate sample.

CEQ/mL - cells equivalent per milliliter

J - Estimated value; analyte concentration was less than the limit of quantification

MCL - maximum contaminant level

mg/L - milligram per liter

NA - not analyzed

NR – not reportable due to sample being taken from bailer

PCL – Texas Risk Reduction Program (TRRP) Tier 1 Groundwater Residential Protective Concentration Level

U - Analyte was not detected.

µg/L - microgram per liter

UJ - The analysis was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample. 'UJ' not detects are not definite; the analyte may be present.

FERROUS IRON	mg/L		NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA

Blue Highlighting Indicates Analyte Detected Above MCL/PCL.

Some samples may have been diluted due to the concentration(s) of one or more analytes exceeding the upper limit of the calibration curve.

"FD" in Sample ID indicates a field duplicate sample.

CEQ/mL - cells equivalent per milliliter

J - Estimated value; analyte concentration was less than the limit of quantification

MCL - maximum contaminant level

mg/L - milligram per liter

NA - not analyzed

NR – not reportable due to sample being taken from bailer

PCL – Texas Risk Reduction Program (TRRP) Tier 1 Groundwater Residential Protective Concentration Level

U - Analyte was not detected.

µg/L - microgram per liter

UJ - The analysis was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample. 'UJ' not detects are not definite; the analyte may be present.

Blue Highlighting Indicates Analyte Detected Above MCL/PCL.

Some samples may have been diluted due to the concentration(s) of one or more analytes exceeding the upper limit of the calibration curve.

"FD" in Sample ID indicates a field duplicate sample.

CEQ/mL - cells equivalent per milliliter

J - Estimated value; analyte concentration was less than the limit of quantification

MCL - maximum contaminant level

mg/L - milligram per liter

NA - not analyzed

NR – not reportable due to sample being taken from bailer

PCL – Texas Risk Reduction Program (TRRP) Tier 1 Groundwater Residential Protective Concentration Level

U - Analyte was not detected.

µg/L - microgram per liter

UJ - The analysis was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample. 'UJ' not detects are not definite; the analyte may be present.

FERROUS IRON	mg/L		0.944	0.0931	0.0585	NA	NA	NA	NA	NA	NA	NA	NA

Blue Highlighting Indicates Analyte Detected Above MCL/PCL.

Some samples may have been diluted due to the concentration(s) of one or more analytes exceeding the upper limit of the calibration curve.

"FD" in Sample ID indicates a field duplicate sample.

CEQ/mL - cells equivalent per milliliter

J - Estimated value; analyte concentration was less than the limit of quantification

MCL - maximum contaminant level

mg/L - milligram per liter

NA - not analyzed

NR – not reportable due to sample being taken from bailer

PCL – Texas Risk Reduction Program (TRRP) Tier 1 Groundwater Residential Protective Concentration Level

U - Analyte was not detected.

µg/L - microgram per liter

UJ - The analysis was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample. 'UJ' not detects are not definite; the analyte may be present.

Blue Highlighting Indicates Analyte Detected Above MCL/PCL.

Some samples may have been diluted due to the concentration(s) of one or more analytes exceeding the upper limit of the calibration curve.

"FD" in Sample ID indicates a field duplicate sample.

CEQ/mL - cells equivalent per milliliter

J - Estimated value; analyte concentration was less than the limit of quantification

MCL - maximum contaminant level

mg/L - milligram per liter

NA - not analyzed

NR – not reportable due to sample being taken from bailer

PCL – Texas Risk Reduction Program (TRRP) Tier 1 Groundwater Residential Protective Concentration Level

U - Analyte was not detected.

µg/L - microgram per liter

UJ - The analysis was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample. 'UJ' not detects are not definite; the analyte may be present.

FERROUS IRON	mg/L		NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA

Blue Highlighting Indicates Analyte Detected Above MCL/PCL.

Some samples may have been diluted due to the concentration(s) of one or more analytes exceeding the upper limit of the calibration curve.

"FD" in Sample ID indicates a field duplicate sample.

CEQ/mL - cells equivalent per milliliter

J - Estimated value; analyte concentration was less than the limit of quantification

MCL - maximum contaminant level

mg/L - milligram per liter

NA - not analyzed

NR – not reportable due to sample being taken from bailer

PCL – Texas Risk Reduction Program (TRRP) Tier 1 Groundwater Residential Protective Concentration Level

U - Analyte was not detected.

µg/L - microgram per liter

UJ - The analysis was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample. 'UJ' not detects are not definite; the analyte may be present.

FERROUS IRON	mg/L		NA	NA	NA	NA	NA	NA	<0.04 U	NA	NA	<0.04 U	<0.04 U

Blue Highlighting Indicates Analyte Detected Above MCL/PCL.

Some samples may have been diluted due to the concentration(s) of one or more analytes exceeding the upper limit of the calibration curve.

"FD" in Sample ID indicates a field duplicate sample.

CEQ/mL - cells equivalent per milliliter

J - Estimated value; analyte concentration was less than the limit of quantification

MCL - maximum contaminant level

mg/L - milligram per liter

NA - not analyzed

NR – not reportable due to sample being taken from bailer

PCL – Texas Risk Reduction Program (TRRP) Tier 1 Groundwater Residential Protective Concentration Level

U - Analyte was not detected.

µg/L - microgram per liter

UJ - The analysis was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample. 'UJ' not detects are not definite; the analyte may be present.

Blue Highlighting Indicates Analyte Detected Above MCL/PCL.

Some samples may have been diluted due to the concentration(s) of one or more analytes exceeding the upper limit of the calibration curve.

"FD" in Sample ID indicates a field duplicate sample.

CEQ/mL - cells equivalent per milliliter

J - Estimated value; analyte concentration was less than the limit of quantification

MCL - maximum contaminant level

mg/L - milligram per liter

NA - not analyzed

NR – not reportable due to sample being taken from bailer

PCL – Texas Risk Reduction Program (TRRP) Tier 1 Groundwater Residential Protective Concentration Level

U - Analyte was not detected.

µg/L - microgram per liter

UJ - The analysis was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample. 'UJ' not detects are not definite; the analyte may be present.

FERROUS IRON	mg/L		NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA

Blue Highlighting Indicates Analyte Detected Above MCL/PCL.

Some samples may have been diluted due to the concentration(s) of one or more analytes exceeding the upper limit of the calibration curve.

"FD" in Sample ID indicates a field duplicate sample.

CEQ/mL - cells equivalent per milliliter

J - Estimated value; analyte concentration was less than the limit of quantification

MCL - maximum contaminant level

mg/L - milligram per liter

NA - not analyzed

NR – not reportable due to sample being taken from bailer

PCL – Texas Risk Reduction Program (TRRP) Tier 1 Groundwater Residential Protective Concentration Level

U - Analyte was not detected.

µg/L - microgram per liter

UJ - The analysis was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample. 'UJ' not detects are not definite; the analyte may be present.

Blue Highlighting Indicates Analyte Detected Above MCL/PCL.

Some samples may have been diluted due to the concentration(s) of one or more analytes exceeding the upper limit of the calibration curve.

"FD" in Sample ID indicates a field duplicate sample.

CEQ/mL - cells equivalent per milliliter

J - Estimated value; analyte concentration was less than the limit of quantification

MCL - maximum contaminant level

mg/L - milligram per liter

NA - not analyzed

NR – not reportable due to sample being taken from bailer

PCL – Texas Risk Reduction Program (TRRP) Tier 1 Groundwater Residential Protective Concentration Level

U - Analyte was not detected.

µg/L - microgram per liter

UJ - The analysis was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample. 'UJ' not detects are not definite; the analyte may be present.

Ferrous Iron (SM3500FE)													
FERROUS IRON	mg/L		NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA

Blue Highlighting Indicates Analyte Detected Above MCL/PCL.

Some samples may have been diluted due to the concentration(s) of one or more analytes exceeding the upper limit of the calibration curve.

"FD" in Sample ID indicates a field duplicate sample.

CEQ/mL - cells equivalent per milliliter

J - Estimated value; analyte concentration was less than the limit of quantification

MCL - maximum contaminant level

mg/L - milligram per liter

NA - not analyzed

NR – not reportable due to sample being taken from bailer

PCL – Texas Risk Reduction Program (TRRP) Tier 1 Groundwater Residential Protective Concentration Level

U - Analyte was not detected.

µg/L - microgram per liter

UJ - The analysis was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample. 'UJ' not detects are not definite; the analyte may be present.

3 NATURAL ATTENUTION EVALUTION

The following sections present the results of the natural attenuation evaluation in accordance with the three lines of evidence discussed in the Final RD (Shaw, 2011) for site COCs.

3.1 First Line of Evidence: Change in COC Concentrations over Time and with Distance

Natural attenuation is the combination of multiple mechanisms, including biodegradation, volatilization, dilution, advection, and absorption that reduce contaminant concentrations. The decrease of COC concentrations over time and distance is evidence of natural attenuation. The change in groundwater COC concentrations over time and with distance was evaluated at LHAAP-67. COC concentrations for the November 2015, March 2016, and May 2016 sampling events are provided on **Figures 2-6 through 2-8** as well as **Tables 2-2 and 2-3**. COCs exceeding their respective MCLs are highlighted.

During the 3rd year RA(O) monitoring period, the following monitoring wells contained COCs above their respective MCLs: 67WW01, 67WW02, 67WW08, 67WW11, 67WW13, 67WW14, and 67WW15. Groundwater samples from the other wells in the monitoring program did not contain COCs above the MCL in any of the three sampling events. Based on the general direction of groundwater flow, monitoring wells 67WW04, 67WW09A, and 67WW10 are considered upgradient background monitoring wells and monitoring wells 67WW12, 67WW02, and 67WW05 can be considered downgradient monitoring wells. In-plume monitoring wells include 67WW01, 67WW08, 67WW09, 67WW11, 67WW13, 67WW15, and 67WW16. Monitoring wells 67WW07 and 67WW14 are considered cross-gradient wells. The following discussion is focused on VOC trends observed in the seven monitoring wells with COC concentrations above the MCL: 67WW01, 67WW02, 67WW08, 67WW11, 67WW13, 67WW14, and 67WW15.

Mann-Kendall analysis for the data collected during the 3rd year RA(O) monitoring period was completed for 1,1-DCE, 1,2-DCA, and TCE. The results are presented in **Appendix E** in graphical format with statistical results presented on the right hand side. The USEPA's ProUCL version 5.1 was used for this analysis. As required by the program, the dates are displayed in numerical format rather than in a date format. The concentrations of COCs are presented in micrograms per liter (µg/L). Half the reporting limit was used for non-detects. For duplicate samples, the average concentration in the normal sample and its duplicate was used. The level of significance is 5 percent (%). A summary table of the Mann-Kendall results is as follows:

Mann-Kendall Trend Summary

Monitoring Well	1,1-DCE	1,2-DCA	TCE
67WW01	**Significant Increase**	**Significant Increase**	No significant trend
67WW02	No significant trend	No significant trend	No significant trend
67WW08	No significant trend	No significant trend	No significant trend
67WW09	**Significant Decrease**	**Significant Decrease**	No significant trend
67WW11	**Significant Decrease**	**Significant Decrease**	No significant trend
67WW13	No significant trend	**Significant Increase**	No significant trend

Historical COC results for all wells are present in **Table 2-3**.

Significant Increases

Mann-Kendall analysis identified statistically significant evidence of increasing trends for the following:

- Monitoring well 67WW01 – 1,1-DCE and 1,2-DCA. 1,1,1-TCA and 1,1,2-TCA were detected above the MCL at 67WW01 in 1998; however, these constituents have remained below the MCL since that sampling event. As the degradation of 1,1,1-TCA and 1,1,2-TCA occurs, an increase in concentrations of their degradation daughter products 1,1-DCE and 1,2-DCA is anticipated. In addition to degradation of 1,1,1-TCA and 1,1,2-TCA, the increase in 1,1-DCE and 1,2-DCA at monitoring well 67WW01 may be due to downgradient flow of high concentrations of these COCs in upgradient groundwater in the vicinity of well 67WW08.
- Monitoring well 67WW13 – 1,2-DCA. Over the three year RA(O) period, 1,2-DCA concentrations at 67WW13 have increased over time and correlate with an increase in 1,1,2-TCA concentrations observed at this well. The increase in concentrations may be due to transport of these constituents observed in upgradient groundwater at monitoring well 67WW01 dating back to 1998.

Although no significant trends were identified for monitoring well 67WW02, 1,1-DCE concentrations at this well were observed to be higher than typical in May 2016. Historically, 1,1-DCE was not detected above the reporting limit (<1 µg/L) until February 2015. The initial detection in February 2015 of 3.59 µg/L was below the MCL; however, in May 2015, 1,1-DCE was detected above the MCL with a concentration of 13.2 µg/L. In November 2015, the 1,1-DCE concentration (0.857 J µg/L) decreased to below the MCL and then increased above the MCL once again with a concentration of 67.6 µg/L in May 2016. The concentration detected in May 2016 is the highest concentration of 1,1-DCE detected at this monitoring well to date.

In addition to the higher than typical 1,1-DCE concentration detected at monitoring well 67WW02, initial MCL exceedances were identified at monitoring well 67WW14 during the 3rd year RA(O) sampling events in November 2015 (1,1,-DCE and 1,2-DCA) and May 2016 (1,1-

DCE); however, Mann-Kendall analysis was not performed for 67WW14 since these are first time MCL exceedances. As previously noted, monitoring well 67WW14 is a cross-gradient well located in the southwest quadrant. Groundwater has been sampled at 67WW14 for three years and indicates that 1,1-DCE and 1,2-DCA are the only COCs detected above the reporting limit. Although considered to be cross-gradient, groundwater in the vicinity of monitoring well 67WW14 may be influenced by groundwater from the northeast, near new monitoring well 67WW15, which had much higher concentrations of 1,1,-DCE and 1,2,-DCA during the May 2016 sampling event. Monitoring well 67WW15 was installed in May 2016 and only has one round of sample data. Both monitoring wells 67WW15 and 67WW14 will continue to be sampled to evaluate trends and the potential for monitoring well 67WW14 to be impacted by cross-gradient groundwater.

Mann-Kendall analysis was not performed on monitoring well 67WW15 since this well was installed in May 2016 and only one round of groundwater sampling has been performed to date; however, concentrations of 1,1,2-TCA, 1,1-DCE, 1,2-DCA, and TCE exceeded the MCL and COC concentrations at this new well are higher than current concentrations at all other site wells.

Significant Decreases

Mann-Kendall analysis identified statistically significant evidence of decreasing trends for the following:

- Monitoring well 67WW09 – 1,1-DCE and 1,2-DCA. These decreasing trends may be the result of natural attenuation (e.g., dilution from clean upgradient groundwater observed in 67WW09A). Monitoring well 67WW09A was installed south-southeast of monitoring well 67WW09 to bound the plume to the south and in the upgradient direction. VOC results in monitoring well 67WW09A have remained below the MCLs. Results from future sampling events will continue to be evaluated for COC concentration trends.
- Monitoring well 67WW11 – 1,1-DCE and 1,2-DCA. Similar to the decreasing trends observed for these constituents in monitoring well 67WW09, the decreasing trends observed in monitoring well 67WW11 may be the result of natural attenuation (e.g., dilution from clean upgradient groundwater observed in 67WW09A). Results from future sampling events will continue to be evaluated for COC concentration trends.

3.1.1 Plume Stability

COC plume maps completed for each sampling event are presented in **Figures 2-5 and 2-7** (plume contours were not drawn on **Figure 2-6** since only two monitoring wells were sampled in March 2016). The COC data from the 3rd year RA(O) monitoring period, combined with the COC data from the previous 2nd year RA(O) monitoring period indicated seasonal plume migration to the north/northwest and a shift in the plume to the west (specifically noting first time MCL exceedances in the 3rd year RA(O) monitoring period for 1,1-DCE and 1,2-DCA at monitoring well 67WW14 located in the southwestern quadrant), compared to previous periods. This shift is consistent with the groundwater flow direction to the north/northwest. Based on the general direction of groundwater flow, the following wells are considered to be along the groundwater flow path: 67WW01, 67WW02, 67WW05, 67WW08, 67WW10, 67WW11, 67WW13, 67WW14, and 67WW15.

The COCs in upgradient monitoring well 67WW10, installed in 2013, have remained below the MCLs throughout the 3 year monitoring period. In-plume monitoring well 67WW11, which is the farthest upgradient in-plume monitoring well, exhibited a significant decreasing trend for 1,1-DCE and 1,2-DCA, which may be due to natural attenuation associated with a dilution effect from clean groundwater flowing downgradient from upgradient areas. New in-plume monitoring well 67WW15 (installed in May 2016) exhibits the highest levels of COCs observed to date. Prior to the installation of monitoring well 67WW15, the highest COC concentrations were consistently observed at monitoring well 67WW08. The screen intervals on both of these wells are deeper than the screen intervals of the other Shallow Zone monitoring wells at the site. The May 2016 COC results could indicate a shift in the center of the plume to the west; however, with only one sample from monitoring well 67WW15, it is too early to draw that conclusion.

Monitoring well 67WW05, downgradient of monitoring well 67WW15, was non-detect for the site COCs; therefore, monitoring well 67WW05 defines the downgradient extent of COCs at 67WW15. Monitoring well 67WW01 is typically considered a downgradient well for monitoring well 67WW08. COC concentrations at monitoring well 67WW01 are lower for 1,1,2-TCA, 1,1-DCE, and 1,2-DCA than in monitoring well 67WW08, which is expected with increase distance from the center of the plume. Concentrations of 1,1-DCE and 1,2-DCA at monitoring well 67WW01 exhibit a statistically significant increase over the three year RA(O) period which may be related to transport of COCs from the upgradient area in the vicinity of monitoring well 67WW08. Vinyl chloride concentrations at 67WW01 continue to exceed the MCL of 2 µg/L with concentrations of 2.38 J µg/L (November 2015), 3.64 µg/L (March 2016), and 2.98 J µg/L (May 2016) during the 3rd year RA(O) monitoring period.

Monitoring well 67WW13, located downgradient from monitoring well 67WW01, exhibited a statistically significant increase for 1,2-DCA during the three year RA(O) period. However, 1,1-DCE concentrations decreased substantially between the November 2015 (762 µg/L) and May 2016 (272 µg/L) sampling events. Additionally, vinyl chloride concentrations at 67WW13 have remained less than the MCL since May 2014. Similar to monitoring well 67WW15, monitoring well 67WW13 remains bounded by downgradient monitoring well 67WW05, where COCs have not been detected above MCLs.

At boundary well 67WW02, 1,1-DCE, which was initially not detected above the reporting limit since 1998, began having reportable detections in February 2015 (3.59 µg/L), and then increased to concentrations above the MCL in May 2015 (13.0 µg/L) and May 2016 (67.6 µg/L). However, the 1,1-DCE concentration in November 2015 (0.857 J µg/L), at which time 67WW02 was located on a potentiometric surface high, did not exceed the MCL. This may represent a plume shift towards monitoring well 67WW02 when groundwater flow is directed towards monitoring well 67WW02 from in-plume monitoring wells 67WW01 and 67WW08. Future sampling events will continue to evaluate plume migration towards monitoring well 67WW02.

Monitoring wells 67WW03 and 67WW12 are considered downgradient from the area of monitoring wells 67WW06 and 67WW07. The downgradient monitoring well 67WW03 (located in close proximity to 67WW12) was dry in the first of the three sampling events during the 3rd year RA(O) monitoring period. In the second event (March 2016) and third event (May 2016), this well had no detections of COCs. Prior to March 2016, the well also had no detections of COCs in 2004 and 2006. The high concentrations of 1,1,1-TCA, 1,1,2-TCA, and 1,1-DCE reported in this well in December 1998 appeared to have attenuated before September 2004 and

remain below detection. Similarly, COCs at monitoring well 67WW12, installed to replace the dry monitoring well 67WW03, have not been detected above the reporting limit, except for 1,1-DCE which was detected just slightly above the reporting limit with an estimated ("J" flagged) value of 0.681 J µg/L in May 2016. This concentration is well below the MCL of 7 µg/L established for 1,1-DCE.

No increasing COC concentrations or new detections were observed at perimeter wells 67WW05, 67WW07, 67WW09A, and 67WW10 over the three year RA(O) period. These monitoring wells continue to delineate the plume below MCLs to northwest (67WW05), south (67WW09A), southeast (67WW10), and east (67WW07).

As detailed above, a plume shift may be occurring at both perimeter wells 67WW14 (southwest) and 67WW02 (north) and will continue to be evaluated during future sampling events. If 67WW02 COC concentrations remain above the MCL, a new downgradient monitoring well outside the MCL boundary would be needed in the future to provide a downgradient compliance well/sentry point. Also, an additional well downgradient of 67WW13, 67WW14, and 67WW15 (between 67WW05 and 67WW15) may be necessary to monitor plume migration and attenuation. If the plume continues to also shift west, as demonstrated by increased concentrations at 67WW14, installation of a monitoring well west of 67WW14 may be needed to confirm the plume is not migrating beyond the monitoring well network at levels exceeding MCLs.

A review of the data in individual wells over the course of the monitoring period does not indicate any definitive correlation between groundwater elevations and COC concentrations as depicted in **Figure 2-8**.

3.2 Second Line of Evidence: Geochemical Indicators

Table 2-2 presents geochemical indicators that are useful MNA evaluation parameters. Some geochemical indicators are collected in the field and are recorded for all sampling events for all wells. The field parameters for LHAAP-67 wells include: dissolved oxygen (DO), oxidation-reduction potential (ORP), pH, conductivity, turbidity, ferrous iron, and temperature. DO measurements collected from bailed wells were not included in **Table 2-2** in accordance with the revised IWWP (AECOM, 2014).

DO

DO is the most thermodynamically favored electron acceptor used by microbes for biodegradation of organic carbon, whether natural or anthropogenic (USEPA, 1998). Anaerobic bacteria generally cannot function at DO concentrations greater than about 0.5 milligrams per liter (mg/L) and hence, reductive dechlorination will not occur.

Monitoring wells 67WW01, 67WW02, 67WW03, 67WW05, and 67WW07, all very shallow wells, were sampled by bailing, so the DO concentrations in these wells are not included in **Table 2-2** in accordance with the revised IWWP (AECOM, 2014).

In monitoring wells 67WW08, 67WW13, and 67WW15, where COC concentrations are greater than the MCL, the DO concentrations ranged from 0 mg/L (67WW08, multiple events) to 2.03 mg/L (67WW13, May 2014). Specifically during the 3rd year RA(O) monitoring period, DO measurements in monitoring wells 67WW08 and 67WW13 were 0.44 mg/L and 0.28 mg/L,

respectively in November 2015, and 0.82 mg/L and 0.55 mg/L, respectively in May 2016. The DO measurement collected at new monitoring well 67WW15 in May 26 was 1.5 mg/L.

The low DO levels (<0.5 mg/L) measured in both monitoring wells 67WW08 and 67WW13 are noted to be beneficial for reductive chlorination; however, DO measurements for all three monitoring wells in May 2016 are observed to be greater than 0.5 mg/L.

ORP

The ORP levels indicate how oxidative or reductive the groundwater is in the aquifer matrix and provide real-time data to determine if conditions are conducive for anaerobic biodegradation. ORP values less than 50 milli-volts (mV) indicate that the aquifer is reaching anaerobic conditions and are favorable for the biological reductive dechlorination of chlorinated ethenes and ethanes.

The ORP measurements at LHAAP-67 during the 2014/2015 monitoring period had generally been negative in the most highly contaminated well (67WW08) ranging between -16 mV (May 2015) to 45 mV (February 2015). However, during the 3rd year RA(O) monitoring period, the ORP measurements have generally been positive in all of the wells. Specifically in monitoring wells 67WW08, 67WW13, and 67WW15, all ORP values have been greater than 50 mV, ranging from 113 mV (67WW08, November 2015) to 244 (67WW13, May 2016). These measurements indicate a higher level of oxidative conditions, not supporting reductive dechlorination and could, at least in part, reflect the influence of rising groundwater levels.

Nitrite

After DO has been depleted in the microbiological treatment zone, nitrate may be used as an electron acceptor for anaerobic biodegradation of organic carbon via denitrification. In order for reductive dechlorination to occur, nitrate concentrations in the contaminated portion of the aquifer must be less than 1.0 mg/L (USEPA, 1998).

Nitrate was sampled in monitoring wells 67WW08 and 67WW11 in November 2015 and May 2016 and in monitoring well 67WW13 in May 2016. The nitrate concentrations were not detected at the limit of detection (LOD) of 2 mg/L in any of the samples. Therefore, nitrate reduction is likely not a mode of microbial respiration at the site, and the lack of nitrate is favorable for achieving the highly reducing conditions ideal for anaerobic reductive dechlorination.

Iron Reduction

In some cases, iron (III) (ferric iron) is used as an electron acceptor during anaerobic biodegradation of organic carbon. During this process, iron (III) is reduced to iron (II) (ferrous iron), which may be soluble in water. Ferrous iron concentrations can therefore be used as an indicator of anaerobic degradation of fuel compounds.

Ferrous iron concentrations were measured in monitoring wells 67WW08 and 67WW11 in November 2015 and May 2016 and in monitoring well 67WW13 in May 2016. Ferrous iron was not detected (<0.04 mg/L) in monitoring wells 67WW11 and 67WW13; however, it was detected in monitoring well 67WW08 with concentrations of 0.0931 mg/L and 0.0585 mg/L, respectively. Based on these results, current ferrous iron concentrations indicate that limited reductive dechlorination is occurring.

Sulfate

After DO and nitrate have been depleted in the microbiological treatment zone, sulfate may be used as an electron acceptor for anaerobic biodegradation. This process is termed "sulfate reduction" and results in the production of sulfide. Concentrations of sulfate greater than 20 mg/L may cause competitive exclusion of dechlorination. However, in many plumes with high concentrations of sulfate, reductive dechlorination still occurs (USEPA, 1998).

Sulfate was sampled in monitoring wells 67WW08 and 67WW11 in November 2015 and May 2016 and in monitoring well 67WW13 in May 2016. Sulfate concentrations ranged from 300 mg/L (67WW08, November 2015) to 409 mg/L (67WW11, May 2016). Relatively high concentrations of sulfate and corresponding sulfide concentrations below the laboratory reporting limit of 1 mg/L indicate that the conditions in the aquifer are not conducive for sulfate reduction.

Methane

Methanogenesis occurs in highly reducing conditions and generally occurs after oxygen, nitrate, and sulfate have been depleted. Methane levels above 500 µg/L are considered indicative of methanogenic conditions (USEPA, 1998).

Methane was sampled in monitoring wells 67WW08 and 67WW11 in November 2015 and May 2016 and in monitoring well 67WW13 in May 2016. Methane concentrations were all less than 20 µg/L, ranging from non-detect (<2 µg/L) (67WW11 and 67WW13, May 2016) to 12.1 µg/L (67WW08, November 2015). Based on these results, methanogenic conditions are not occurring in groundwater.

Total Organic Carbon

Regardless of the electron acceptor being used, organic carbon is a required source of reduced carbon and energy to sustain microbial activity. Total organic carbon (TOC) is utilized as a carbon and energy source to support the reductive dechlorination of the chlorinated COCs. TOC concentrations greater than 20 mg/L are considered adequate to support microbial activity (USEPA, 1998).

TOC was analyzed in monitoring wells 67WW08 and 67WW11 in November 2015 and May 2016, and in monitoring well 67WW13 in May 2016. TOC was above 20 mg/L, ranging from 22.1 mg/L (67WW11, May 2016) to 93.3 mg/L (67WW13, May 2016). Based on these results, TOC may be assisting reductive dechlorination.

pH

The pH of groundwater has an effect on the presence and activity of microbial populations in groundwater. This is especially true for bacteria responsible for reductive dechlorination. Microbes capable of degrading chlorinated aliphatic hydrocarbons and petroleum hydrocarbon compounds generally prefer pH values from 6 to 8 standard units (USEPA, 1998). The shallow zone groundwater pH within the plume (67WW01, 67WW08, 67WW11, 67WW13, and 67WW15) during the three year RA(O) period ranged from 5.38 standard units (SU) (67WW13, May 2016) to 6.69 SU (67WW13, November 2015), with a pH geomean value of 5.90 SU among these wells, using pH values collected in November 2015, March 2016 (67WW01 only), and May 2016. The conditions in these wells are marginal for dechlorinating bacteria.

Ethane

Ethane and ethene, the two end products of the reductive dechlorination pathways for chlorinated ethanes and ethenes, were below the laboratory reporting limit (<2 µg/L) in monitoring wells analyzed for MNA parameters in November 2015 (67WW08 and 67WW11) and May 2016 (67WW08, 67WW11, and 67WW13). This indicates that complete dechlorination is not taking place.

MNA Parameter Summary

The qualitative assessment of geochemical indicators during the three year RA(O) period in the shallow groundwater zone at LHAAP-67 indicates current geochemical conditions are not optimal for MNA. Nonetheless, certain parameters observed in a few locations may indicate that conditions could favor natural attenuation, such as the low DO concentrations observed in November 2015. The presence of dissolved iron in 67WW08 also provides evidence that limited reducing anaerobic conditions are present. Although degradation products (1,2-DCA and 1,1-DCE) have been detected in the plume monitoring wells, adequate conditions within the impacted area currently do not exist to sustain complete reductive dechlorination.

3.3 Third Line of Evidence: Predictive Modeling and Microbial Analysis

If the first two lines of evidence for MNA are deemed inadequate or inconclusive, and/or if the need for a contingency remedy is evaluated, data from field or microcosm studies will be necessary to establish the third line of evidence for MNA.

Dechlorinating bacteria, dehalococcoides ethenogenes and its associated functional genes, were analyzed at in-plume wells 67WW08 and 67WW11 in November 2015. Generally, the microbial population count and the functional gene counts were very low (less than 100 cells equivalent per milliliter [CEQ/mL]) and in most cases below the laboratory reporting limits, indicating limited population count of the bacteria and absence of gene expression necessary for anaerobic biological degradation of the COCs. Dehalococcoides ethenogenes were measured to be 9.3 CEQ/mL and 13.7 CEQ/mL for wells 67WW08 and 67WW11, respectively. All of the functional reductase genes were non-detect (<0.5 CEQ/mL) in both wells.

As previously noted in Section 3.1, of the analyzed parameters and wells using Mann-Kendall analysis, the following data sets showed a statistically significant decrease in concentration over time:

- 67WW09 – 1,1-DCE and 1,2-DCA; and
- 67WW11 – 1,1-DCE and 1,2-DCA;

During the 3rd year RA(O) November 2015 and May 2016 semiannual sampling events, all COCs with a statistically significant decreasing trend were detected at concentrations below MCLs, except for 1,1-DCE at 67WW11, which remains above the MCL.

For 1,1-DCE in 67WW11, the first order rate constant was estimated at 0.3 yr^{-1} and the time to achieve the MCL of 7 µg/L is estimated at 3.4 years. Degradation of COCs in other wells is not occurring to allow a determination of time to achieve the MCL (i.e., predictive modeling by assuming some degree of degradation and degradation half-lives is not meaningful for this plume). First order rate constant calculations are provided in **Appendix F**.

4 SUMMARY AND CONCLUSIONS

The LUC for LHAAP-67 is groundwater restriction, which prohibits water well installation for any purpose other than environmental monitoring and testing; and residential groundwater use within the LUC boundary until the levels of COCs in groundwater and soil allow unrestricted use and unlimited exposure. The annual LUC compliance inspection for the Year 3 RA(O) was conducted on August 1, 2016. No non-compliance issues or concerns were identified during the annual inspection and site monitoring wells were in good condition. No change in land use or groundwater use has occurred at the site during the entire 3-year RA(O) monitoring period.

No damage to bollards, pads, or protective casings requiring repairs or replacement was observed during annual inspection for Year 3 of RA(O) and wells were deemed to be in good condition. Minimal encroachment of weeds and/or brush on the well pads was observed. Mowing and brush clearing around the well pads was conducted as needed to maintain access to the wells.

VOC data and geochemical indicators were collected over the course of the monitoring period at LHAAP-67 to evaluate effectiveness of MNA as a site remedy. A tiered approach assessing the first two of three lines of evidence was used to evaluate the occurrence of natural attenuation in site groundwater. The first line of evidence evaluated reductions in COC concentrations over time and with distance, the second line of evidence evaluated geochemical indicators, while the third line of evidence evaluated microbial conditions in the aquifer and assessed the time to achieve the MCL for wells that showed significant decreases in COC concentration using the Mann-Kendall test for trends. The results of the tiered evaluation and the conclusions are summarized below.

An assessment of the first line of evidence indicated seasonal plume migration to the north/northwest towards monitoring well 67WW02, having initial MCL exceedances for 1,1-DCE in May 2015 and May 2016 (but no MCL exceedances in November 2015). The assessment also suggested a shift in the plume to the west (specifically noting first time MCL exceedances in year 3 for 1,1-DCE and 1,2-DCA at monitoring well 67WW14, located in the southwestern quadrant), compared to previous periods. This shift is in line with an observed change in groundwater flow direction to the north/northwest. Based on RA(O) Year 3 groundwater level measurements, the groundwater flow direction at LHAAP-67 was generally to the north/northwest. In RA(O) Year 1, the groundwater flow direction was interpreted to be mainly to the north/northeast. Groundwater elevations generally increased across the site in Year 2 and Year 3 as a result of increased precipitation, and the change in groundwater flow direction from Year 1 to Years 2 and 3 of RA(O) may be attributable to the changes (increases) in groundwater elevations. Future sampling events will continue to evaluate plume stability or expansion.

In-plume well 67WW15, recently installed in May 2016, exhibited the highest levels of COCs during the 3rd year RA(O) monitoring period; however, since installation, only one round of groundwater sampling has been performed. Prior to the installation of monitoring well 67WW15, the highest COC concentrations were consistently observed at monitoring well 67WW08. It is noteworthy that 67WW08 is screened across a depth interval similar to that of 67WW15, both being deeper than the other monitoring wells at LHAAP-67. COC concentrations at monitoring well 67WW08 generally remained stable during the 3rd year RA(O)

monitoring period. No statistically significant increasing or decreasing trends were identified for this monitoring well.

Statistically significant increases were identified for 1,1-DCE and 1,2-DCA at monitoring well 67WW01, and 1,2-DCA at monitoring well 67WW13. Both wells are located downgradient of monitoring well 67WW08 and the increases may be due to the migration of concentrations of these COCs in groundwater from the vicinity of monitoring well 67WW08. Additionally, increases in 1,1-DCE and 1,2-DCA at monitoring well 67WW01 may be due to the degradation of 1,1,1-TCA and 1,1,2-TCA observed at this well since 1998.

Statistically significant decreases were identified for 1,1-DCE and 1,2-DCA at both monitoring wells 67WW09 and 67WW11 located on the south side of the plume. The decreasing trends observed at monitoring wells 67WW09 and 67WW11 may be the result of natural attenuation (e.g., dilution from clean upgradient groundwater).

Future sampling events will continue to evaluate trends in COC concentrations as part of the first line of evidence assessment. If 67WW02 COC concentrations remain above the MCL, a new downgradient monitoring well outside the MCL boundary would be needed in the future to provide a downgradient compliance well/sentry point. Also, an additional well downgradient of 67WW13, 67WW14, and 67WW15 (between 67WW05 and 67WW15) may be necessary to monitor plume migration and attenuation. If the plume continues to also shift west, as demonstrated by increased concentrations at 67WW14, installation of a monitoring well west of 67WW14 may be needed to confirm the plume is not migrating beyond the monitoring well network at levels exceeding MCLs.

The qualitative assessment of geochemical indicators performed as the second line of evidence, and the absence of dechlorinating bacteria in the shallow groundwater zone at LHAAP-67 indicate current geochemical conditions are not optimal for MNA. Although, degradation products (1,2-DCA and 1,1-DCE) have been detected in the plume monitoring wells, adequate conditions within the impacted area currently do not exist to sustain complete reductive dechlorination.

An assessment of the third line of evidence was performed on 1,1-DCE at monitoring well 67WW11, as this is the only monitoring well and COC detected above the MCL with a statistically significant decreasing trend in concentrations in the 3rd year RA(O). The first order rate constant was estimated at 0.3 yr^{-1}. From this information, the time to achieve the MCL in this well was estimated at 3.4 years. The primary mechanism for the decrease in concentration in monitoring well 67WW11 is dilution.

After completion of the 3-year RA(O) monitoring period, groundwater monitoring on a semiannual basis will continue to be performed at LHAAP-67 in compliance with the RAWP (AECOM, 2013).

APPENDIX A: ANNUAL LUC COMPLIANCE CERTIFICATION DOCUMENTATION

Annual Land Use Control Compliance Certification Documentation

In accordance with the Remedial Design dated September 2011 for LHAAP-67 a certification of site was conducted by AECOM Technical Services, Inc. on 8/1/16.

A summary of land use control mechanism is as follows:

- Groundwater restriction – restriction of the use of groundwater to environmental monitoring and testing until cleanup levels are met.

A summary of compliance with land use and restriction covenants is as follows:

- No use of groundwater, installation of new groundwater wells, or tampering with existing wells at LHAAP-67.

I, the undersigned, do document that the certification was performed as indicated above, and that the above information is true and correct to the best of my knowledge, information, and belief

Date: 8/1/16

APPENDIX D: LABORATORY ANALYTICAL RESULTS

Microbac

Laboratory Report Number: L15111211

Kayla Teague
AECOM Technical Services, Inc.
16000 Dallas Parkway
Dallas, TX 75248

Please find enclosed the analytical results for the samples you submitted to Microbac Laboratories. Review and compilation of your report was completed by Microbac's Ohio Valley Division (OVD). If you have any questions, comments, or require further assistance regarding this report, please contact your service representative listed below.

Laboratory Contact:
Stephanie Mossburg – Team Chemist/Data Specialist
(740) 373-4071
Stephanie.Mossburg@microbac.com

I certify that all test results meet all of the requirements of the DoD QSM and other applicable contract terms and conditions. Any exceptions are attached to this cover page or addressed in the method narratives presented in the report. All results for soil samples are reported on a 'dry-weight' basis unless specified otherwise. Analytical results for water and wastes are reported on a 'as received' basis unless specified otherwise. A statement of uncertainty for each analysis is available upon request. This laboratory report shall not be reproduced, except in full, without the written approval of Microbac Laboratories, DoD ELAP certification number 2936.01. The reported results are related only to the samples analyzed as received.

This report was certified on December 08 2015

David L. Vandenberg

Record of Sample Receipt and Inspection

Comments/Discrepancies

This is the record of the shipment conditions and the inspection records for the samples received and reported as a sample delivery group (SDG). All of the samples were inspected and observed to conform to our receipt policies, except as noted below.

There were no discrepancies.

Discrepancy	Resolution

Coolers

Cooler #	Temperature Gun	Temperature	COC #	Airbill #	Temp Required?
0019985	H	5.0		J4599413288	X

Inspection Checklist

#	Question	Result
1	Were shipping coolers sealed?	Yes
2	Were custody seals intact?	Yes
3	Were cooler temperatures in range of 0-6?	Yes
4	Was ice present?	Yes
5	Were COC's received/information complete/signed and dated?	Yes
6	Were sample containers intact and match COC?	Yes
7	Were sample labels intact and match COC?	Yes
8	Were the correct containers and volumes received?	Yes
9	Were samples received within EPA hold times?	Yes
10	Were correct preservatives used? (water only)	Yes
11	Were pH ranges acceptable? (voa's excluded)	Yes
12	Were VOA samples free of headspace (less than 6mm)?	Yes

Description	Yes	No	NA	NR	ER#
Chain-of-custody (C-O-C)					
Did samples meet the laboratory's standard conditions of sample acceptability upon receipt?	X				
Were all departures from standard conditions described in an exception report?	X				
Sample and quality control (QC) identification	X				
Are all field sample ID numbers cross-referenced to the laboratory ID numbers?	X				
Are all laboratory ID numbers cross-referenced to the corresponding QC data?	X				
Test reports					
Were all samples prepared and analyzed within holding times?	X				
Other than those results < MQL, were all other raw values bracketed by calibration standards?	X				
Were calculations checked by a peer or supervisor?	X				
Were all analyte identifications checked by a peer or supervisor?	X				
Were sample detection limits reported for all analytes not detected?	X				
Were all results for soil and sediment samples reported on a dry weight basis?	X				
Were % moisture (or solids) reported for all soil and sediment samples?	X				
Were bulk soils/solids samples for volatile analysis extracted with methanol per SW846 Method 5035?			X		
If required for the project, are TICs reported?			X		
Surrogate recovery data					
Were surrogates added prior to extraction?	X				
Were surrogate percent recoveries in all samples within the laboratory QC limits?	X				
Test reports/summary forms for blank samples	X				
Were appropriate type(s) of blanks analyzed?	X				
Were blanks analyzed at the appropriate frequency?	X				
Were method blanks taken through the entire analytical process, including preparation and, if applicable, cleanup procedures?	X				
Were blank concentrations < MQL?	X				
Laboratory control samples (LCS):					
Were all COCs included in the LCS?	X				

Microbac

Texas Risk Reduction Program (TRRP) Checklist

Laboratory Name:	Microbac OVD	**Laboratory Log Number:**	L15111211
Project Name:		**Method:**	8260
Prep Batch Number(s):	548399, 547961	**Reviewer Name:**	Franci Bolden
LRC Date:	2015-12-08 00:00:00		

Was each LCS taken through the entire analytical procedure, including prep and cleanup steps?	X				
Were LCSs analyzed at the required frequency?	X				
Were LCS (and LCSD, if applicable) %Rs within the laboratory QC limits?		X			1
Does the detectability check sample data document the laboratory's capability to detect the COCs at the MDL used to calculate the SDLs?	X				
Was the LCSD RPD within QC limits?	X				
Matrix spike (MS) and matrix spike duplicate (MSD) data					
Were the project/method specified analytes included in the MS and MSD?	X				
Were MS/MSD analyzed at the appropriate frequency?	X				
Were MS (and MSD, if applicable) %Rs within the laboratory QC limits?		X			2
Were MS/MSD RPDs within laboratory QC limits?	X				
Analytical duplicate data					
Were appropriate analytical duplicates analyzed for each matrix?			X		
Were analytical duplicates analyzed at the appropriate frequency?			X		
Were RPDs or relative standard deviations within the laboratory QC limits?			X		
Method quantitation limits (MQLs):					
Are the MQLs for each method analyte included in the laboratory data package?	X				
Do the MQLs correspond to the concentration of the lowest non-zero calibration standard?	X				
Are unadjusted MQLs and DCSs included in the laboratory data package?	X				
Other problems/anomalies					
Are all known problems/anomalies/special conditions noted in this LRC and ER?	X				
Was applicable and available technology used to lower the SDL to minimize the matrix interference effects on the sample results?	X				
Is the laboratory NELAC-accredited under the Texas Laboratory Accreditation Program for the analytes, matrices and methods associated with this laboratory data package?	X				
Initial calibration (ICAL)					
Were response factors and/or relative response factors for each analyte within QC limits?	X				
Were percent RSDs or correlation coefficient criteria met?	X				

Microbac

Texas Risk Reduction Program (TRRP) Checklist

Laboratory Name:	Microbac OVD	**Laboratory Log Number:**	L15111211
Project Name:		**Method:**	8260
Prep Batch Number(s):	548399, 547961	**Reviewer Name:**	Franci Bolden
LRC Date:	2015-12-08 00:00:00		

Was the number of standards recommended in the method used for all analytes?	X				
Were all points generated between the lowest and highest standard used to calculate the curve?	X				
Are ICAL data available for all instruments used?	X				
Has the initial calibration curve been verified using an appropriate second source standard?	X				
Initial and continuing calibration verification (ICCV and CCV) and continuing calibration blank (CCB):					
Was the CCV analyzed at the method-required frequency?	X				
Were percent differences for each analyte within the method-required QC limits?		X			4
Was the ICAL curve verified for each analyte?		X			3
Was the absolute value of the analyte concentration in the inorganic CCB < MDL?			X		
Mass spectral tuning					
Was the appropriate compound for the method used for tuning?	X				
Were ion abundance data within the method-required QC limits?	X				
Internal standards (IS)					
Were IS area counts and retention times within the method-required QC limits?	X				
Raw data (NELAC Section 5.5.10)					
Were the raw data (for example, chromatograms, spectral data) reviewed by an analyst?	X				
Were data associated with manual integrations flagged on the raw data?	X				
Dual column confirmation					
Did dual column confirmation results meet the method-required QC?			X		
Tentatively identified compounds (TICs)					
If TICs were requested, were the mass spectra and TIC data subject to appropriate checks?			X		
Interference Check Sample (ICS) results					
Were percent recoveries within method QC limits?			X		
Serial dilutions, post digestion spikes, and method of standard additions					
Were percent differences, recoveries, and the linearity within the QC limits specified in the method?			X		
Method detection limit (MDL) studies

LRC Date:	2015-12-08 00:00:00		

Was a MDL study performed for each reported analyte?	X				
Is the MDL either adjusted or supported by the analysis of DCSs?	X				
Proficiency test reports					
Was the laboratory's performance acceptable on the applicable proficiency tests or evaluation studies?	X				
Standards documentation					
Are all standards used in the analyses NIST-traceable or obtained from other appropriate sources?	X				
Compound/analyte identification procedures					
Are the procedures for compound/analyte identification documented?	X				
Demonstration of analyst competency (DOC)					
Was DOC conducted consistent with NELAC Chapter 5?	X				
Is documentation of the analyst's competency up-to-date and on file?	X				
Verification/validation documentation for methods (NELAC Chapter 5)					
Are all the methods used to generate the data documented, verified, and validated, where applicable?	X				
Laboratory standard operating procedures (SOPs)					
Are laboratory SOPs current and on file for each method performed	X				

1. Items identified by the letter “R” must be included in the laboratory data package submitted in the TRRP-required report(s). Items identified by the letter “S” should be retained and made available upon request for the appropriate retention period;

2. O = organic analyses; I = inorganic analyses (and general chemistry, when applicable);

3. NA = Not applicable;

4. NR = Not reviewed;

5. ER# = Exception Report identification number (an Exception Report should be completed for an item if “NR” or “No” is checked).

The Exception Report for each “No” or “Not Reviewed (NR)” item in Laboratory Review Checklist and for each analyte, matrix, and method for which the laboratory does not hold NELAC accreditation under the Texas Laboratory Accreditation Program.

Release Statement: I am responsible for the release of this laboratory data package. This laboratory is NELAC accredited under the Texas Laboratory Accreditation Program for all the methods, analytes, and matrices reported in this data package except as noted in the Exception Reports. The data have been reviewed and are technically compliant with the requirements of the methods used, except where noted by the laboratory in the Exception Reports. By my signature

below, I affirm to the best of my knowledge all problems/anomalies observed by the laboratory have been identified in the Laboratory Review Checklist, and no information affecting the quality of the data has been knowingly withheld.

Check, if applicable: [ ] This laboratory meets an exception under 30 TAC §25.6 and was last inspection by [ ] TCEQ or [ ] _____ on **(enter date of last inspection**). Any findings affecting the data in this laboratory data package are noted in the Exception Reports herein. The official signing the cover page of the report in which these data are used is responsible for releasing this data package and is by signature affirming the above release statement is true.

Exceptions Report

1) Carbon disulfide was below the LCL in LCS WG548399-02 analyzed 11/24/15 on HPMS17, however dilution of sample 08 was analyzed for 1,1-dichloroethene only.

2) 1,1-Dichloroethene was below the LCL in the MS/MSD.

3) Carbon disulfide and trichlorofluoromethane were below the LCL in ICV WG546498-12 analyzed 11/11/15 on HPMS17, however dilution of sample 08 was analyzed for 1,1-dichloroethene only.

4) Chloromethane and bromomethane exceeded the UCL in CCV WG547960-02 analyzed 11/21/15 on HPMS8.

Was the LCSD RPD within QC limits?	X				
Matrix spike (MS) and matrix spike duplicate (MSD) data					
Were the project/method specified analytes included in the MS and MSD?			X		
Were MS/MSD analyzed at the appropriate frequency?			X		
Were MS (and MSD, if applicable) %Rs within the laboratory QC limits?			X		
Were MS/MSD RPDs within laboratory QC limits?			X		
Analytical duplicate data					
Were appropriate analytical duplicates analyzed for each matrix?			X		
Were analytical duplicates analyzed at the appropriate frequency?			X		
Were RPDs or relative standard deviations within the laboratory QC limits?			X		
Method quantitation limits (MQLs):					
Are the MQLs for each method analyte included in the laboratory data package?	X				
Do the MQLs correspond to the concentration of the lowest non-zero calibration standard?	X				
Are unadjusted MQLs and DCSs included in the laboratory data package?	X				
Other problems/anomalies					
Are all known problems/anomalies/special conditions noted in this LRC and ER?	X				
Was applicable and available technology used to lower the SDL to minimize the matrix interference effects on the sample results?			X		
Is the laboratory NELAC-accredited under the Texas Laboratory Accreditation Program for the analytes, matrices and methods associated with this laboratory data package?	X				
Initial calibration (ICAL)					
Were response factors and/or relative response factors for each analyte within QC limits?	X				
Were percent RSDs or correlation coefficient criteria met?	X

Texas Risk Reduction Program (TRRP) Checklist

Laboratory Name:	Microbac OVD	**Laboratory Log Number:**	L15111211
Project Name:		**Method:**	9056
Prep Batch Number(s):	WG547890	**Reviewer Name:**	Adriane Steed
LRC Date:	2015-11-20 00:00:00		

Was the number of standards recommended in the method used for all analytes?	X				
Were all points generated between the lowest and highest standard used to calculate the curve?	X				
Are ICAL data available for all instruments used?	X				
Has the initial calibration curve been verified using an appropriate second source standard?	X				
Initial and continuing calibration verification (ICCV and CCV) and continuing calibration blank (CCB):					
Was the CCV analyzed at the method-required frequency?	X				
Were percent differences for each analyte within the method-required QC limits?	X				
Was the ICAL curve verified for each analyte?	X				
Was the absolute value of the analyte concentration in the inorganic CCB < MDL?	X				
Mass spectral tuning					
Was the appropriate compound for the method used for tuning?			X		
Were ion abundance data within the method-required QC limits?			X		
Internal standards (IS)					
Were IS area counts and retention times within the method-required QC limits?			X		
Raw data (NELAC Section 5.5.10)					
Were the raw data (for example, chromatograms, spectral data) reviewed by an analyst?	X				
Were data associated with manual integrations flagged on the raw data?			X		
Dual column confirmation					
Did dual column confirmation results meet the method-required QC?			X		
Tentatively identified compounds (TICs)					
If TICs were requested, were the mass spectra and TIC data subject to appropriate checks?			X		
Interference Check Sample (ICS) results					
Were percent recoveries within method QC limits?			X		
Serial dilutions, post digestion spikes, and method of standard additions					
Were percent differences, recoveries, and the linearity within the QC limits specified in the method?	X				
Method detection limit (MDL) studies

below, I affirm to the best of my knowledge all problems/anomalies observed by the laboratory have been identified in the Laboratory Review Checklist, and no information affecting the quality of the data has been knowingly withheld.

Check, if applicable: [ ] This laboratory meets an exception under 30 TAC §25.6 and was last inspection by [ ] TCEQ or [ ] _____ on **(enter date of last inspection**). Any findings affecting the data in this laboratory data package are noted in the Exception Reports herein. The official signing the cover page of the report in which these data are used is responsible for releasing this data package and is by signature affirming the above release statement is true.

Exceptions Report

1. Fractions -15 and -16 were analyzed at dilutions only due to their high analyte concentrations (Cl and/or SO4) which were over 200 ppm. Any sample that has a single anion load greater than 200 ppm (or a total anion load greater than 400 ppm) will be diluted in order to prevent damage to the IC from repeated overloading of the analytical column and oversaturation of the suppressor membranes.

	R1	Field chain-of-custody documentation;
	R2	Sample identification cross-reference;
	R3	Test reports (analytical data sheets) for each environmental sample that includes: (a) Items consistent with NELAC Chapter 5, (b) dilution factors, (c) preparation methods, (d) cleanup methods, and (e) a.if required for the project, tentatively identified compounds (TICs).
	R4	Surrogate recovery data including: (a) Calculated recovery (%R), and (b) the laboratory's surrogate QC limits.
	R5	Test reports/summary forms for blank samples;
	R6	Test reports/summary forms for laboratory control samples (LCSs) including: (a) LCS spiking amounts, (b) calculated %R for each analyte, and (c) the laboratory's LCS QC limits.
	R7	Test reports for project matrix spike/matrix spike duplicates (MS/MSDs) including: (a) samples associated with the MS/MSD clearly identified, (b) MS/MSD spiking compounds, (c) concentration of each MS/MSD analyte measured in the parent and spiked samples, (d) calculated %Rs and relative percent differences (RPDs), and (e) the laboratory's MS/MSD QC limits.
	R8	Laboratory analytical duplicate (if applicable) recovery and precision: (a) the amount of analyte measured in the duplicate, (b) the calculated RPD, and (c) the laboratory's QC limits for analytical duplicates.
	R9	List of method quantitation limits (MQLs) and detectability check sample results for each analyte for each method and matrix.
	R10	Other problems or anomalies.

LRC Date:	2015-11-30 00:00:00		

Description	Yes	No	NA	NR	ER#
Chain-of-custody (C-O-C)					
Did samples meet the laboratory's standard conditions of sample acceptability upon receipt?	X				
Were all departures from standard conditions described in an exception report?	X				
Sample and quality control (QC) identification					
Are all field sample ID numbers cross-referenced to the laboratory ID numbers?	X				
Are all laboratory ID numbers cross-referenced to the corresponding QC data?	X				
Test reports					
Were all samples prepared and analyzed within holding times?	X				
Other than those results < MQL, were all other raw values bracketed by calibration standards?	X				
Were calculations checked by a peer or supervisor?	X				
Were all analyte identifications checked by a peer or supervisor?	X				
Were sample detection limits reported for all analytes not detected?	X				
Were all results for soil and sediment samples reported on a dry weight basis?	X				
Were % moisture (or solids) reported for all soil and sediment samples?	X				
Were bulk soils/solids samples for volatile analysis extracted with methanol per SW846 Method 5035?			X		
If required for the project, are TICs reported?			X		
Surrogate recovery data					
Were surrogates added prior to extraction?			X		
Were surrogate percent recoveries in all samples within the laboratory QC limits?			X		
Test reports/summary forms for blank samples					
Were appropriate type(s) of blanks analyzed?	X				
Were blanks analyzed at the appropriate frequency?	X				
Were method blanks taken through the entire analytical process, including preparation and, if applicable, cleanup procedures?	X				
Were blank concentrations < MQL?	X				
Laboratory control samples (LCS):	X				
Were all COCs included in the LCS?	X				

Microbac

Texas Risk Reduction Program (TRRP) Checklist

Laboratory Name:	Microbac OVD	**Laboratory Log Number:**	L15111211
Project Name:		**Method:**	TOC
Prep Batch Number(s):	WG548214, WG548464	**Reviewer Name:**	Deanna Hesson
LRC Date:	2015-11-30 00:00:00		

Was each LCS taken through the entire analytical procedure, including prep and cleanup steps?	X				
Were LCSs analyzed at the required frequency?	X				
Were LCS (and LCSD, if applicable) %Rs within the laboratory QC limits?	X				
Does the detectability check sample data document the laboratory's capability to detect the COCs at the MDL used to calculate the SDLs?	X				
Was the LCSD RPD within QC limits?	X				
Matrix spike (MS) and matrix spike duplicate (MSD) data					
Were the project/method specified analytes included in the MS and MSD?	X				
Were MS/MSD analyzed at the appropriate frequency?	X				
Were MS (and MSD, if applicable) %Rs within the laboratory QC limits?	X				
Were MS/MSD RPDs within laboratory QC limits?	X				
Analytical duplicate data					
Were appropriate analytical duplicates analyzed for each matrix?	X				
Were analytical duplicates analyzed at the appropriate frequency?	X				
Were RPDs or relative standard deviations within the laboratory QC limits?	X				
Method quantitation limits (MQLs):					
Are the MQLs for each method analyte included in the laboratory data package?	X				
Do the MQLs correspond to the concentration of the lowest non-zero calibration standard?	X				
Are unadjusted MQLs and DCSs included in the laboratory data package?	X				
Other problems/anomalies					
Are all known problems/anomalies/special conditions noted in this LRC and ER?	X				
Was applicable and available technology used to lower the SDL to minimize the matrix interference effects on the sample results?			X		
Is the laboratory NELAC-accredited under the Texas Laboratory Accreditation Program for the analytes, matrices and methods associated with this laboratory data package?	X				
Initial calibration (ICAL)					
Were response factors and/or relative response factors for each analyte within QC limits?	X				
Were percent RSDs or correlation coefficient criteria met?	X				

Microbac

Texas Risk Reduction Program (TRRP) Checklist

Laboratory Name:	Microbac OVD	**Laboratory Log Number:**	L15111211
Project Name:		**Method:**	TOC
Prep Batch Number(s):	WG548214, WG548464	**Reviewer Name:**	Deanna Hesson
LRC Date:	2015-11-30 00:00:00		

Was the number of standards recommended in the method used for all analytes?	X				
Were all points generated between the lowest and highest standard used to calculate the curve?	X				
Are ICAL data available for all instruments used?	X				
Has the initial calibration curve been verified using an appropriate second source standard?	X				
Initial and continuing calibration verification (ICCV and CCV) and continuing calibration blank (CCB):					
Was the CCV analyzed at the method-required frequency?	X				
Were percent differences for each analyte within the method-required QC limits?	X				
Was the ICAL curve verified for each analyte?	X				
Was the absolute value of the analyte concentration in the inorganic CCB < MDL?	X				
Mass spectral tuning					
Was the appropriate compound for the method used for tuning?			X		
Were ion abundance data within the method-required QC limits?			X		
Internal standards (IS)					
Were IS area counts and retention times within the method-required QC limits?			X		
Raw data (NELAC Section 5.5.10)			X		
Were the raw data (for example, chromatograms, spectral data) reviewed by an analyst?	X				
Were data associated with manual integrations flagged on the raw data?			X		
Dual column confirmation					
Did dual column confirmation results meet the method-required QC?			X		
Tentatively identified compounds (TICs)			X		
If TICs were requested, were the mass spectra and TIC data subject to appropriate checks?			X		
Interference Check Sample (ICS) results					
Were percent recoveries within method QC limits?			X		
Serial dilutions, post digestion spikes, and method of standard additions			X		
Were percent differences, recoveries, and the linearity within the QC limits specified in the method?			X		
Method detection limit (MDL) studies					

Microbac

Texas Risk Reduction Program (TRRP) Checklist

Laboratory Name:	Microbac OVD	**Laboratory Log Number:**	L15111211
Project Name:		**Method:**	TOC
Prep Batch Number(s):	WG548214, WG548464	**Reviewer Name:**	Deanna Hesson
LRC Date:	2015-11-30 00:00:00		

Was a MDL study performed for each reported analyte?	X				
Is the MDL either adjusted or supported by the analysis of DCSs?	X				
Proficiency test reports					
Was the laboratory's performance acceptable on the applicable proficiency tests or evaluation studies?	X				
Standards documentation					
Are all standards used in the analyses NIST-traceable or obtained from other appropriate sources?	X				
Compound/analyte identification procedures					
Are the procedures for compound/analyte identification documented?	X				
Demonstration of analyst competency (DOC)					
Was DOC conducted consistent with NELAC Chapter 5?	X				
Is documentation of the analyst's competency up-to-date and on file?	X				
Verification/validation documentation for methods (NELAC Chapter 5)	X				
Are all the methods used to generate the data documented, verified, and validated, where applicable?	X				
Laboratory standard operating procedures (SOPs)					
Are laboratory SOPs current and on file for each method performed	X				

1. Items identified by the letter “R” must be included in the laboratory data package submitted in the TRRP-required report(s). Items identified by the letter “S” should be retained and made available upon request for the appropriate retention period;

2. O = organic analyses; I = inorganic analyses (and general chemistry, when applicable);

3. NA = Not applicable;

4. NR = Not reviewed;

5. ER# = Exception Report identification number (an Exception Report should be completed for an item if “NR” or “No” is checked).

The Exception Report for each “No” or “Not Reviewed (NR)” item in Laboratory Review Checklist and for each analyte, matrix, and method for which the laboratory does not hold NELAC accreditation under the Texas Laboratory Accreditation Program.

Release Statement: I am responsible for the release of this laboratory data package. This laboratory is NELAC accredited under the Texas Laboratory Accreditation Program for all the methods, analytes, and matrices reported in this data package except as noted in the Exception Reports. The data have been reviewed and are technically compliant with

Texas Risk Reduction Program (TRRP) Checklist

Laboratory Name:	Microbac OVD	**Laboratory Log Number:**	L15111211
